PHY	371	Driving Forces in Biology	What are the stable states of biomolecules? How do molecules interact? What forces drive molecules to bond and associate, to adsorb, to permeate through membranes, to undergo chemical reactions, to undergo conformational changes? Why are some changes gradual, as in the weakening of a ligand interaction with temperature, and others sudden (cooperative) such as protein folding or the insolubility of oil in water? Addresses these questions by statistical thermodynamics, a collection of principles and models that when combined with thermodynamics, aim to explain molecular forces and flows.	N	LEC	N	OPT	The College of Liberal Arts and Sciences	Department of Physics	3		Prerequisite(s): CHM 346

N	LEC	N	GNA	College of Health Solutions	College of Health Solutions	3		Prerequisite(s): degree- or nondegree-seeking graduate student
POP	610	Social Epidemiology	Social epidemiology considers how society's human activities and social interactions yield differential exposures that result in health disparities, including the identification of new disease-specific risk factors (e.g., social determinants of health) and how well-known exposures (e.g., cigarette smoking, lead paint, health insurance) emerge and are maintained by the social system. Considers dynamic social relationships and human activities that ultimately locate industries that pollute one neighborhood instead of another, make fresh foods available to some and not others, and permit some to enjoy resources such that they can purchase healthy environments and excellent health care. POS	475	Morality and Politics	Should morality play a role in politics? Machiavelli gives us one sort of answer, urging politicians to be dishonest, deceptive and even cruel. Kant disagrees, arguing instead that politicians should adhere to their personal morality over political calculations. Explores this question in two ways. First, looks more at the disagreement between great thinkers in the Western political tradition. Second, investigates contemporary political actors who bring moral concerns to the fore, including dirty politicians and extremist citizens (for example, radical animal rights activists, militant environmentalists or global poverty zealots). REL	338	Daode Jing: Way to the West	At 5,000 words, the Daode Jing [Tao-te ching, "the Scripture of the Way and its Powers," attributed to the Sage Laozi] is perhaps the shortest religious book in the world. It is also the most widely misinterpreted. In China, Daoists, Buddhists and Confucians have each taken its short, pithy statements as warrant for their very different belief systems. In the West, missionaries, new-age pundits, hippies, rock-stars, mystics and LSD advocates each claim to understand the "true meaning" of Laozi's mystical words. But "the farther one travels, the less one knows..." Students read representative samples of these explanations to understand why this brief book of wisdom has endured for over 2000 years. Requires no knowledge of Chinese. Presents all Chinese texts in the translations of the instructor. ROM	442	Dracula and Vampire Lore	Vampire stories are not only local phenomena placed in Transylvania, as the common stereotype is incessantly spread. Legends about Dracula and the Count himself may be "untrue," but events that took place during the life and reign of the Wallachian Voevode Vlad Tepes, better known as Vlad the Impaler, are nonfictional. He ruled during the time of the Ottoman Empire extension to Europe and his fight against the Turks give us thought on the altered understanding of Vlad as a vampire figure. Occurring and recurring in continuously changed environments, Count Dracula affects everyone to the same degree, but still remains as secret and elusive as before, pitted against a vision of mysterious spaces that evoke the faraway castles from Whitby, UK (the origin of Stoker's Dracula), from Bran and Poenari Castles in Transylvania as well as the visions of Jules Verne's Castle of the Carpathians. Examines the Russian roots of Nabokov's Russian (in translation) and American novels about exile: his first novel, Mary (1926), The Defense (1929), Glory (1932), and his tribute to 19th-century Russian literature, The Gift (1938), which he considered his greatest Russian novel. These are followed by Lolita (1955), Pnin (1957) and Pale Fire (1962), his memoirs, Speak, Memory (1966), and some essays and short stories. Films include Lolita by Stanley Kubrick (1962) and Adrian Lyne (1997). Explores urban inequalities of slums and dreamworlds; compares vernacular and transnational styles of urbanism (in architecture, design, markets, consumerism, jobs, ads, ways of living); and asks how transnational flows of people, capital and culture have reconfigured ethnic relations and national identities rooted in global cities. Students become virtual transnational flâneurs, tacking between the slums and skyscrapers of global cities, and conduct guided research on a global megacity to investigate how the production of the global city changes the lived space and urban culture of local residents, and how they respond. We ask, whose city is it? Examines solar energy technology, economic issues and policy matters and reviews the impact of these three areas on the design process and system operation of photovoltaic systems at the residential and commercial scales. Objectives include learning the basic principles in photovoltaic system design; thinking critically and seriously about the nature of solar energy and its use; formulating views and insights regarding energy resources, conservation, photovoltaic economics, government subsidies; and expressing and defending these views orally and in writing. Includes lectures, case studies, interactive classroom projects and guest speakers.	N	LEC	N	OPT	Ira A. The course educational Objectives include: learning the principles in utility-scale photovoltaic system design; thinking critically and seriously about the interaction of photovoltaic systems with the national grid; formulating views and insights regarding energy resources, conservation, economics, government incentives, and so on, at the utility scale; and expressing and defending these views orally and in writing. SES	121	Earth, Solar System & Universe	The Earth, solar system and universe are diverse and dynamic, featuring galaxies, solar systems, suns, planets and moons. Each type of feature is characterized by a suite of processes and features, such as volcanoes, landslides and climate. As scientists and engineers, we want to understand what is going on in our world. Understanding past events helps begin to predict future events. With the Earth, we examine past events and current natural processes to understand how this past and these processes affect humans. Accordingly, this course examines the processes, materials and features observed and inferred on the Earth, in the Solar System, and in the Universe. The course is purposely designed to be rather holistic, exploring concepts from stellar evolution, atmosphere and oceans on Earth and in extraterrestrial objects, plate tectonics, volcanoes and mountain building. Both SES 121 and SES 123 must be taken together to secure SQ General Studies credit.	N	LEC	N	OPT	The College of Liberal Arts and Sciences	School of Earth and Space Exploration	3	SQ	
SES	122	History of Earth&Solar System	The Earth and solar system have a long and interesting history, spanning nearly five billion years. Earth and other objects in the solar system have evolved over time, punctuated by a series of events, such as mountain building, volcanic eruptions, impacts and extinctions. As scientists and engineers, we want to understand what events have occurred in our world and which aspects directly affect us or are most interesting. Understanding past events helps us comprehend what has happened and begin to predict future events. With the Earth, examines past events and current natural processes to understand how this past and these processes affect humans. Accordingly, examines the history of the Earth and solar system in the context of the processes, materials and features that can be observed and inferred. Explores the history of the Earth and solar system from a broad, interdisciplinary, perspective.	N	LEC	N	OPT	The College of Liberal Arts and Sciences	School of Earth and Space Exploration	3		Prerequisite(s): SES 121 with C or better
SES	123	Earth,Solar Sys & Universe Lab	Studies astronomical and geological processes through observations and measurements. Requires field trips and evening telescopic observing. Both SES 121 and SES 123 must be taken together to secure SQ General Studies credit. SES	126	Exploration of the Universe	Introduces the basic principles of modern astronomy, with a focus on "Exploration Science," or the methods by which we explore our planet, our solar system, other stars, and even other galaxies. How do we explore? What is the "scientific method"? How is modern science carried out? Study of such questions helps form a solid foundational core for a major in the science of astrophysics--a major that spans many aspects of the universe as a whole. Don't be surprised if class includes stories about how ASU research is proceeding, or how a lesson in class is relevant to some research experience. A key goal is for you to be excited and informed about the incredible era of Earth and space exploration that we're all a part of!	N	LEC	N	OPT	The College of Liberal Arts and Sciences	School of Earth and Space Exploration	3		Prerequisite(s): SES 121 with C or better; Pre- or corequisite(s): MAT 170, 171, 210, 251, 265, or 270 with C or better if completed

SES	141	Energy in Everyday Life	Energy permeates our everyday life and is at the heart of understanding how the world around us works. What is energy? How is energy used in the biological, chemical, electrical and mechanical systems that impact our daily lives? What would our world be like if there was a nearly infinite supply of inexpensive energy? This multidisciplinary survey course offers learners the opportunity to master practical job skills: the ability to observe, gather data, and think critically to make order-of-magnitude estimates. SGS	361	World Society	Studies global processes by conceptualizing the world as a world society. This means that globalization is not just people being more interconnected enabling faster interactions. It suggests that interactions and institutions throughout the world are increasingly part of a whole, of a global consciousness, and while boundaries such as national boundaries are important, they do not delimit "society." The global is not just what is outside of national society or beyond the nation-state; it also constitutes what is inside the nation-state.	N	LEC	N	GNA	The College of Liberal Arts and Sciences	School of Politics and Global Studies	3		Prerequisite(s): minimum 45 hours; Credit is allowed for only SGS 361 or SGS 394 (World Society)

SGS	370	Geopolitics	Geopolitics is a field that deals with war, conflict and the politics of animosity and violence. It calls special attention to the distribution of power on a global scale, and to the spatial scales at which power, authority and control operate. At one time, this involved studying how various "great powers" and "wise men" carved up the world according to their goals and interests. But power is everywhere! To name only a few examples, it is present in the ways that NGOs operate in conflict zones, in global health advocacy and awareness, in media coverage of distant catastrophes and seemingly immanent risks, and in disaster management and emergency response plans. Scholars in this field study topics such as war, diplomacy, conflict, migration, religious strife, terrorism and similar fields. SLC	358	Saving the Roman Empire	In his autobiographical epitaph, the Res Gestae, Augustus, founder of the Roman Empire, claimed to have restored Rome to her former glory. His moral, social and political reforms solidified Roman control of the world and the imperial family's hold on ruling her. Through the next five hundred years, as the power of the empire waned and waxed, Augustus's successors turned time and again to reforming the empire and restoring her to her former glory - to saving the Roman Empire. In doing so they had to deal with problems both external and internal; sometimes their ideas worked, often they did not. Ultimately they failed, and Rome and the western empire fell in CE 476. Examines the rise, decline and fall of the Roman Empire from the perspective of internal and external problems the Empire faced, and asks which reforms worked, which did not work, and why. What could have been done differently? Should anything have been done differently, or was the western Roman Empire always doomed? SOC	455	Human Rights & Sustainability	Addresses the connections between human rights and environmental sustainability. Legal and scholarly approaches linking these areas present new perspectives for addressing some of the greatest challenges of our time, given the important resource dimensions of economic and social rights and the human dimensions of sustainability. Yet human rights demands and environmental concerns are not always in harmony. Explores these tensions and opportunities by examining three substantive areas: urban ecology and human rights, the human right to food, and the human rights implications of extractive industries such as oil and mining. Following an introduction to the key concepts of human rights and sustainability, explores the substantive areas through theoretical and empirical readings on each; grassroots accounts of struggles over environment-related human rights; and selections from literature and film that illustrate the environmental justice issues at stake. SOS	374	Earth's Critical Zone	The Earth's near surface environment (the "critical zone") supports most life and is the dynamic interface between the solid Earth and its fluid envelopes where much of the geologic record is produced. We now know that we face rapid climate change and the consequences of changes in land use, water resources, and ecosystems. Critical to planning a response to, or mitigation of, environmental change is understanding how the Earth surface works. Focuses on how changes to the environment manifest themselves in the critical zone--in the form and function of the Earth's surface (landforms, water resources, soils, ecosystems). Offers a quantitative introduction to the form and function of the processes impacting the Earth's critical zone to build an understanding of the interactions of physical, chemical and biotic processes in shaping the surface and determining fluid, solute and sediment fluxes. As hazards roll into disasters they lay bare the underlying conditions of socio-ecological vulnerability and inequities that affect almost all aspects of daily life. They also affect the infrastructures and institutions supporting daily life. This realization stimulates improvisation and ideas for just, green, inclusive and resilient futures. Investigates case studies to reconstruct how people, affected by and surviving a disaster, advanced sustainability transitions and reduced disaster risk. Uses an interdisciplinary perspective to analyze these transitions, drawing on theories of change from sustainability transitions and transformation as well as disaster management research. Moreover, students ground the literature in concrete experiences as shared through guest speakers, professional experiences, documentaries and an applied project. TGM	204	Princip of Mrktng/Global Orgs	Explores the ways in which global marketing strategies reflect a deep understanding of markets and create valuable offerings for customers globally. Broadly speaking, marketing strategy making is comprised of segmentation, targeting and positioning. Targeting is the process by which we analyze opportunities and identify those customers where our business has the greatest prospects for success. Positioning is the process of assembling the "total offering" (product, service, distribution and price) and communicating the benefits of this "total offering" to the members of our target market. Challenges students to think critically about global competition. As such, rote learning of terms and concepts is not sufficient to prepare students to manage a business in global markets. TGM	549	Global Leadership	Explores the concept of effective leadership within and across a variety of organizations and global contexts. Definitions of "leadership" and strategies for becoming an accomplished leader abound. Rather than attempt to narrowly focus our attention on definitions, leadership styles, and supposedly "definitive" theories of leadership, focuses on the demands of and competencies associated with excellent leadership. Most importantly, examines how leaders sense the need for and then manage organizational change. Given the increasingly complex world we live in and the ongoing and rapid rate of change, change management has become one of the most critical of leadership skills. Equips students with a comprehensive understanding of how and why consumers make decisions the way they do in the market (B2C). Although consumers desire to make rational decisions that maximize their utility, in reality, more often than not, they tend to make irrational and suboptimal choices. Offers why such phenomena occur and how consumers can improve their quality of decision making. Offers a richer appreciation of the heuristics and decision-making rules that consumers use and biases that affect consumer decision making. TGM	556	Gbl Strat Services Mkt	Services have come to dominate our economy. Yet there remains a naïve belief that services marketing and management is a simple adaptation of goods marketing and management. Unlike physical goods, services are co-produced with customers at a time, and in a place, of the customer's choosing. This co-production directly involves an organization's front-line employees. As a result, it is more difficult for services to be inventoried and checked for quality assurance. Provides a thorough understanding of the management and continuous improvement of service operations, including a thorough understanding of the role of customers in service operations such that service firms can design effective service experience so as to minimize service failure. Provides students with an end-to-end hands-on customer experience management (e.g., customer satisfaction and loyalty), project that involves survey design, customer experience model development, data collection, data analysis, and recommendations. TGM	559	GBL Brand Management	Provides a managerial orientation to the topic of global brand management. Emphasizes the ethical dimension of global brand management; focuses on an individual brand ethics project. Takes its theoretical framework from a radical 1960s manifesto called SCUM Manifesto by Valerie Solanas and from the French feminist philosophies of Julia Kristeva, who theorized the abject as a relationship with the grotesque that reveals the deep-seated fear of death. Uses these theoretical positions to examine trash, both abstractly and literally. Works through a variety of concepts ranging from actual trash, garbage, waste, toxic sludge, pollution and dirt, and tackles more abstract notions of trash such as the knowledge produced on the fringe in circuses, amusement parks, "trailer trash" zones, freak shows and the bodies of those marked as "Other" or different. Considers the articulations and contestations of diverse masculinities as expressed through gender, race, sex, ethnicity, sexuality, kinship, politics, popular culture, economics, nationalism, science and medicine, and violence. Also looks at the ways in which (or indeed, whether) academic discourses have anything useful to say about the worlds in which we live. Among the questions we'll need to have constantly in our minds are: In what ways has feminist theorizing changed over time? Does transnational feminist theory challenge or even undermine previous feminist theoretical discussions or the perspectives you might be familiar with from your undergraduate days? What kinds of engagements do our authors have with theorists in other areas (queer studies, postcolonial studies, critical race theory)? WWS	460	World War II	Explores the causes, conduct and consequences of World War II. When did World War II start? How was it fought, and what did that mean for soldiers, the homefront and millions of civilians in Japanese or German occupied regions? What did the world that emerged in its wake look like? The course explores these fundamental questions with an emphasis on multiple explanations of the causes of the war in Asia and Europe and the contingency of Allied victory. Explores the war as both a total and a global war in which perceptions of race, class and gender shaped the experience of combatants and noncombatants, many of whom died in indiscriminate bombing campaigns. Racial ideologies also led to the brutalization of soldiers, which in turn fueled the violence against civilians, as exemplified by the Holocaust and Japanese war crimes. Finally, the course turns to the global order emerging after the war and the different narratives that emerged from it. WWS	563	The Lived Experience of WWII	Using the vast oral history collection of the National World War II Museum in New Orleans, Louisiana, this course examines how individuals experienced the war. A number of factors shaped how people experienced the war—whether one was a soldier, non-combatant, resistor or collaborator. Focuses on how ordinary people made sense of their experiences during the war. In addition, students explore the theory and practice of collecting and using oral histories. WWS	566	World War II Today	Analyzes the impact and legacy of World War II, with an emphasis on the roots of contemporary problems and issues. A global conflict that impacted millions of people, World War II fundamentally reshaped the political and cultural landscape of our planet. Explores the new global order that emerged after the end of World War II in 1945. While the war had immediate impacts in the postwar era, the legacy of the war continues to inform current conflicts across the globe and resonates in the current social and political order. This is especially apparent in how contemporary narratives situate, remember and memorialize the war. Uses themes to help us think historically and uncover the historical roots of the present order.
