EPA	555	Translating Rsrch for Ed Chang	Teaches educators how to translate research to promote educational change in their schools and districts. Three concepts emerge to empower practitioners to translate research to their individual schools and communities: (1) a needs assessment to understand the context (student population, community, networks); (2) an emphasis on the generalizability of research to provide an understanding of which findings are most applicable to specific contexts at which times and under which conditions; and (3) explicit training on ways of knowing to encourage practitioners to develop their own theoretical perspectives and test them against the academic research. Takes its theoretical framework from a radical 1960s manifesto called SCUM Manifesto by Valerie Solanas and from the French feminist philosophies of Julia Kristeva, who theorized the abject as a relationship with the grotesque that reveals the deep-seated fear of death. Uses these theoretical positions to examine trash, both abstractly and literally. Works through a variety of concepts ranging from actual trash, garbage, waste, toxic sludge, pollution and dirt, and tackles more abstract notions of trash such as the knowledge produced on the fringe in circuses, amusement parks, "trailer trash" zones, freak shows and the bodies of those marked as "Other" or different. FIS	201	Innovation in Society	Examines the vast implications of innovation, why it is so powerful, and why it really matters. Introduces the theories and processes of innovation as they relate to socio-political change. Students gain knowledge about the history and future of innovation and explore how innovation is entangled with social, political and ethical issues. By identifying and applying analytical tools, students learn to account for the diverse workings and effects of innovation. This course strives to debunk the myth that innovation happens automatically. Rather, different actors rally to create innovations that shape our society, economy and cultures--and that those innovations are not inevitable and could be otherwise.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3	H	
FIS	294	Special Topics	Covers topics of immediate or special interest to a faculty member and students.	Y	LEC	Y	OPT	College of Global Futures	School for the Future of Innovation in Society	1-4		
FIS	305	Ways of Knowing	Students research, beginning with the concept of research itself and its various purposes, highlighting knowledge and how it is created in different disciplinary approaches. Exposes historical and philosophical underpinnings of how research is conceptualized, presented and implemented, including what constitutes information, knowledge and evidence. Introduces material that is in a traditional research design and methodology course; however, the emphasis uniquely focuses on knowledge creation, innovation, the nature of disciplinary knowledge and its impact on society. Explores the epistemological differences in problem identification and approaches to inquiry in the disciplinary perspectives of engineering, the sciences and in the social sciences.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3	L	Prerequisite(s): minimum 45 hours
FIS	307	Navigating Futures	Foresight methods and their potentials as entry-points into public discussions about near- and mid-range technoscientific developments. Four elements constitute the organizing axis of the course: (1) the history of foresight exercises in government agencies and business organizations; (2) the methods of four forms of foresight exercises (technology foresight, science and technology studies, anticipatory governance and scenario development); (3) a comparative assessment of these dominant forms; and (4) a group-based application exercise using one of the foresight methods.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3	SB	Prerequisite(s): minimum 45 hours OR Visiting University Student
FIS	308	Politics, Markets, and Innovat	Studies the roles that governments, markets and other factors play in promoting, disseminating and regulating science-based technological innovation. Includes examining the theoretical literature on factors that structure markets and shape diffusion, as well as case studies that illustrate the processes and mechanisms that govern innovations in society. In addition to studying the role of governments, firms and universities, also considers the role of publics as consumers who adopt innovations but also as citizens who may be skeptical of them. Includes case studies in agriculture, health care, biotechnology and digital rights.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3	SB	Prerequisite(s): minimum 45 hours OR Visiting University Student
FIS	331	Technology and the Modern Worl	Explores how technological systems are developed and embedded in the modern world with an eye to playing a role in creating better futures. Examines how machines and techniques can shape institutions, relationships and values. Challenges students to envision futures that they want and work to develop strategies for moving us (and our systems) toward those futures. Analyzes technologies past, present and imagined, and describes the ways in which technologies shape our world and the ways in which we shape those technologies. Through repeated practice in class students play a productive role in and even facilitate conversations that tease out the relationships between values and technological systems. FIS	332	Risk and the Future	Examines the evolving global risk landscape that is resulting from rapidly increasing global connectivity, tight coupling and massive complexity. Develops an understanding of how innovation in society is changing the risk landscape and considers how innovation in approaches to risk can help navigate this emerging landscape. Topics include technological risk, sociopolitical risk, catastrophic risk, existential risk, converging technologies, perception and uncertainty, anticipation, precaution, uncertainty and risk innovation.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3	L	Prerequisite(s): minimum 45 hours
FIS	334	Science, Tech, & Inequality	Conceptual and theoretical frameworks; provides empirical case studies that contribute to understandings of science and technology as they are used in society. The applications of science and technology in society need to be understood as instrumental to the creation and maintenance of inequality within and between societies. Science and technology does not merely cause or alleviate inequality, but are more profoundly implicated in social relations regarding distribution and access to the benefits of different technologies as well as exposure to risks from science and technology projects in society. The more pervasive and obdurate sources of social distribution are enshrined and entrenched in these scientific and technological systems.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3	C	Prerequisite(s): minimum 45 hours; Credit is allowed for only FIS 334 or JUS 334
FIS	335	Designing Knowledge	Provides a foundational understanding of how social organizations make and use knowledge. From research laboratories to biotechnology companies to statistical agencies, many organizations are specifically designed to be knowledge enterprises, enterprises whose primary purpose is to produce knowledge. All organizations in modern societies also operate knowledge systems: systems whose purpose is to create, validate, circulate, communicate and apply knowledge in the making of decisions. Examines how these forms of organization work and contribute to modern societies.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3	SB	Prerequisite(s): minimum 45 hours OR Visiting University Student
FIS	336	Science and Technology Policy	Science and technology are powerful forces in the modern world. They have been hailed as a way to address everything from world hunger to old age. This does not, however, happen automatically, nor does it always work out the way one presumes. Governments make numerous decisions that affect the direction and application of science and technology, and government policies are affected by a myriad of social, political, and cultural factors. This class will explore the variety of ways in which governments make these policies, how the policies shape the development of science and technology and their applications, and how policy may be shaped to create better futures. Governments around the world have coalesced around the idea that science and technology are necessary for the promotion of the good life. We will examine how they put this idea into action by looking at five interrelated topics: Food, Security/Military, Health, Economy, and Sustainability.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3		
FIS	337	Innovation and Global Developm	Persistent inequality and poverty continue to plague nations including the USA even in the 21st century. Global development is a complex idea that attempts to address interrelated paradigms of culture, economy, equity, governance, history, societal dynamics, as well as technological issues. Using the framework of the Sustainable Development Goals 2030 (SDGs) this course examines, analyzes and critiques indicators of SDGs as well as explores innovative measures of development that nations around the world are planning and implementing in order to improve the lives of their citizens now and for the future.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3	G	Prerequisite(s): minimum 45 hours OR Visiting University Student

The overall goal is to create an awareness of and ability to analyze and synthesize world events, the particular role of technology, and consider the myriad ways that globalization and technology as a main driver could be changing the international system of nation-states. Technological innovation often takes place within a political context, including international politics, as nation-states and other entities develop technologies within the context of competition and power. There are several issues that run throughout the course as major themes. One is the role of technology in political and social change, and the impact of the latter on the former. FIS	432	Prob Solving-StrategicThinking	Students learn how to ask questions, brainstorm and communicate ideas, while dealing with uncertain outcomes and unpredictable risks caused by the ideas and solutions they propose. In understanding which ideas and solutions stick and which don't, students learn how different factors influence the birth, life and death of ideas and the socio-technical systems in which ideation exists. Does it matter who asks the questions and proposes the ideas, who is trying to participate, who was there first, if there is a profit or other conflicting motive and the context and the interests that result in certain solutions being picked over others? This course uses exploration learning approaches, where students follow a progression through what they discover, from understanding who they are as individuals, to how ideas are formed and hypothesis made about proposed solutions. Since the Six Day War, 1967, and the political change in 1977, Israeli society is split in attitude toward war. The absolute belief in the political and military leaders was shaken, and new political agendas entered the political arena. GLG	327	Earth's Critical Zone	The Earth's near surface environment (the "critical zone") supports most life and is the dynamic interface between the solid Earth and its fluid envelopes where much of the geologic record is produced. We now know that we face rapid climate change and the consequences of changes in land use, water resources, and ecosystems. Critical to planning a response to, or mitigation of, environmental change is understanding how the Earth surface works. Focuses on how changes to the environment manifest themselves in the critical zone—in the form and function of the Earth's surface (landforms, water resources, soils, ecosystems). Offers a quantitative introduction to the form and function of the processes impacting the Earth's critical zone to build an understanding of the interactions of physical, chemical and biotic processes in shaping the surface and determining fluid, solute and sediment fluxes. GTD	511	Development Policy & Practices	Since the Bretton Woods Agreements in 1944, enormous energy has been devoted to generating the right tools for global development policy. Yet, little attention is given to the relationship between these tools, the practice of development and actual outcomes. At best, it is understood as a "gap" between the theory of development policy and practices. There is no reflection on what the good development policy looks like or what collective learning we have thus far. Informs students on the complexity of policy making and its relationship to development practices through time. Creates an intellectual space to discuss the practices of global development; uses case studies to enhance students' creativity and skill needed in managing and negotiating critical development challenges. Approaches development policy (models, strategies and project design) primarily as a tool to legitimize power relation rather than to orient practice for desired development outcomes. HCD	567	Curr Challenges Infectious Dis	Throughout history new pathogens such as HIV, SARS and pandemic influenza have emerged to challenge human populations. This course will introduce you to the challenges of controlling or managing infectious diseases through an appreciation of key factors such as differing modes of transmission, the impact of travel and behavior on transmission, the importance of surveillance in achieving disease prevention and control, key steps in outbreak investigation and current disease control and management strategies. Dengue fever, hepatitis A virus, HIV, influenza, measles, meningococcal meningitis, rota virus, SARS and TB will be used to learn about preparing for and containing diseases with potentially catastrophic impact to the health and economic stability. This course supports you achieving a range of capabilities that you will need if you are planning to have a career in epidemiology and infectious disease control. HCD	577	Infection Prevention in Hlthcr	Antimicrobial resistance is an urgent global health priority. In the near future common treatable infections may become untreatable. Currently 1 out of 20 hospitalised patients contracts a health care associated infection, of which around 50% are preventable. These infections add to the functional disability and emotional stress of the patient and in some cases, lead to disabling conditions that reduce their quality of life. In addition, they contribute to increased hospital stays and added expense to the health care system. Infection prevention and control in health care settings is now of national priority endorsed by the Australian Government, Ministries of Health, the Australian Commission of Quality and Safety in Health Care, health care facility accreditation organisations, as well as internationally by the World Health Organization. HEB	349	Israeli Wars in Israeli Movies	From its first day, the State of Israel has been in a state of war with the Arab countries. Every few years, the fighting erupted into an open war. At the beginning of the country, there was a consensus that the wars were forced on the Israelis, and therefore, the heavy toll on human life was unavoidable. Since the Six Day War, 1967, and the political change in 1977, Israeli society is split in attitude toward war. The absolute belief in the political and military leaders was shaken, and new political agendas entered the political arena. To this divided society, the Intifadas occurred with the waves of terrorism. These events added fire to the heated debates in Israel. One means of expression is through the cinema. In this course, students watch, analyze, and discuss selected movies on the Israeli wars and terrorism in the streets of Israel. Through these movies, produced by Israelis, we'll try to understand the mood and attitude of the Israelis toward war, enemies, and political and military leaders. HST	404	Conquest:Colonial Latin Amer	How did Hernan Cortés and Francisco Pizarro defeat the Aztec and Inca Empires? Despite numeric inferiority, limited provisions, and little knowledge about the Americas, Cortés and Pizarro defeated advanced civilizations that had experienced warriors and millions of inhabitants. Possible explanations include the conquistador's valor, advanced weaponry, superior military strategy, Indian allies, and biological attacks. In their encounters with native peoples of the Americas, Europeans were not always conquerors. Alvar Núñez Cabeza de Vaca and Lope de Aguirre failed both in their attempt to conquer a large Indian civilization and in their effort to find mineral wealth. A few Europeans such as Bartolomé de Las Casas spoke out against the abuses committed against the Indians during the conquest. Explores these issues from the perspective of both Europeans and native peoples and looks at the long-term impact for Latin America and its peoples. HST	460	World War II	Explores the causes, conduct and consequences of World War II. When did World War II start? How was it fought, and what did that mean for soldiers, the homefront and millions of civilians in Japanese or German occupied regions? What did the world that emerged in its wake look like? The course explores these fundamental questions with an emphasis on multiple explanations of the causes of the war in Asia and Europe and the contingency of Allied victory. Explores the war as both a total and a global war in which perceptions of race, class and gender shaped the experience of combatants and noncombatants, many of whom died in indiscriminate bombing campaigns. Racial ideologies also led to the brutalization of soldiers, which in turn fueled the violence against civilians, as exemplified by the Holocaust and Japanese war crimes. Finally, the course turns to the global order emerging after the war and the different narratives that emerged from it. IPI	296	Inquiry	To be most effective in work and life, we need to learn how to recognize and solve problems, and to work in teams. Students work together to reach understanding on a large goal associated with human society and space exploration. An example from a previous class is, "What will the Moon be like after human settlement?" As a class, uses a weekly inquiry cycle to step toward the goal: read some content, ask a "natural next question" that takes us one step further toward the goal, seek content to help answer that question, and repeat. Students learn how to understand a complex problem through multiple steps, to approach challenging primary content, to productively critique each other's work, and to think critically. Students meet for 2 hours per week but work extensively outside of class.	Y	LEL	Y	GNA	The College of Liberal Arts and Sciences	Dean, The College of Liberal Arts and Sciences	3

IPI	496	Advanced Inquiry	To be most effective in work and life, we need to learn how to recognize and solve problems, and to work in teams. Students work together to reach understanding on a large goal associated with human society and space exploration. An example from a previous class is, "What will the Moon be like after human settlement?" Each student runs an independent research project using the techniques taught throughout the course. The research project requires some knowledge creation—that is, development of ideas, supported hypotheses, observations and the like, that add to the mass of human knowledge rather than just restating it. IVD	525	Fund of Entrepreneurial Leader	"Experiential" course for students to practice "being" a leader at the personal, interpersonal and community levels. While typical leadership classes leave one knowing about leaders and leadership, this class leaves students being leaders as part of their natural self-expression. The program follows an ontological pedagogy, rather than epistemological one. Ontology is the study of the nature and function of being "as lived" in real time. Epistemology by contrast deals with the varieties, grounds, and validity of knowledge. Leadership skills include mastery of communication at each of the three levels, from personal relationships to large-scale messaging for media and branding, and looking beyond the personal and interpersonal sociological level of analysis to incorporate principles of social and environmental justice into their relationships and the enterprises they lead.	N	LEC	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student; Corequisite(s): IVD 560; IVD 561
IVD	560	Innovation Studio I	A prerequisite for successful innovation and venture development is a deep understanding of the multidimensional context in which the innovation will be situated, and in which the venture will compete, whether a commercial enterprise or nonprofit. This course gives students the design, business and engineering research and evaluation tools and experience to investigate and immerse themselves in industry or sector customer needs, the competitive landscape and cultural context, as well as ways to predict and mitigate the unintended consequences of their innovation on society and the environment. Teaches students where to begin, how to inquire, how to evaluate information they uncover, and how to use critical thinking and analysis to develop the insights that become the foundation of their venture-development journey.	N	STO	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student; Corequisite(s): IVD 525
IVD	561	Innovation Studio II	Problem reframing is essential to the innovation process, and to properly diagnosing problems so they can be investigated from multiple perspectives. It entails pushing past conventional assumptions about barriers to success, to find root causes—sometimes different problems altogether—that inspire novel, diverse approaches. Problem reframing is a powerful tool that increases the options and resources available in addressing any challenge. Students learn the difference between root causes and symptoms, understand the systems affected by and affecting their challenge, and learn to see and act on problems as opportunities for breakthrough solutions.	N	STO	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student; IVD 560; Corequisite(s): IVD 525
IVD	562	Innovation Studio III	In this iterative, creative "make-to-learn" phase of venture development, students explore prototyping and testing with audiences or end-users to develop feedback loops for real-time evaluation of their ideas, then synthesize learning from both successes and failures to progress toward a solution. Key components include mastery of ideation and creative development, framing strategic questions and success indicators for prototyping of services or products, evaluation of feedback and iteration of progressively more promising ideas, and evaluation of their innovations measured against the success indicators they developed. Students learn and practice prototyping service interactions as well as product innovations. IVD	630	Scaling Entrepreneurial Leader	The personal skills required to succeed in a small start-up environment are different from those required to run a successful enterprise or nonprofit. Many entrepreneurs do not have access to the learning that prepares them to both launch and successfully scale their venture. Complexities of board management, fostering a creative culture, codifying a communication system that becomes a source of energy and a north star for the organization, inculcating values of social and environmental justice into a culture and translating them into daily behavior are required capacities which cannot be learned in theory, only in practice. Students master the skills to lead an enterprise through the challenges of the 21st century.	N	LEC	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student; GRA 562 with C or better; Corequisite(s): IVD 562; IVD 660
IVD	660	Innovation Studio IV	Faced with the challenge of business model generation and prototyping, students need to define the starting points of value proposition, supply chain and customer segments. Later in the process, a clear description of the revenue model, customer relationship, key resources, key activities, key partners and cost structure complement the original value proposition design. The refinement of the newly created business model is made through a process of iteration. Students have an overall comprehension of the strategic innovation process made of (a) strategy, (b) execution, (c) tools and (d) metrics before moving to the stages of scaling and growth of the business. In order to develop a viable business model, students need to understand the costs of development, manufacturing and getting their goods or services to customers.	N	STO	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student; IVD 525; IVD 560; IVD 561; IVD 562; Corequisite(s): IVD 630
IVD	661	Innovation Studio V	SCALE is translated as proportional growth of production and profit aiming at a larger market position. Understanding the timing to scale a business model is crucial to its success and scaling can be discussed in terms of market, process and team. Faced with scaling issues of their business models, students need to build their own framework--or tools--in order to make decisions concerning the whens (time) and hows (market, process, tools) of scaling. Topics covered also include, but not limited to, venture funding strategies, budgeting capital needs, developing e-commerce, CRM analytics, supply chain and operations. At the end of this semester, students present a fully developed venture, with clearly articulated market need, viable innovation based on end-user feedback, business model and plan for scale. Where relevant, students register their intellectual property through ASU, using the university's published guidelines and procedures. JST	346	Israeli Wars in Israeli Movies	From its first day, the State of Israel has been in a state of war with the Arab countries. Every few years, the fighting erupted into an open war. At the beginning of the country, there was a consensus that the wars were forced on the Israelis, and therefore, the heavy toll on human life was unavoidable. Since the Six Day War, 1967, and the political change in 1977, Israeli society is split in attitude toward war. The absolute belief in the political and military leaders was shaken, and new political agendas entered the political arena. To this divided society, the Intifadas occurred with the waves of terrorism. These events added fire to the heated debates in Israel. One means of expression is through the cinema. In this course, students watch, analyze, and discuss selected movies on the Israeli wars and terrorism in the streets of Israel. Through these movies, produced by Israelis, we'll try to understand the mood and attitude of the Israelis toward war, enemies, and political and military leaders. JUS	565	Crit./Comp. Issues: Disability	Examines the construction of disability as a social, cultural and political phenomenon. Focuses on how disability is defined and represented in society as well as the implications/consequences of such definitions. Hegemonic understandings of disability typically have employed narrow medical and therapeutic explanations. From such deterministic perspectives, the disabled individual often has been defined as deviant, stigmatized, incompetent and marginal. This class rejects the perception of disability as a functional impairment that limits a person's activities. Instead, disability is a construct that finds its meaning and representation within a social and cultural context. Accordingly, examines the ideologies that such representations can conceal in order to crack the hegemonic façade, challenging the ways in which disability is perceived and treated by the dominant society. JUS	656	Human Rights & Sustainability	Addresses the connections between human rights and environmental sustainability. Legal and scholarly approaches linking these areas present new perspectives for addressing some of the greatest challenges of our time, given the important resource dimensions of economic and social rights and the human dimensions of sustainability. Yet human rights demands and environmental concerns are not always in harmony. Explores these tensions and opportunities by examining three substantive areas: urban ecology and human rights, the human right to food, and the human rights implications of extractive industries such as oil and mining. Following an introduction to the key concepts of human rights and sustainability, explores the substantive areas through theoretical and empirical readings on each; grassroots accounts of struggles over environment-related human rights; and selections from literature and film that illustrate the environmental justice issues at stake. LAS	404	Conquest:Colonial Latin Amer	How did Hernan Cortés and Francisco Pizarro defeat the Aztec and Inca Empires? Despite numeric inferiority, limited provisions, and little knowledge about the Americas, Cortés and Pizarro defeated advanced civilizations that had experienced warriors and millions of inhabitants. Possible explanations include the conquistador's valor, advanced weaponry, superior military strategy, Indian allies, and biological attacks. In their encounters with native peoples of the Americas, Europeans were not always conquerors. Álvaro Núñez Cabeza de Vaca and Lope de Aguirre failed both in their attempt to conquer a large Indian civilization and in their effort to find mineral wealth. A few Europeans such as Bartolomé de Las Casas spoke out against the abuses committed against the Indians during the conquest. Explores these issues from the perspective of both Europeans and native peoples and looks at the long-term impact for Latin America and its peoples.
