ART	543	Performance Art	Performance art is the act of doing. It is not about representing, recounting, re-enacting or acting, or but simply doing. It is an art form of direct action. Students work with the elements of time, space, and the body as material to speak to cultural histories and collective contemporary experience while learning critical thinking skills and gaining knowledge about historical and contemporary performance artists. Students create performances and context-specific projects by making connections between art, life and public space. Since performance art/live art cannot be separated from the body who makes it, this course continually investigates the meaning and significance of performance art. For instance, what distinguishes an action as art? Is it different from an every day action like brushing your teeth? What makes it different? When is a job or labor a performance? How does a person (artist or audience) know when the art begins or when it ends? All performances are documented and presented in video or still photography examples online. Select works are posted on the Live Art Platform website at the end of the semester. ASB	442	Global Cities	This close look at megacities in the global south decisively challenges the outdated impression that the rest of the world's cities still lag way behind the U.S. and Europe. The social sciences' debate over 'global cities' anchors our examination of the reorganization of metropolitan social space under impact of neoliberal globalization since the 1970s. Explores urban inequalities of slums and dreamworlds; compares vernacular and transnational styles of urbanism (in architecture, design, markets, consumerism, jobs, ads, ways of living); and asks how transnational flows of people, capital and culture have reconfigured ethnic relations and national identities rooted in global cities. Students become virtual transnational flâneurs, tacking between the slums and skyscrapers of global cities, and conduct guided research on a global megacity to investigate how the production of the global city changes the lived space and urban culture of local residents, and how they respond. We ask, whose city is it? BIO	112	Discovery - Why Sex?	"Why?" is a question that animates the youngest of children to the most seasoned of scientists. The acts of asking and answering "Why?" highlight the integrated nature of scientific knowledge and discovery. Demonstrates scientific disciplines are not walled cities in which knowledge is neatly segregated from lines of inquiry and knowledge in other disciplines. Instead, scientific concepts weave throughout and between disciplines and scientists increasingly rely on colleagues from different scientific fields to find answers to scientific questions. So our journey to find responses to the question "Why Sex?" takes us not just to biology, but also to earth science and to physics. Along the way, scientists are linked together not only through concepts that crosscut the disciplines, but also in their reliance upon key scientific skills such as the ability to observe, think critically, measure, gather data and communicate their findings. BIO	568	Stress and the Brain	Covers the fundamentals of stress and brain interactions. Presents a foundation from a historical perspective, then the basics of an organism's stress response, including the activation of the sympathetic nervous system and the hypothalamic-pituitary-adrenal axis. A highly effective and robust stress response facilitates adaptation and behavioral flexibility. However, a maladaptive stress response can produce detrimental outcomes. The ultimate goal is to understand the dynamic and reciprocal processes by which the stress response and brain interact to produce behavioral flexibility and resilience or detrimental outcomes. BMY	504	Biomimicry Thinking	Biomimicry thinking is the practice of biomimicry from a methodology-based approach. It is a 15-week intensive in the methodology of biomimicry that reviews how biology and biomimicry can be incorporated into the four major phases of any design process: scoping, discovering, creating and evaluating. Covers the art of translating biological concepts into strategies for application and building a taxonomy of design principles.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	4		Prerequisite(s): Biomimicry MS student or Biomimicry certificate student; Pre- or corequisite(s): BMY 501
BMY	511	Biomimicry and Design	Biomimicry is innovation inspired by nature, or the conscious emulation of nature's genius. Prepares participants to design sustainable innovations using the biomimicry philosophy and methodology. Participants complete a 16-week series of lectures and assignments to demystify the design thinking process, understand how to harness the potential of approaching challenges with a design mind, distill a design challenge, understand user needs, build a bridge between biology and design, use a methodology for discovering models from nature, abstract design principles from bio-inspired strategies, and translate those principles into sustainable innovations. Participants both with a design background and without equally experience a deep immersion into the world of biomimetic design.	N	LEC	N	OPT	College of Global Futures	School of Complex Adaptive Systems	3		Pre- or corequisite(s): Biomimicry MS student; BMY 501
BMY	512	Biomimicry and Engineering	Prepares participants to understand the field of engineering; identify the types of engineers and what each one does; what constrains engineers' work under, materials selected by engineers, how to present biological ideas to engineers and how to integrate ideas from their discipline into sustainable engineering designs using biomimicry principles. Most examples used are of large engineered structures. These structures play critical functions in human systems, have a significant impact on the environment and last for over a 100 years, so it is important to imbed as much sustainability into their design as possible. Requires a final team project designed to put these ideas into practice.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Pre- or corequisite(s): Biomimicry MS student; BMY 501
BMY	516	Biomimicry and Business	Addresses business topics from the biomimicry point of view, explains mechanisms and tools for comparing and contrasting business and nature. Challenges participants to question conventional ways of conducting business and come up with new approaches based on a different point of view. Recommend BMY 502 and BMY 504 to be successful in this course.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Pre- or corequisite(s): Biomimicry MS student; BMY 501

CAS	501	Fundamentals Cmplx Sys Science	The enormous diversity of biological, social and technological systems is the product of evolution. As Darwin put it poetically: "There is grandeur in this view of life, with its several powers, having been originally breathed by the Creator into a few forms or into one; and that, whilst this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning endless forms most beautiful and most wonderful have been and are being evolved." In short, complexity is the product of evolutionary processes. This, in turn, implies that understanding complexity requires us to understand its evolutionary origins. This course is a comprehensive introduction to the evolutionary history of complex systems and the principles and mechanisms that guide this dynamic. Covers the consequences of evolutionary history of complex systems, such as vulnerability to failure or limits of the potential of these systems to change and adapt.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	502	CAS Computation	Most systems are complex. Complex systems share a number of critical features across all domains, including the fact that all complex systems process information and perform computations in the broadest sense. Explores the informational and computational dimensions of complex systems with an emphasis on how complex systems acquire, process, store and transmit information in a systematic way across the social, behavioral and life sciences and engineering.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	503	Fund Cmplx Sys Sci: Collect.	From neurons in a brain to fish in a school to people in an economy, collectives are all around us. These are complex systems in which we understand in some detail how the individual components behave and interact, but the behavior we are interested in is at the larger scale of the aggregate. The behavior of systems like these is challenging to predict and understand largely due to the sheer number of interacting components, as well as the unintuitive way that contributions from individuals scale up to have large collective effects. Complex systems science has developed an array of conceptual tools to help understand collective behavior. Explores these foundational concepts, including emergence, scaling laws, dynamical modes and coarse-graining. Uses these tools to de-mystify powerful aggregate-scale effects, from impressive feats of swarm intelligence to potentially harmful instabilities and hysteresis.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	520	Agent-Based Modeling	Agent-based modeling is a method to study the macro-level consequences of micro-level interactions of agents representing individuals, households, firms or other type of actors. Agent-based modeling is used to study the dynamics of complex adaptive systems across different domain areas. Covers the basics of agent-based modeling including programming computer simulations and how this method is used to study complex adaptive systems in different application areas. Examines the method for scientific research, especially the various ways of doing model analysis. Students perform individual assignments.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	521	Methods Complex Sys Science	Network science within the framework of complex adaptive systems. Begins with general introductions to different kinds of networks and their basic network properties. Then progresses to the mathematics and algorithms of network analysis while learning about computational feasibility and the importance of random graph comparisons. Each week students are responsible for readings and a write-up of that week's topics. These write-ups help build toward the final assignment incorporating all topics covered in this class. Upon completion, students should feel confident incorporating networks and their associated complexity into their research and worldview. CAS	522	Dynamic Mtds Complex Sys Sci	Focuses on the mechanisms through which complexity emerges in evolving and dynamical network architectures. Some of the best-known examples include gene expression networks, adaptive ecological networks, and neural networks for cognitive information processing. Complex systems theory deals with dynamical systems with a large number of interacting variables. Therefore, after an introduction to graph and network theory, the course covers the basic concepts of dynamical systems theory: continuous and discrete systems, attractor dynamics, bifurcation, and chaos. After introducing information theory, devoted to the fundamentals, the second part focuses on applications, especially to network dynamics. Students acquire familiarity through the analysis of concrete examples of both deterministic and random dynamics in the form of Boolean networks and random walks.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	523	Methods CMLPX Sys Sci: Stats	Because complex systems involve a large number of interacting components, observational studies of these systems typically generate data sets of high dimension. Examples include the hundreds or thousands of distinct neurons in a brain, genes in a cell, people in a society, firms in an economy, or texts in a corpus. To make sense of such data, a diverse set of data analytic tools has been developed to summarize key properties at the population level (statistics) and characterize predictable lower-dimensional patterns (dimensionality reduction). Provides a guided tour of such tools most relevant to complex adaptive systems. With a solid foundation in inferential statistics, students encounter PCA-type linear projections, nonlinear manifold techniques, topic modeling, clustering methods, network statistics, as well as more abstract foundations for how these methods work and when they fail. Students hone their data skills by applying state-of-the-art open-source software to real-world datasets.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	540	Socioecological Complex Syst	We live in a world that is neither wholly human nor wholly natural. Human decisions and actions combine with biological processes and physical forces transform cities, rural landscapes, ecosystems and biogeography, river systems, coastlines and the atmosphere. By emphasizing the importance of networks and feedbacks, complexity science is especially helpful in providing insight into the complex interactions between the human and natural components of the socioecological systems that are so critical to our lives and wellbeing. Examines key concepts for understanding socioecological system dynamics from a complex systems perspective. Explores how methods drawn from complexity science can trace the complex web of feedbacks between social, biological and geophysical processes and help to better understand and plan for change and stability in socioecological systems. Also looks at how complexity science can help contribute to relevant policy and governance for SES.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	541	Complex Urban Systems	Despite occupying only a tiny fraction of the world's area, cities house over half of earth's human population, consume over two thirds of global energy, and emit over 70% of global CO2 emissions. It is estimated that the combined ecological footprint of earth's urban areas already exceeds the entire area of our planet, and still globally 3 million more people migrate to cities every week. Cities are also the global engines of innovation, wealth creation, and production efficiencies. Thus, cities are both drivers of unsustainable behavior and our best hope for innovating sustainable solutions. Examines key concepts for understanding the complexity of urban systems, and explores how methods drawn from complexity science can be applied to urban structures and dynamics to better understand both past and future outcomes. Shows how complexity science might contribute to relevant policy and governance of cities and whether such a contribution is advisable. CAS	542	Sustainability, Cmplx Systems	Sustainability challenges are complex challenges. Sustainability as a problem of complexity explores in a systematic way the interconnected nature of sustainability challenges and presents a complex systems science-based framework for developing sustainability solutions.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	543	Complexity Economics	Complexity economics is the study of economic systems as evolving, complex systems. These systems consist of interacting individuals who perceive their environments, and take actions based on multiple criteria, which in turn affect their environments and the decisions available to other individuals. Complexity economics is not an extension of conventional, neo-classical economic theory and practice, which is based on the concepts of equilibrium, optimization and aggregation. Complexity economic attempts to understand economic phenomena through concepts of evolution, emergence, path dependency and the interdependent relationships between heterogenous individuals whose actions shape their environments. This offers a new basis for theory and practice that better reflects not only real problems and scenarios, but also how individuals make decisions and how those decisions have consequences for both the environment and society.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	544	Innovation in Complex System	Innovation is a central property of complex systems. Without innovation there would be no evolution of complex systems. Explores the dynamics of innovation in complex systems across a number of different domains, including biological, social, cultural and technological innovations. Focuses on the common principles and differences guiding innovation dynamics. Also focuses on unintended consequences of innovation, such as cascading effects and innovation traps and investigates why certain systems fail to innovate. Identifies common features of innovation across complex systems.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	545	Disease as a Complex System	Disease and failure are properties of complex systems. All organisms, groups, societies, technologies, ecosystems and the planetary system are complex systems. Disease can be seen as a failure in complex system function and has, at its root cause, the breakdown of complex regulatory structures that maintain function and facilitate adaptation. Comprehensive introduction into the origins, mechanisms and consequences of disease in a number of complex systems ranging from organisms to the planet and the technosphere. Explores disease, failure and health of these systems and investigates the underlying complex systems properties that are responsible for these different states. Identifies common features of failure across complex systems. CAS	546	Bio-Inspired AI & Optimization	Provides a survey of a variety of algorithms for optimization and multiagent control that are inspired by natural systems. Algorithms inspired by biological or physical systems can often be viewed as idealized models of those antecedent systems. CAS	570	Fundamentals of CAS Science	Many phenomena of critical relevance to human society are dynamic systems that change over individual and evolutionary time scales, and are highly interactive, both within and between systems. That is, they are complex adaptive systems (CAS), and thus share isomorphic properties like near-decomposability, hierarchical organization, scale-free networks, self-organized criticality, and emergence. Fundamentals of CAS science explores the diverse, interdisciplinary applications of a complex adaptive systems across the social, behavioral, and life sciences. CEL	300	Debating Capitalism	Explores and debates the politics, economics and morality of "capitalism"--the system of society that allows space for markets, profit-seeking and money-making. Readings cover the period from antiquity to modern commercial society. Authors studied include Aristotle, the Apostles, Aquinas, Locke, Franklin, Smith, Marx and Weber. Also serves as a broad introduction to the study of political economy. CEL	305	Pol Philosophy & Statesmanship	Examine the themes of justice and leadership in democracy and war through the texts of classical political thinkers, including Plato's Republic, Aristophanes' Clouds, Aristotle's Politics and Ethics, and Thucydides' account of The Peloponnesian War. Investigates questions of political leadership, ambition and the common good. Proceeds through discussion and student-led presentations of the big questions these texts raise.	N	LEC	N	GNA	The College of Liberal Arts and Sciences	School of Civic & Economic Thought and Leadership	3		Prerequisite(s): ENG 102, 105, or 108 with C or better; minimum 30 hours; Credit is allowed for only CEL 305 or CEL 394 (Classical Political Philosophy & Statesmanship)
CEL	320	Debating Modern Pol Liberty	Examines crucial debates in modern political thought, especially in the United States. A focus is defining what is distinctive about "modern thought," with recourse to Tocqueville's Democracy in America on the difference between ancien régime monarchies and modern liberal democratic polities. Other primary readings include works from such seminal moderns as Machiavelli, Hobbes and Locke, but America (not Europe) is the ultimate focus. Queries the core documents and ideas of the American Founding, and discerns the complex interplay of classical republican and liberal intellectual traditions. Close reading of The Federalist and selected Anti-Federalist writings prepare for a broader re-examination of the American political tradition, concluding with the ongoing dispute among progressivism, socialism and conservatism.	N	LEC	N	GNA	The College of Liberal Arts and Sciences	School of Civic & Economic Thought and Leadership	3		Prerequisite(s): ENG 102, 105, or 108 with C or better; minimum 30 hours; Credit is allowed for only CEL 320 or CEL 394 (Mod Political Thght:Orgns & Debats abt Mod Liberty)

Thinkers covered include Keynes, Hayek, Schumpeter, Polanyi, Galbraith, Friedman and Piketty. Also attends to the way economics and, more generally, social science have increasingly shaped public policy over the course of the last century.	N	SEM	N	GNA	The College of Liberal Arts and Sciences	School of Civic & Economic Thought and Leadership	3		Prerequisite(s): ENG 102, 105, or 108 with C or better; minimum 30 hours; Credit is allowed for only CEL 345 or CEL 394 (Cissscs of Mod Ecnmic Thght:Smith to Hayek & Beyond)
CEL	350	Philosophy, Politics&Economics	Prepares the foundation for students to become active participants, as citizens and leaders, in a liberal democratic society that faces an uncertain future. Provides familiarity with core conceptual tools provided by philosophy, politics and economics, and an appreciation for the foundation they provide together to address social and political uncertainties we face today as well as in the future. Reliance on any one disciplinary set of tools and skills is useful, of course, but the real challenges of any liberal democracy are met by neither technocratic nor bureaucratic solutions. They require an awareness of the relevance of ethics, politics and economics, as well as an appreciation for the limitations of each and the necessity of thinking through their interactions.	N	LEC	N	OPT	The College of Liberal Arts and Sciences	School of Civic & Economic Thought and Leadership	3		Prerequisite(s): ENG 102, 105, or 108 with C or better; minimum 30 hours; Credit is allowed for only CEL 350 or CEL 394 (Philosophy, Politics and Economics) OR Visiting University Student

CHI	338	Daode Jing: Way to the West	At 5,000 words, the Daode Jing [Tao-te ching, "the Scripture of the Way and its Powers," attributed to the Sage Laozi] is perhaps the shortest religious book in the world. It is also the most widely misinterpreted. In China, Daoists, Buddhists and Confucians have each taken its short, pithy statements as warrant for their very different belief systems. In the West, missionaries, new-age pundits, hippies, rock-stars, mystics and LSD advocates each claim to understand the "true meaning" of Laozi's mystical words. But "the farther one travels, the less one knows..." Students read representative samples of these explanations to understand why this brief book of wisdom has endured for over 2000 years. Requires no knowledge of Chinese. Presents all Chinese texts in the translations of the instructor. CPP	513	Pub Priv Partnerships for EMHS	Focuses on how public private partnerships (P3s) offer alternative mechanisms for supporting community emergency preparedness efforts, hazard and risk management practices, and community resilience promotion. The traditional form of a P3 model is typically a build-operate-maintain arrangement (with various permutations of those element combinations) around physical infrastructure. However, more complex public-private relationships related to emergency and disaster management issues, public health issues and other social welfare concerns have emerged over the past several decades. Investigating how these arrangements might affect emergency management, homeland security and the management of hazards and risk in general is critical to understanding how public sector operations are likely to function in the future in the United States. CPP	523	Found Prog Eval I: Mult Reg	Regression serves as the foundation for modern quantitative program evaluation techniques. Regression analysis is not a single thing--it is a powerful set of tools used to examine relationships in data and test hypotheses concerning the significance of these relationships. Regression can be used to analyze observational data, in which case it can be used to identify important correlations that help us predict when events will occur together. In the program evaluation context we are specifically interested in causal analysis, which allows us to determine whether a management practice, a nonprofit or government program, or a specific public policy has a positive impact. When certain conditions are met we can use regression analysis to estimate the impact of a policy or program. This course builds a foundational understanding of the mechanics of multiple regression, the proper interpretation of regression models, and the circumstances in which we can use regression results for causal reasoning. EGR	555	Mechatronics Device Innovation	Project-based course on the design of mechatronic devices to address needs identified by hospital-based clinicians. Students work in teams with physicians to develop a novel mechatronic device while in parallel an entrepreneurial mindset is fostered. The design process includes: needs finding; problem identification; prior art searches; strategy and concept generation; estimation; sketching; sketch modeling; machine elements, ergonomics and prototyping. Emphasizes the development of creative designs that is motivated by analytical models. Also includes lectures on specific aspects pertinent to novel devices including intellectual property, marketing, licensing and startups and lean launchpad for startups, provided by Skysong Innovations. Significant communication component as students present ideas in class and at an industry forum. Students also write a publication quality final paper, which they are encouraged to submit to a conference or journal.	N	LEL	N	GNA	Ira A. Fulton Schools of Engineering	Engineering Programs	3		Prerequisite(s): degree- or nondegree-seeking graduate; Credit is allowed for only EGR 494 (Mechatronics Device Innovation) or EGR 555 or EGR 598 (Mechatronics Device Innovation)

ENG	205	Intro to Writing, Rhet, Lit	How do we understand the ways in which people in systems--both small and large--social, political, and economic, throughout the world use language and other symbolic resources to carry out work? Three fields of study take this kind of questioning especially seriously: studies in writing, studies in rhetoric, and studies in literacy. Inquiry--that persistent, deliberate commitment to question and to build methods sufficient to that questioning--is a generative force in each of these fields of study. Familiarizes students with such questioning traditions and to help them judge for themselves what each is good for. The goal is to strengthen your own repertoire and decision-making power for producing and circulating work (widely defined across material, print, and digital media) that matters in our risk-ridden world. Quite simply, then, this is a course in asking good questions and in evaluating responses to situations that spur questioning. ENG	229	Love and Lust in Medieval Lit	The medieval period, roughly 600-1500, cannot reasonably be called the "dark ages." Explores medieval literature, noting the astonishing differences from our own time, as well as surprising similarities. Western civilization, our own 21st century, for better or for worse, is indebted to the love and lust of the medievals. And then there's the "trans" domains--transnationalism, transgender studies and transhumanism--which, like so many contemporary theoretical formations opens up new perspectives on where and how we live, who we are and even what we are. The contemporary theories studied in this course provide the tools for understanding 21st-century life and the limits and enjoyments of our humanity. ENG	391	Writing in Context	How do we understand the ways in which people use written language to carry out work in professional, academic, social and/or personal contexts? How does our understanding of the ways writing is produced for an audience shift between and among these different contexts? More importantly, how do writers adapt their writing practices in order to facilitate audience understanding as well as cultivate an audience's capacity for action? Familiarize students with rhetorical practices that position them to read, assess and respond to the rhetorical demands of a wide range of writing contexts. Strengthens students' existing rhetorical skill sets and problem-setting capacities for producing and circulating work (widely defined across material, print and digital media) that responds to a range of problems in an applied manner. Assesses the rhetorical demands of writing contexts and in developing and producing tailored, audience-specific texts that forward work in complex, interdisciplinary environments. ENG	392	History of Rhetorical Theory	Begins in ancient Greece with the rise of the art of public oratory (known as rhetoric) and ends in the present, an era dominated by mass media. Engages in a great deal of reading--lots of very old writings as well as some newer ones. Covers a great many topics and ideas; focuses by continually returning to the subject of public discourse. Challenging readings designed to emphasize the connection between systems of philosophy (or "worldview") and systems of communication. By focusing on big ideas, students become a better thinker and communicator in any chosen career.	N	LEC	N	GNA	The College of Liberal Arts and Sciences	Department of English	3		Prerequisite(s): ENG 102, 105, or 108 with C or better
ENG	393	Theories of Literacy	While theories of literacy have, for the most part, been determined by the primacy of reading and writing script, more recent scholarship in literacy theory and history has served to challenge such limitations. Many contemporary perspectives on literacy view scripted text as one component of complex acts and practices of written communication that occur in social contexts. Studies that examine such communicative acts in their local contexts reveal that literate practices and the texts that are produced are imbued with social and cultural values and traditions and the needs and desires of individuals. As the statements above illustrate, theories of literacy themselves are embedded within the values and assumptions of individuals, institutions, and academic specialization. Examines some of these theories, their influences on academic scholarship and pedagogy, the ideological assumptions that inform them, and how we might view these theories within broader social-cultural landscapes. Focuses on developing an entrepreneurial mindset to prepare students for creating or participating in new ventures in the future, whether that is right now or after graduation. While this course does not contain the secret entrepreneurship code or the instruction manual for entrepreneurial success, it does provide a solid foundation of theory and practice that can set a budding entrepreneur on the right path. Students learn foundational entrepreneurship theories, participate in field activities where those theories are being put to the test, as well as learn to critically analyze their own ideas and other venture opportunities. Utilizes a mixture of teaching mediums including readings, videos, guest speakers, simulations, case studies and assignments completed as an individual and in teams.	N	LEL	N	GNA	W. P. ETH	450	Latina/os: Social Inequality	Advanced interdisciplinary understanding of the issues facing Chicano, Mexican American and Latino communities in relation to K-16 schooling in the southwestern United States. Examines various schools of thought that have shaped social discourse and policies, develops a critical perspective on the social and political issues affecting education, and identifies issues--both historical and contemporary--affecting Chicanos in public education.	N	LEC	N	GNA	New College of Interdisciplinary Arts and Sciences	School of Humanities, Arts, and Cultural Studies	3	C	Prerequisite(s): minimum 45 hours; Credit is allowed for only AMS 450 or ETH 450 or LAS 450 or AMS 429 (Latino/a School & Social Inequity)
ETH	469	Abject Bodies & Politics Trash	Examines the possibilities inherent in "theorizing from the gutter"; looking at the world not from a lofty "Ivory Tower" but from the slime, the muck, the dumpster, the trash heap, the wasteland, the discarded and the downtrodden. Takes its theoretical framework from a radical 1960s manifesto called SCUM Manifesto by Valerie Solanas and from the French feminist philosophies of Julia Kristeva, who theorized the abject as a relationship with the grotesque that reveals the deep-seated fear of death. Uses these theoretical positions to examine trash, both abstractly and literally. Works through a variety of concepts ranging from actual trash, garbage, waste, toxic sludge, pollution and dirt, and tackles more abstract notions of trash such as the knowledge produced on the fringe in circuses, amusement parks, "trailer trash" zones, freak shows and the bodies of those marked as "Other" or different. FIS	201	Innovation in Society	Examines the vast implications of innovation, why it is so powerful, and why it really matters. Introduces the theories and processes of innovation as they relate to socio-political change. Students gain knowledge about the history and future of innovation and explore how innovation is entangled with social, political and ethical issues. By identifying and applying analytical tools, students learn to account for the diverse workings and effects of innovation. This course strives to debunk the myth that innovation happens automatically. Rather, different actors rally to create innovations that shape our society, economy and cultures--and that those innovations are not inevitable and could be otherwise. FIS	305	Ways of Knowing	Students research, beginning with the concept of research itself and its various purposes, highlighting knowledge and how it is created in different disciplinary approaches. Exposes historical and philosophical underpinnings of how research is conceptualized, presented and implemented, including what constitutes information, knowledge and evidence. Introduces material that is in a traditional research design and methodology course; however, the emphasis uniquely focuses on knowledge creation, innovation, the nature of disciplinary knowledge and its impact on society. Explores the epistemological differences in problem identification and approaches to inquiry in the disciplinary perspectives of engineering, the sciences and in the social sciences. FIS	307	Navigating Futures	Foresight methods and their potentials as entry-points into public discussions about near- and mid-range technoscientific developments. Four elements constitute the organizing axis of the course: (1) the history of foresight exercises in government agencies and business organizations; (2) the methods of four forms of foresight exercises (technology foresight, science and technology studies, anticipatory governance and scenario development); (3) a comparative assessment of these dominant forms; and (4) a group-based application exercise using one of the foresight methods. FIS	334	Science, Tech, & Inequality	Conceptual and theoretical frameworks; provides empirical case studies that contribute to understandings of science and technology as they are used in society. The applications of science and technology in society need to be understood as instrumental to the creation and maintenance of inequality within and between societies. Science and technology does not merely cause or alleviate inequality, but are more profoundly implicated in social relations regarding distribution and access to the benefits of different technologies as well as exposure to risks from science and technology projects in society. The more pervasive and obdurate sources of social distribution are enshrined and entrenched in these scientific and technological systems.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3	C	Prerequisite(s): minimum 45 hours; Credit is allowed for only FIS 334 or JUS 334
FIS	335	Designing Knowledge	Provides a foundational understanding of how social organizations make and use knowledge. From research laboratories to biotechnology companies to statistical agencies, many organizations are specifically designed to be knowledge enterprises, enterprises whose primary purpose is to produce knowledge. All organizations in modern societies also operate knowledge systems: systems whose purpose is to create, validate, circulate, communicate and apply knowledge in the making of decisions. Examines how these forms of organization work and contribute to modern societies. FIS	336	Science and Technology Policy	Science and technology are powerful forces in the modern world. They have been hailed as a way to address everything from world hunger to old age. This does not, however, happen automatically, nor does it always work out the way one presumes. Governments make numerous decisions that affect the direction and application of science and technology, and government policies are affected by a myriad of social, political, and cultural factors. This class will explore the variety of ways in which governments make these policies, how the policies shape the development of science and technology and their applications, and how policy may be shaped to create better futures. Governments around the world have coalesced around the idea that science and technology are necessary for the promotion of the good life. We will examine how they put this idea into action by looking at five interrelated topics: Food, Security/Military, Health, Economy, and Sustainability.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3		
FIS	337	Innovation and Global Developm	Persistent inequality and poverty continue to plague nations including the USA even in the 21st century. Global development is a complex idea that attempts to address interrelated paradigms of culture, economy, equity, governance, history, societal dynamics, as well as technological issues. Using the framework of the Sustainable Development Goals 2030 (SDGs) this course examines, analyzes and critiques indicators of SDGs as well as explores innovative measures of development that nations around the world are planning and implementing in order to improve the lives of their citizens now and for the future. FIS	432	Prob Solving-StrategicThinking	Students learn how to ask questions, brainstorm and communicate ideas, while dealing with uncertain outcomes and unpredictable risks caused by the ideas and solutions they propose. In understanding which ideas and solutions stick and which don't, students learn how different factors influence the birth, life and death of ideas and the socio-technical systems in which ideation exists. Does it matter who asks the questions and proposes the ideas, who is trying to participate, who was there first, if there is a profit or other conflicting motive and the context and the interests that result in certain solutions being picked over others? This course uses exploration learning approaches, where students follow a progression through what they discover, from understanding who they are as individuals, to how ideas are formed and hypothesis made about proposed solutions. Since the Six Day War, 1967, and the political change in 1977, Israeli society is split in attitude toward war. The absolute belief in the political and military leaders was shaken, and new political agendas entered the political arena. To this divided society, the Intifadas occurred with the waves of terrorism. These events added fire to the heated debates in Israel. One means of expression is through the cinema.
