| BMY | 503 | Biology Taught Functionally | Biomimicry teaches biology through the lens of function, thereby providing a core understanding in biology for all students, no matter their background. Explores how biologists gather and research information and how that knowledge can inform other disciplines. Also introduces the art of translating biological concepts into strategies for application, which is then carried throughout all the courses. Students learn how to work with biologists on a biomimicry team and how to weave biology and biomimicry together. The biologists in the cohort not only learn to look at nature through the function lens, but also act as subject matter experts for their interdisciplinary teams and teaching assistants. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 4 | | Pre- or corequisite(s): Biomimicry MS or Biomimicry certificate student; BMY 501 |
| BMY | 504 | Biomimicry Thinking | Biomimicry thinking is the practice of biomimicry from a methodology-based approach. It is a 15-week intensive in the methodology of biomimicry that reviews how biology and biomimicry can be incorporated into the four major phases of any design process: scoping, discovering, creating and evaluating. Covers the art of translating biological concepts into strategies for application and building a taxonomy of design principles. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 4 | | Prerequisite(s): Biomimicry MS student or Biomimicry certificate student; Pre- or corequisite(s): BMY 501 |
| BMY | 511 | Biomimicry and Design | Prepares participants to facilitate the design of sustainable innovations using the biomimicry philosophy and methodology. Participants engage in a series of lectures and assignments to demystify the design thinking process, understand how to harness the potential of approaching challenges with a design mind, distill a design challenge, understand user needs, build a bridge between biology and design, use a methodology for discovering models from nature, abstract design principles from biological strategies, and translate those principles into sustainable innovations. Participants with or without a design background equally experience a deep immersion into the world of biomimetic design. | N | LEC | N | OPT | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): BMY 504 |
| BMY | 512 | Biomimicry and Engineering | Prepares participants to understand the field of engineering; identify the types of engineers and what each one does; what constrains engineers work under, materials selected by engineers, how to present biological ideas to engineers and how to integrate ideas from their discipline into sustainable engineering designs using biomimicry principles. Most examples used are of large engineered structures. These structures play critical functions in human systems, have a significant impact on the environment and last for over 100 years, so it is important to imbed as much sustainability into their design as possible. Requires a final team project designed to put these ideas into practice. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): BMY 502; BMY 504 |
| BMY | 516 | Biomimicry and Business | Addresses business topics from the biomimicry point of view; explains mechanisms and tools for comparing and contrasting business and nature. Challenges participants to question conventional ways of conducting business and come up with new approaches based on a different point of view. Recommend BMY 502 and BMY 504 to be successful in this course. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 3 | | Pre- or corequisite(s): Biomimicry MS student; BMY 501 |
| BMY | 517 | Human-Nature Connection | Grounds the emerging discipline of biomimicry as a continuation of our ancestral connection with nature. Human-Nature Connection (HNC) engages participants in an exploration of the meaning and value of connecting with nature. Topics include defining humans, nature, and our connection with nature; establishing the evolutionary, personal, and socio-cultural influences on the different expressions of this connection; and illustrating the relevance of biomimicry to the human-nature connection. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 2 | | Pre- or corequisite(s): Biomimicry MS student; BMY 501 |
| BMY | 530 | Virtual Design Lab Practicum | Practicum designed to allow participants to dive deep into the biomimicry tools and resources presented during the program and to apply them selectively to a specific and unique opportunity of the student's choosing. Projects should have a meaningful outcome achievable within the semester, and should engage the scoping, discovering, creating and evaluating phases of biomimicry thinking. Deliverables are milestone based, and the final deliverable should have application in a real-world setting. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 2 | | Prerequisite(s): BMY 501; BMY 502; BMY 503; BMY 504; Biomimicry MS student with minimum 20 hours or Biomimicry Certificate student with minimum 13 hours; Pre- or corequisite(s): Biomimicry MS or Biomimicry Certificate student |

| CAS | 363 | From Cells to Society: Understanding Complexity | Equips students with concepts and empirical examples they need to understand the role of complexity in the world around them. Complexity science is based on the fundamental principle that entities and phenomena in the world around us are systems composed of many parts that interact to produce their global characteristics. For example, cells interact to produce organs and tissues, which in turn interact to produce physiological processes (i.e., the capacity to metabolize food to produce new compounds and energy) and physical infrastructure (skeletal and muscular structure) which produce organisms. Organisms, (e.g., humans) interact to form groups, villages, cities, nations. | N | LEC | N | OPT | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): minimum 45 hours; Credit is allowed for only AML/ASB/BIO/SOS 394 (From Cells to Societies) or ASB 363 or BIO 363 or CAS 363 or SOS 363 OR Visiting University Student |

| CAS | 501 | Fundamentals of Complex Systems Science: Evolution | The enormous diversity of biological, social and technological systems is the product of evolution. As Darwin put it poetically: "There is grandeur in this view of life, with its several powers, having been originally breathed by the Creator into a few forms or into one; and that, whilst this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning endless forms most beautiful and most wonderful have been and are being evolved." In short, complexity is the product of evolutionary processes. This, in turn, implies that understanding complexity requires us to understand its evolutionary origins. This course is a comprehensive introduction to the evolutionary history of complex systems and the principles and mechanisms that guide this dynamic. Covers the consequences of evolutionary history of complex systems, such as vulnerability to failure or limits of the potential of these systems to change and adapt. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): degree- or nondegree-seeking graduate student |
| CAS | 502 | Fundamentals of Complex Systems Science: Computation | Most systems are complex. Complex systems share a number of critical features across all domains, including the fact that all complex systems process information and perform computations in the broadest sense. Explores the informational and computational dimensions of complex systems with an emphasis on how complex systems acquire, process, store and transmit information in a systematic way across the social, behavioral and life sciences and engineering. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): degree- or nondegree-seeking graduate student |
| CAS | 503 | Fundamentals of Complex Systems Science: Collectives | From neurons in a brain to fish in a school to people in an economy, collectives are all around us. These are complex systems in which we understand in some detail how the individual components behave and interact, but the behavior we are interested in is at the larger scale of the aggregate. The behavior of systems like these is challenging to predict and understand largely due to the sheer number of interacting components, as well as the unintuitive way that contributions from individuals scale up to have large collective effects. Complex systems science has developed an array of conceptual tools to help understand collective behavior. Explores these foundational concepts, including emergence, scaling laws, dynamical modes and coarse-graining. Uses these tools to de-mystify powerful aggregate-scale effects, from impressive feats of swarm intelligence to potentially harmful instabilities and hysteresis. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): degree- or nondegree-seeking graduate student |

Begins with general introductions to different kinds of networks and their basic network properties. Then progresses to the mathematics and algorithms of network analysis while learning about computational feasibility and the importance of random graph comparisons. Each week students are responsible for readings and a write-up of that week's topics. These write-ups help build toward the final assignment incorporating all topics covered in this class. Upon completion, students should feel confident incorporating networks and their associated complexity into their research and worldview. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): degree- or nondegree-seeking graduate student |
| CAS | 522 | Methods for Complex Systems Science: Dynamical Systems | Focuses on the mechanisms through which complexity emerges in evolving and dynamical network architectures. Some of the best-known examples include gene expression networks, adaptive ecological networks, and neural networks for cognitive information processing. Complex systems theory deals with dynamical systems with a large number of interacting variables. Therefore, after an introduction to graph and network theory, the course covers the basic concepts of dynamical systems theory: continuous and discrete systems, attractor dynamics, bifurcation, and chaos. After introducing information theory, devoted to the fundamentals, the second part focuses on applications, especially to network dynamics. Students acquire familiarity through the analysis of concrete examples of both deterministic and random dynamics in the form of Boolean networks and random walks. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): degree- or nondegree-seeking graduate student |
| CAS | 523 | Methods for Complex Systems Science: Statistics and Dimensionality Reduction | Because complex systems involve a large number of interacting components, observational studies of these systems typically generate data sets of high dimension. Examples include the hundreds or thousands of distinct neurons in a brain, genes in a cell, people in a society, firms in an economy, or texts in a corpus. To make sense of such data, a diverse set of data analytic tools has been developed to summarize key properties at the population level (statistics) and characterize predictable lower-dimensional patterns (dimensionality reduction). Provides a guided tour of such tools most relevant to complex adaptive systems. With a solid foundation in inferential statistics, students encounter PCA-type linear projections, nonlinear manifold techniques, topic modeling, clustering methods, network statistics, as well as more abstract foundations for how these methods work and when they fail. Students hone their data skills by applying state-of-the-art open-source software to real-world datasets. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): degree- or nondegree-seeking graduate student |
| CAS | 540 | Socioecological Complex Systems | We live in a world that is neither wholly human nor wholly natural. Human decisions and actions combine with biological processes and physical forces transform cities, rural landscapes, ecosystems and biogeography, river systems, coastlines and the atmosphere. By emphasizing the importance of networks and feedbacks, complexity science is especially helpful in providing insight into the complex interactions between the human and natural components of the socioecological systems that are so critical to our lives and wellbeing. Examines key concepts for understanding socioecological system dynamics from a complex systems perspective. Explores how methods drawn from complexity science can trace the complex web of feedbacks between social, biological and geophysical processes and help to better understand and plan for change and stability in socioecological systems. Also looks at how complexity science can help contribute to relevant policy and governance for SES. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): degree- or nondegree-seeking graduate student |

| CAS | 541 | Complex Urban Systems | Despite occupying only a tiny fraction of the world's area, cities house over half of earth's human population, consume over two thirds of global energy, and emit over 70% of global CO2 emissions. It is estimated that the combined ecological footprint of earth's urban areas already exceeds the entire area of our planet, and still globally 3 million more people migrate to cities every week. Cities are also the global engines of innovation, wealth creation, and production efficiencies. Thus, cities are both drivers of unsustainable behavior and our best hope for innovating sustainable solutions. Examines key concepts for understanding the complexity of urban systems, and explores how methods drawn from complexity science can be applied to urban structures and dynamics to better understand both past and future outcomes. Shows how complexity science might contribute to relevant policy and governance of cities and whether such a contribution is advisable. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 2-3 | | Prerequisite(s): degree- or nondegree-seeking graduate student |
| CAS | 542 | Sustainability as a Problem Complexity | Sustainability challenges are complex challenges. Sustainability as a problem of complexity explores in a systematic way the interconnected nature of sustainability challenges and presents a complex systems science-based framework for developing sustainability solutions. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): degree- or nondegree-seeking graduate student |
| CAS | 543 | Complexity Economics | Complexity economics is the study of economic systems as evolving, complex systems. These systems consist of interacting individuals who perceive their environments, and take actions based on multiple criteria, which in turn affect their environments and the decisions available to other individuals. Complexity economics is not an extension of conventional, neo-classical economic theory and practice, which is based on the concepts of equilibrium, optimization and aggregation. Complexity economic attempts to understand economic phenomena through concepts of evolution, emergence, path dependency and the interdependent relationships between heterogenous individuals whose actions shape their environments. This offers a new basis for theory and practice that better reflects not only real problems and scenarios, but also how individuals make decisions and how those decisions have consequences for both the environment and society. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): degree- or nondegree-seeking graduate student |
| CAS | 544 | Innovation in Complex System | Innovation is a central property of complex systems. Without innovation there would be no evolution of complex systems. Explores the dynamics of innovation in complex systems across a number of different domains, including biological, social, cultural and technological innovations. Focuses on the common principles and differences guiding innovation dynamics. Also focuses on unintended consequences of innovation, such as cascading effects and innovation traps and investigates why certain systems fail to innovate. Identifies common features of innovation across complex systems. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): degree- or nondegree-seeking graduate student |
| CAS | 545 | Disease as a Complex System | Disease and failure are properties of complex systems. All organisms, groups, societies, technologies, ecosystems and the planetary system are complex systems. Disease can be seen as a failure in complex system function and has, at its root cause, the breakdown of complex regulatory structures that maintain function and facilitate adaptation. Comprehensive introduction into the origins, mechanisms and consequences of disease in a number of complex systems ranging from organisms to the planet and the technosphere. Explores disease, failure and health of these systems and investigates the underlying complex systems properties that are responsible for these different states. Identifies common features of failure across complex systems. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): degree- or nondegree-seeking graduate student |
| CAS | 546 | Bio-Inspired AI and Optimization | Provides a survey of a variety of algorithms for optimization and multiagent control that are inspired by natural systems. Algorithms inspired by biological or physical systems can often be viewed as idealized models of those antecedent systems. Consequently, also explores potential problems (and solutions) in these algorithms that are analogous to fundamental but less well-known issues in the biological and physical systems that inspire them. | N | LEC | N | GNA | College of Global Futures | School of Complex Adaptive Systems | 3 | | Prerequisite(s): degree- or nondegree-seeking graduate student |

| CDH | 501 | Digital Humanities: Critical Theory and Methods | Digital technologies are now intricately woven into our lives--whether it's in terms of authoring a paper in a text editor, sending texts and emails, or doing data analysis. Popular narratives of the "big" and the "new" celebrate and sometimes bemoan the ways that these tools shape our communication, access to information, habits and even our physical bodies. Focuses on the histories of these technologies, their operations, popular conceptions about such tools, and their affordances and limits for humanities scholarship. Students learn how to leverage digital technologies, but also how to critically read them. Broad ranging; in addition to surveying the "big tent," students are encouraged to utilize their final projects to engage with specific disciplinary digital tools and methods relevant to their scholarly work. | N | LEL | N | OPT | College of Liberal Arts and Sciences | School of International Letters and Cultures | 3 | | Prerequisite(s): degree- or nondegree-seeking graduate student; Credit is allowed for only CDH 501 or HST 504 or REL 504 |

| CEL | 300 | Debating Capitalism | Explores and debates the politics, economics and morality of "capitalism"--the system of society that allows space for markets, profit-seeking and money-making. Readings cover the period from antiquity to modern commercial society. Authors studied include Aristotle, the Apostles, Aquinas, Locke, Franklin, Smith, Marx and Weber. Also serves as a broad introduction to the study of political economy. | N | LEC | N | GNA | College of Liberal Arts and Sciences | School of Civic and Economic Thought and Leadership | 3 | | Prerequisite(s): ENG 102, 105, or 108 with C or better; minimum 30 hours; Credit is allowed for only CEL 300 or CEL 394 (Capitalism and Great Economic Debates) OR Visiting University Student |

| CEL | 305 | Classical Political Statecraft | Examines political leadership, ambition and the common good in the texts of thinkers from the Ancient world. From thinkers as diverse as Sun Tzu, Thucydides and Tacitus, to Plato, Cicero and Dante, asks questions about the essence of the common good, justice and war as they were lived and discussed by the contemporaries of the age. Proceeds through discussion and student-led presentations of the enduring questions these texts raise. | N | LEC | N | GNA | College of Liberal Arts and Sciences | School of Civic and Economic Thought and Leadership | 3 | | Prerequisite(s): ENG 102, 105, or 108 with C or better; minimum 30 hours OR Visiting University Student |
| CEL | 320 | Modern Political Thought: Origins and Debates about Modern Liberty | Examines crucial debates in modern political thought, especially in the United States. A focus is defining what is distinctive about "modern thought," with recourse to Tocqueville's Democracy in America on the difference between ancien régime monarchies and modern liberal democratic polities. Other primary readings include works from such seminal moderns as Machiavelli, Hobbes and Locke, but America (not Europe) is the ultimate focus. Queries the core documents and ideas of the American Founding, and discerns the complex interplay of classical republican and liberal intellectual traditions. Close reading of The Federalist and selected Anti-Federalist writings prepare for a broader re-examination of the American political tradition, concluding with the ongoing dispute among progressivism, socialism and conservatism. | N | LEC | N | GNA | College of Liberal Arts and Sciences | School of Civic and Economic Thought and Leadership | 3 | | Prerequisite(s): ENG 102, 105, or 108 with C or better; minimum 30 hours; Credit is allowed for only CEL 320 or CEL 394 (Mod Political Thght:Orgns & Debats abt Mod Librty) |

| CEL | 350 | Philosophy, Politics and Economics | Prepares the foundation for students to become active participants, as citizens and leaders, in a liberal democratic society that faces an uncertain future. Provides familiarity with core conceptual tools provided by philosophy, politics and economics, and an appreciation for the foundation they provide together to address social and political uncertainties we face today as well as in the future. Reliance on any one disciplinary set of tools and skills is useful, of course, but the real challenges of any liberal democracy are met by neither technocratic nor bureaucratic solutions. They require an awareness of the relevance of ethics, politics and economics, as well as an appreciation for the limitations of each and the necessity of thinking through their interactions. | N | LEC | N | OPT | College of Liberal Arts and Sciences | School of Civic and Economic Thought and Leadership | 3 | SB | Prerequisite(s): ENG 102, 105, or 108 with C or better; minimum 30 hours; Credit is allowed for only CEL 350 or CEL 394 (Philosophy, Politics and Economics) OR Visiting University Student |

| CHI | 338 | Daode Jing: Way to the West | At 5,000 words, the Daode Jing [Tao-te ching, "the Scripture of the Way and its Powers," attributed to the Sage Laozi] is perhaps the shortest religious book in the world. It is also the most widely misinterpreted. In China, Daoists, Buddhists and Confucians have each taken its short, pithy statements as warrant for their very different belief systems. In the West, missionaries, new-age pundits, hippies, rock-stars, mystics and LSD advocates each claim to understand the "true meaning" of Laozi's mystical words. But "the farther one travels, the less one knows..." Students read representative samples of these explanations to understand why this brief book of wisdom has endured for over 2000 years. | CTE | 110 | Introduction to Culture, Technology and Environment | Investigates the dominant critical perspectives about three of the most fundamental constituents of human civilization: culture, environment and technology. The attention to the interaction and interdependence between environment and technologies (old and new) has been recently rising. Brings in culture--from the biological to the mammal--as another node to the approach, helping students realize the co-existence of these aspects in our life, to see how these topics interact, and the profound influence they have on contemporary issues. After introducing various notions of culture, environment and technology, draws on concrete, hands-on and interactive case studies that epitomize how culture, environment and technology have been connected throughout human history and, indeed, have shaped the modern, technologized and globalized world in which humans and their nonhuman planet mates live today. | N | LEC | N | GNA | College of Liberal Arts and Sciences | Department of English | 3 | | |

| DSC | 555 | Strategic Design Futures | Designers are increasingly addressing more strategic and long-term situations, while non-designers are increasingly interested in using design approaches to address diverse challenges. Strategic design is a practice that focuses on formulating strategies (problem setting) rather than only implementing strategies (problem solving). Strategic design is closely related to contemporary and emergent design practices such as user experience design, design thinking, service design, speculative design, behavioral design, and co-design, which are increasingly explored, adopted and adapted in projects and organizations. Students understand and practice a variety of strategic design methods and mindsets with the aim of changing and envisioning futures. With hands-on activities and real-world context, students use and develop core strategic design skills such as visualization, sensemaking, synthesis, speculation and facilitation. Some design tools that may be used include storyboards, user flows, journey mapping, participatory ideation, visioning, service blueprints, prototyping-testing. Includes seminar discussions and hands-on activities with a "live project." | N | PRO | N | Z1 | Herberger Institute for Design and the Arts | The Design School | 3 | | Prerequisite(s): degree- or nondegree-seeking graduate student; Credit is allowed for only DSC 555 or DSC 598 (Strategic Design Futures) or HSD 555 |

| ENG | 205 | Introduction to Writing, Rhetorics and Literacies | How do we understand the ways in which people in systems--both small and large--social, political, and economic, throughout the world use language and other symbolic resources to carry out work? Inquiry--that persistent, deliberate commitment to question and to build methods sufficient to that questioning--is a generative force in each of these fields of study. Familiarizes students with such questioning traditions and to help them judge for themselves what each is good for. The goal is to strengthen your own repertoire and decision-making power for producing and circulating work (widely defined across material, print, and digital media) that matters in our risk-ridden world. Quite simply, then, this is a course in asking good questions and in evaluating responses to situations that spur questioning. | N | LEC | N | GNA | College of Liberal Arts and Sciences | Department of English | 3 | L | Prerequisite(s): ENG 102, 105, or 108 with C or better OR Visiting University Student |

| ENG | 229 | Love and Lust in Medieval Literature | The medieval period, roughly 600-1500, cannot reasonably be called the "dark ages." Indeed, the Middle Ages provides us with a corpus of literature replete with complex characters struggling to live and love, dealing with sin and lust, unity and diversity, faith and reason within a tumultuous cultural milieu and religious rigor, all of which are feeling the winds of changes. Explores medieval literature, noting the astonishing differences from our own time, as well as surprising similarities. Western civilization, our own 21st century, for better or for worse, is indebted to the love and lust of the medievals. | N | LEC | N | GNA | New College of Interdisciplinary Arts and Sciences | School of Humanities, Arts, and Cultural Studies | 3 | | Prerequisite(s): ENG 102, 105 or 108 with C or better; Credit is allowed for only ENG 229 or 294 (Love and Lust in Medieval Lit) |

| ENG | 235 | Introduction to Contemporary Theory | Introduces key ideas and concepts in contemporary critical and cultural theory. In addition to the "posts"--postmodernism, poststructuralism, post-Marxism, postcolonial studies, post-feminism and posthumanism--explores new theoretical formations that have emerged in response to our contemporary social condition, such as queer theory, trauma theory, disability studies, cognitive studies, the new "object-oriented" philosophies and materialist theories. And then there's the "trans" domains--transnationalism, transgender studies and transhumanism--which, like so many contemporary theoretical formations opens up new perspectives on where and how we live, who we are and even what we are. The contemporary theories studied in this course provide the tools for understanding 21st-century life and the limits and enjoyments of our humanity. | N | LEC | N | GNA | College of Liberal Arts and Sciences | Department of English | 3 | | Prerequisite(s): ENG 102, 105, or 108 with C or better; Credit is allowed for only ENG 235 or ENG 294 (Literary Theory & Interdisciplinary Studies) or ENG 294 (Introduction to Contemporary Theory) |

| ENG | 392 | History of Rhetorical Theory | Begins in ancient Greece with the rise of the art of public oratory (known as rhetoric) and ends in the present, an era dominated by mass media. Engages in a great deal of reading--lots of very old writings as well as some newer ones. Covers a great many topics and ideas; focuses by continually returning to the subject of public discourse. Challenging readings designed to emphasize the connection between systems of philosophy (or "worldview") and systems of communication. By focusing on big ideas, students become a better thinker and communicator in any chosen career. | N | LEC | N | GNA | College of Liberal Arts and Sciences | Department of English | 3 | HU | Prerequisite(s): ENG 102, 105, or 108 with C or better |
| ENG | 393 | Theories of Literacy | While theories of literacy have, for the most part, been determined by the primacy of reading and writing script, more recent scholarship in literacy theory and history has served to challenge such limitations. Many contemporary perspectives on literacy view scripted text as one component of complex acts and practices of written communication that occur in social contexts. Studies that examine such communicative acts in their local contexts reveal that literate practices and the texts that are produced are imbued with social and cultural values and traditions and the needs and desires of individuals. As the statements above illustrate, theories of literacy themselves are embedded within the values and assumptions of individuals, institutions, and academic specialization. Examines some of these theories, their influences on academic scholarship and pedagogy, the ideological assumptions that inform them, and how we might view these theories within broader social-cultural landscapes. | N | LEC | N | GNA | College of Liberal Arts and Sciences | Department of English | 3 | | Prerequisite(s): ENG 102, 105, or 108 with C or better OR Visiting University Student |

Takes its theoretical framework from a radical 1960s manifesto called SCUM Manifesto by Valerie Solanas and from the French feminist philosophies of Julia Kristeva, who theorized the abject as a relationship with the grotesque that reveals the deep-seated fear of death. Uses these theoretical positions to examine trash, both abstractly and literally. Works through a variety of concepts ranging from actual trash, garbage, waste, toxic sludge, pollution and dirt, and tackles more abstract notions of trash such as the knowledge produced on the fringe in circuses, amusement parks, "trailer trash" zones, freak shows and the bodies of those marked as "Other" or different. | N | LEC | N | OPT | New College of Interdisciplinary Arts and Sciences | School of Humanities, Arts, and Cultural Studies | 3 | SB & C | Prerequisite(s): ENG 102, 105, or 108 with C or better; minimum 36 hours; Credit is allowed for only AMS 469 or ETH 469 or JHR/MAS 598 (Abject Bodies and the Politics of Trash) or WST 469 OR Visiting University Student |

| FIS | 201 | Innovation in Society | Examines the vast implications of innovation, why it is so powerful, and why it really matters. Introduces the theories and processes of innovation as they relate to socio-political change. Students gain knowledge about the history and future of innovation and explore how innovation is entangled with social, political and ethical issues. By identifying and applying analytical tools, students learn to account for the diverse workings and effects of innovation. This course strives to debunk the myth that innovation happens automatically. Rather, different actors rally to create innovations that shape our society, economy and cultures--and that those innovations are not inevitable and could be otherwise. | N | LEC | N | GNA | College of Global Futures | School for the Future of Innovation in Society | 3 | H | |

| FIS | 305 | Ways of Knowing | Students research, beginning with the concept of research itself and its various purposes, highlighting knowledge and how it is created in different disciplinary approaches. Exposes historical and philosophical underpinnings of how research is conceptualized, presented and implemented, including what constitutes information, knowledge and evidence. Introduces material that is in a traditional research design and methodology course; however, the emphasis uniquely focuses on knowledge creation, innovation, the nature of disciplinary knowledge and its impact on society. Explores the epistemological differences in problem identification and approaches to inquiry in the disciplinary perspectives of engineering, the sciences and in the social sciences. | N | LEC | N | GNA | College of Global Futures | School for the Future of Innovation in Society | 3 | L | Prerequisite(s): ENG 101, 105, or 107 with C or better; minimum 45 hours OR Visiting University Student |
| FIS | 307 | Navigating Futures | Foresight methods and their potentials as entry-points into public discussions about near- and mid-range technoscientific developments. Four elements constitute the organizing axis of the course: (1) the history of foresight exercises in government agencies and business organizations; (2) the methods of four forms of foresight exercises (technology foresight, science and technology studies, anticipatory governance and scenario development); (3) a comparative assessment of these dominant forms; and (4) a group-based application exercise using one of the foresight methods. | N | LEC | N | GNA | College of Global Futures | School for the Future of Innovation in Society | 3 | SB | Prerequisite(s): minimum 45 hours OR Visiting University Student |
| FIS | 308 | Politics, Markets and Innovation | Studies the roles that governments, markets and other factors play in promoting, disseminating and regulating science-based technological innovation. Includes examining the theoretical literature on factors that structure markets and shape diffusion, as well as case studies that illustrate the processes and mechanisms that govern innovations in society. In addition to studying the role of governments, firms and universities, also considers the role of publics as consumers who adopt innovations but also as citizens who may be skeptical of them. Includes case studies in agriculture, health care, biotechnology and digital rights. | N | LEC | N | GNA | College of Global Futures | School for the Future of Innovation in Society | 3 | SB | Prerequisite(s): minimum 45 hours OR Visiting University Student |
| FIS | 331 | Technology and the Modern World | Explores how technological systems are developed and embedded in the modern world with an eye to playing a role in creating better futures. Examines how machines and techniques can shape institutions, relationships and values. Challenges students to envision futures that they want and work to develop strategies for moving us (and our systems) toward those futures. Analyzes technologies past, present and imagined, and describes the ways in which technologies shape our world and the ways in which we shape those technologies. Through repeated practice in class students play a productive role in and even facilitate conversations that tease out the relationships between values and technological systems. | N | LEC | N | GNA | College of Global Futures | School for the Future of Innovation in Society | 3 | | Prerequisite(s): minimum 45 hours |
| FIS | 332 | Risk and the Future | Examines the evolving global risk landscape that is resulting from rapidly increasing global connectivity, tight coupling and massive complexity. Develops an understanding of how innovation in society is changing the risk landscape and considers how innovation in approaches to risk can help navigate this emerging landscape. Topics include technological risk, sociopolitical risk, catastrophic risk, existential risk, converging technologies, perception and uncertainty, anticipation, precaution, uncertainty and risk innovation. | N | LEC | N | GNA | College of Global Futures | School for the Future of Innovation in Society | 3 | L | Prerequisite(s): ENG 101, 105, or 107 with C or better; minimum 45 hours OR Visiting University Student |

| FIS | 334 | Science, Technology and Inequality | Conceptual and theoretical frameworks; provides empirical case studies that contribute to understandings of science and technology as they are used in society. The applications of science and technology in society need to be understood as instrumental to the creation and maintenance of inequality within and between societies. Science and technology does not merely cause or alleviate inequality, but are more profoundly implicated in social relations regarding distribution and access to the benefits of different technologies as well as exposure to risks from science and technology projects in society. The more pervasive and obdurate sources of social distribution are enshrined and entrenched in these scientific and technological systems. | N | LEC | N | GNA | College of Global Futures | School for the Future of Innovation in Society | 3 | C | Prerequisite(s): minimum 45 hours; Credit is allowed for only FIS 334 or JUS 334 |
| FIS | 335 | Designing Knowledge | Provides a foundational understanding of how social organizations make and use knowledge. From research laboratories to biotechnology companies to statistical agencies, many organizations are specifically designed to be knowledge enterprises, enterprises whose primary purpose is to produce knowledge. All organizations in modern societies also operate knowledge systems: systems whose purpose is to create, validate, circulate, communicate and apply knowledge in the making of decisions. Examines how these forms of organization work and contribute to modern societies. | N | LEC | N | GNA | College of Global Futures | School for the Future of Innovation in Society | 3 | SB | Prerequisite(s): minimum 45 hours OR Visiting University Student |
| FIS | 336 | Science and Technology Policy | Science and technology are powerful forces in the modern world. They have been hailed as a way to address everything from world hunger to old age. This does not, however, happen automatically, nor does it always work out the way one presumes. Governments make numerous decisions that affect the direction and application of science and technology, and government policies are affected by a myriad of social, political, and cultural factors. This class will explore the variety of ways in which governments make these policies, how the policies shape the development of science and technology and their applications, and how policy may be shaped to create better futures. Governments around the world have coalesced around the idea that science and technology are necessary for the promotion of the good life. We will examine how they put this idea into action by looking at five interrelated topics: Food, Security/Military, Health, Economy, and Sustainability. | N | LEC | N | GNA | College of Global Futures | School for the Future of Innovation in Society | 3 | | |
| FIS | 337 | Innovation and Global Development | Persistent inequality and poverty continue to plague nations including the USA even in the 21st century. Global development is a complex idea that attempts to address interrelated paradigms of culture, economy, equity, governance, history, societal dynamics, as well as technological issues. | FIS | 403 | Governing Emerging Technologies | Examines the variety of ways in which societies make collective decisions or govern science and technology. Focuses on a particular category of science and technology: the set of emerging technologies like nanotechnology, artificial intelligence and robotics, genetic modification and synthetic biology, cognitive science and neurotechnology, geoengineering, and others that pose particular problems of high stakes, high uncertainty and ambiguous novelty. Closely allied with the research agenda of numerous faculty in the School for the Future of Innovation in Society, especially those in the Center for Nanotechnology in Society, the Risk Innovation Lab, and others; exposes students to inquiry and skills directly from the research front. Students perform numerous research tasks. | N | LEC | N | GNA | College of Global Futures | School for the Future of Innovation in Society | 3 | SB | Prerequisite(s): minimum 45 hours OR Visiting University Student |
| FIS | 431 | Technology, Security and Insecurity in Global Politics | Focuses on the international political aspects of technological change; examines the impact of technological innovation and political change on the international political system. The overall goal is to create an awareness of and ability to analyze and synthesize world events, the particular role of technology, and consider the myriad ways that globalization and technology as a main driver could be changing the international system of nation-states. Technological innovation often takes place within a political context, including international politics, as nation-states and other entities develop technologies within the context of competition and power. There are several issues that run throughout the course as major themes. One is the role of technology in political and social change, and the impact of the latter on the former. | N | LEC | N | GNA | College of Global Futures | School for the Future of Innovation in Society | 3 | | Prerequisite(s): minimum 45 hours |
| FIS | 432 | Problem Solving Through Strategic Thinking | Students learn how to ask questions, brainstorm and communicate ideas, while dealing with uncertain outcomes and unpredictable risks caused by the ideas and solutions they propose. In understanding which ideas and solutions stick and which don't, students learn how different factors influence the birth, life and death of ideas and the socio-technical systems in which ideation exists. Does it matter who asks the questions and proposes the ideas, who is trying to participate, who was there first, if there is a profit or other conflicting motive and the context and the interests that result in certain solutions being picked over others? This course uses exploration learning approaches, where students follow a progression through what they discover, from understanding who they are as individuals, to how ideas are formed and hypothesis made about proposed solutions. | N | LEC | N | GNA | College of Global Futures | School for the Future of Innovation in Society | 3 | | Prerequisite(s): minimum 45 hours |

| FMS | 349 | Israeli Wars in Israeli Movies | From its first day, the State of Israel has been in a state of war with the Arab countries. Every few years, the fighting erupted into an open war. At the beginning of the country, there was a consensus that the wars were forced on the Israelis, and therefore, the heavy toll on human life was unavoidable. Since the Six Day War, 1967, and the political change in 1977, Israeli society is split in attitude toward war. The absolute belief in the political and military leaders was shaken, and new political agendas entered the political arena. To this divided society, the Intifadas occurred with the waves of terrorism. These events added fire to the heated debates in Israel. One means of expression is through the cinema. In this course, students watch, analyze, and discuss selected movies on the Israeli wars and terrorism in the streets of Israel. Through these movies, produced by Israelis, we'll try to understand the mood and attitude of the Israelis toward war, enemies, and political and military leaders. | N | LEC | N | OPT | College of Liberal Arts and Sciences | Department of English | 3 | HU & G | Prerequisite(s): ENG 101, 105, or 107 with C or better; Credit is allowed for only FMS 349 or HEB 349 or JST 346 or HEB 394 (Israeli Wars in Israeli Movies) OR Visiting University Student |

| FSH | 331 | 18th- and 19th-Century European Jewelry Design | The 18th century was defined by stylish sociability that included beautiful dress, sumptuous interiors and exquisite, fashionable jewelry. Who were the influencers for jewelry design during this period? How was society defined by these ornaments? What were the rules of engagement? Did these opulent ornaments affect social strategies? How did jewelry materials evolve into more modern and recognizable forms? All of these questions are answered in this course. The cultural history of jewelry design mirrors the historical and collective customs of society from the established aristocracy, to the rising middle classes, to the expansion of cultural awareness among every world citizen when travel became widely available. So much so, that upon the turn of the 19th century, jewelry design shifted from appearing as solely a status of power and wealth to an eloquent symbol of worldly knowledge and cultural awareness. | N | LEC | N | GNA | Herberger Institute for Design and the Arts | School of Art | 3 | | Prerequisite(s): minimum 45 hours; Credit is allowed for only ARS 331 or FSH 331 or ARS 394 (18th & 19th Century European Jewelry Design) OR Visiting University Student |
| FSH | 335 | Fashion and Dress in Art | Explores fashion and dress from the Renaissance to the modern period and considers dress as commenting on society, gender, race and current events. Explores case studies of art works and of selected decades in European history. Looks at dress in paintings for women, men and children in the context of the ways in which dress variously defined gender, race and class identities, social life and economic wealth in different periods of history. Considers issues of style; changes in clothing production (such as brocades, cotton, silk, furs); and the function of accessories in defining identities in art. Examines fashion magazines, historical events and social change and dress as distinct from fashion. Finally, seeks to understand how art serves to heighten the meaning, display and performance of fashion in terms of the portrait subjects and the intended spectators. | N | LEC | N | GNA | Herberger Institute for Design and the Arts | School of Art | 3 | | Prerequisite(s): minimum 45 hours; Credit is allowed for only ARS 335 or ARS 394 (Fashion and Dress in Art, Ren. to 20th Century) or FSH 335 or FSH 394 (Fashion and Dress in Art, Ren. to 20th Century) OR Visiting University Student |

| FSH | 375 | Fashion Branding Strategies | What is branding? What makes a fashion brand unique? In the trend-oriented fashion world, branding is what encourages consumers to pick one brand over another. For instance, to spend \$100 for a plain white t-shirt from their favorite designer with just one small logo, over the plain white t-shirt from a high-street brand. Branding also enables sneakers to transcend function and wearability to cultural icon status. Fashion branding transforms a company from a business selling product into a trusted friend. How is a brand created? It is a sum of the creative direction bridging product, packaging and consumer interactions that create a holistic identity. Students gain exposure into the evolution of fashion branding, including iconic brand strategies and market disrupters. Covers how to interweave marketing messages and brand communication strategies to utilize storytelling as a central tool in creating a strong brand identity. | N | LEC | N | GNA | Herberger Institute for Design and the Arts | School of Art | 3 | | Prerequisite(s): minimum 45 hours; Credit is allowed for only FSH 375 or FSH 394 (Branding for Future Fashion Professionals) OR Visiting University Student |

| GLG | 327 | Earth's Critical Zone | The Earth's near surface environment (the "critical zone") supports most life and is the dynamic interface between the solid Earth and its fluid envelopes where much of the geologic record is produced. We now know that we face rapid climate change and the consequences of changes in land use, water resources, and ecosystems. Critical to planning a response to, or mitigation of, environmental change is understanding how the Earth surface works. Focuses on how changes to the environment manifest themselves in the critical zone-- in the form and function of the Earth's surface (landforms, water resources, soils, ecosystems). Offers a quantitative introduction to the form and function of the processes impacting the Earth's critical zone to build an understanding of the interactions of physical, chemical and biotic processes in shaping the surface and determining fluid, solute and sediment fluxes. | N | LEC | N | OPT | College of Liberal Arts and Sciences | School of Earth and Space Exploration | 3 | | Prerequisite(s) with C or better: CHM 101 or higher or PHY 101 or higher; both GLG 101 and 103, or both SES 121 and 123, or SES 225; MAT 170, 171, 210, 251, 265, or 270; Credit is allowed for only GLG 327 or SOS 374 OR Visiting University Student |
