ENG	205	Introduction to Writing, Rhetorics and Literacies	How do we understand the ways in which people in systems--both small and large--social, political, and economic, throughout the world use language and other symbolic resources to carry out work? The goal is to strengthen your own repertoire and decision-making power for producing and circulating work (widely defined across material, print, and digital media) that matters in our risk-ridden world. ENG	235	Introduction to Contemporary Theory	Introduces key ideas and concepts in contemporary critical and cultural theory. In addition to the "posts"--postmodernism, poststructuralism, post-Marxism, postcolonial studies, post-feminism and posthumanism--explores new theoretical formations that have emerged in response to our contemporary social condition, such as queer theory, trauma theory, disability studies, cognitive studies, the new "object-oriented" philosophies and materialist theories. And then there's the "trans" domains--transnationalism, transgender studies and transhumanism--which, like so many contemporary theoretical formations opens up new perspectives on where and how we live, who we are and even what we are. The contemporary theories studied in this course provide the tools for understanding 21st-century life and the limits and enjoyments of our humanity. ENG	392	History of Rhetorical Theory	Begins in ancient Greece with the rise of the art of public oratory (known as rhetoric) and ends in the present, an era dominated by mass media. Engages in a great deal of reading--lots of very old writings as well as some newer ones. Covers a great many topics and ideas; focuses by continually returning to the subject of public discourse. Challenging readings designed to emphasize the connection between systems of philosophy (or "worldview") and systems of communication. By focusing on big ideas, students become a better thinker and communicator in any chosen career. ENG	393	Theories of Literacy	While theories of literacy have, for the most part, been determined by the primacy of reading and writing script, more recent scholarship in literacy theory and history has served to challenge such limitations. Many contemporary perspectives on literacy view scripted text as one component of complex acts and practices of written communication that occur in social contexts. Studies that examine such communicative acts in their local contexts reveal that literate practices and the texts that are produced are imbued with social and cultural values and traditions and the needs and desires of individuals. As the statements above illustrate, theories of literacy themselves are embedded within the values and assumptions of individuals, institutions, and academic specialization. Examines some of these theories, their influences on academic scholarship and pedagogy, the ideological assumptions that inform them, and how we might view these theories within broader social-cultural landscapes. Takes its theoretical framework from a radical 1960s manifesto called SCUM Manifesto by Valerie Solanas and from the French feminist philosophies of Julia Kristeva, who theorized the abject as a relationship with the grotesque that reveals the deep-seated fear of death. Uses these theoretical positions to examine trash, both abstractly and literally. Works through a variety of concepts ranging from actual trash, garbage, waste, toxic sludge, pollution and dirt, and tackles more abstract notions of trash such as the knowledge produced on the fringe in circuses, amusement parks, "trailer trash" zones, freak shows and the bodies of those marked as "Other" or different. FIS	334	Science, Technology and Inequality	Conceptual and theoretical frameworks; provides empirical case studies that contribute to understandings of science and technology as they are used in society. The applications of science and technology in society need to be understood as instrumental to the creation and maintenance of inequality within and between societies. Science and technology does not merely cause or alleviate inequality, but are more profoundly implicated in social relations regarding distribution and access to the benefits of different technologies as well as exposure to risks from science and technology projects in society. The more pervasive and obdurate sources of social distribution are enshrined and entrenched in these scientific and technological systems. FIS	335	Designing Knowledge	Provides a foundational understanding of how social organizations make and use knowledge. From research laboratories to biotechnology companies to statistical agencies, many organizations are specifically designed to be knowledge enterprises, enterprises whose primary purpose is to produce knowledge. All organizations in modern societies also operate knowledge systems: systems whose purpose is to create, validate, circulate, communicate and apply knowledge in the making of decisions. Examines how these forms of organization work and contribute to modern societies.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3	SB	Prerequisite(s): minimum 45 hours OR Visiting University Student
FIS	336	Science and Technology Policy	Science and technology are powerful forces in the modern world. They have been hailed as a way to address everything from world hunger to old age. This does not, however, happen automatically, nor does it always work out the way one presumes. Governments make numerous decisions that affect the direction and application of science and technology, and government policies are affected by a myriad of social, political, and cultural factors. This class will explore the variety of ways in which governments make these policies, how the policies shape the development of science and technology and their applications, and how policy may be shaped to create better futures. Governments around the world have coalesced around the idea that science and technology are necessary for the promotion of the good life. We will examine how they put this idea into action by looking at five interrelated topics: Food, Security/Military, Health, Economy, and Sustainability. FIS	431	Technology, Security and Insecurity in Global Politics	Focuses on the international political aspects of technological change; examines the impact of technological innovation and political change on the international political system. The overall goal is to create an awareness of and ability to analyze and synthesize world events, the particular role of technology, and consider the myriad ways that globalization and technology as a main driver could be changing the international system of nation-states. Technological innovation often takes place within a political context, including international politics, as nation-states and other entities develop technologies within the context of competition and power. There are several issues that run throughout the course as major themes. One is the role of technology in political and social change, and the impact of the latter on the former. FIS	432	Problem Solving Through Strategic Thinking	Students learn how to ask questions, brainstorm and communicate ideas, while dealing with uncertain outcomes and unpredictable risks caused by the ideas and solutions they propose. In understanding which ideas and solutions stick and which don't, students learn how different factors influence the birth, life and death of ideas and the socio-technical systems in which ideation exists. Does it matter who asks the questions and proposes the ideas, who is trying to participate, who was there first, if there is a profit or other conflicting motive and the context and the interests that result in certain solutions being picked over others? This course uses exploration learning approaches, where students follow a progression through what they discover, from understanding who they are as individuals, to how ideas are formed and hypothesis made about proposed solutions. Since the Six Day War, 1967, and the political change in 1977, Israeli society is split in attitude toward war. The absolute belief in the political and military leaders was shaken, and new political agendas entered the political arena. Discovers different "Mafias" originating in Italy, but whose reach extends much further, such as the Cosa Nostra in Sicily, the Camorra in Naples, and the 'Ndrangheta in Calabria. Examines the fiction, stereotypes, myths and legends surrounding the mafia through a scrupulous analysis of some of the most important American and Italian films portraying mafia culture. Italians have used the medium of film to address the issue of the mafia, raising awareness about the harsh reality of life in the mafia and the ways in which it reaches into every aspect of Italian politics and society. Explores how Italian mafia films subvert international fascination with the mafioso by disrupting the glamorized myths that are mainly perpetuated by American popular cinema. FSH	331	18th- and 19th-Century European Jewelry Design	The 18th century was defined by stylish sociability that included beautiful dress, sumptuous interiors and exquisite, fashionable jewelry. Who were the influencers for jewelry design during this period? How was society defined by these ornaments? What were the rules of engagement? Did these opulent ornaments affect social strategies? How did jewelry materials evolve into more modern and recognizable forms? All of these questions are answered in this course. The cultural history of jewelry design mirrors the historical and collective customs of society from the established aristocracy, to the rising middle classes, to the expansion of cultural awareness among every world citizen when travel became widely available. So much so, that upon the turn of the 19th century, jewelry design shifted from appearing as solely a status of power and wealth to an eloquent symbol of worldly knowledge and cultural awareness.	N	LEC	N	GNA	Herberger Institute for Design and the Arts	School of Art	3		Prerequisite(s): minimum 45 hours; Credit is allowed for only ARS 331 or FSH 331 or ARS 394 (18th & 19th Century European Jewelry Design) OR Visiting University Student
FSH	335	Fashion and Dress in Visual Culture	Explores fashion and dress from the Renaissance to the modern period and considers dress as commenting on society, gender, race and current events. Explores case studies of art works and of selected decades in European history. Looks at dress in paintings for women, men and children in the context of the ways in which dress variously defined gender, race and class identities, social life and economic wealth in different periods of history. Considers issues of style; changes in clothing production (such as brocades, cotton, silk, furs); and the function of accessories in defining identities in art. Examines fashion magazines, historical events and social change and dress as distinct from fashion. Finally, seeks to understand how art serves to heighten the meaning, display and performance of fashion in terms of the portrait subjects and the intended spectators. FSH	375	Fashion Branding Strategies	What is branding? What makes a fashion brand unique? In the trend-oriented fashion world, branding is what encourages consumers to pick one brand over another. For instance, to spend \$100 for a plain white t-shirt from their favorite designer with just one small logo, over the plain white t-shirt from a high-street brand. Branding also enables sneakers to transcend function and wearability to cultural icon status. Fashion branding transforms a company from a business selling product into a trusted friend. How is a brand created? It is a sum of the creative direction bridging product, packaging and consumer interactions that create a holistic identity. Students gain exposure into the evolution of fashion branding, including iconic brand strategies and market disrupters. Covers how to interweave marketing messages and brand communication strategies to utilize storytelling as a central tool in creating a strong brand identity. In their work with fashion designers, retailers and manufacturers, PR practitioners are involved in almost every aspect of fashion, from forecasting trends and working on designer collections, to launching new lines and helping clients grow their brand. Fundamental skills involve public relations writing and marketing strategy. Students research and write various PR documents including pitches, press releases, fact sheets, backgrounders, bios and blogs focusing on fashion-related topics. Students focus on web-based PR strategies, including social media campaigns and online pressrooms. The course is run as a fashion public relations agency, and students choose a real or fictitious fashion brand (a new client) which they use as the target organization for all assignments. Requires students to complete a full brand strategy and develop both a traditional and digital communications plan for the organization. They need to produce and create all the components of a press kit, as well as a series of public relations writing assignments that include everything from press releases to media pitches. They work on social media calendars and create a social media influencer campaign for the brand. GLG	327	Earth's Critical Zone	The Earth's near surface environment (the "critical zone") supports most life and is the dynamic interface between the solid Earth and its fluid envelopes where much of the geologic record is produced. We now know that we face rapid climate change and the consequences of changes in land use, water resources, and ecosystems. Critical to planning a response to, or mitigation of, environmental change is understanding how the Earth surface works. Focuses on how changes to the environment manifest themselves in the critical zone-- in the form and function of the Earth's surface (landforms, water resources, soils, ecosystems). Offers a quantitative introduction to the form and function of the processes impacting the Earth's critical zone to build an understanding of the interactions of physical, chemical and biotic processes in shaping the surface and determining fluid, solute and sediment fluxes. There is no reflection on what the good development policy looks like or what collective learning we have thus far. Informs students on the complexity of policy making and its relationship to development practices through time. Creates an intellectual space to discuss the practices of global development; uses case studies to enhance students' creativity and skill needed in managing and negotiating critical development challenges. HEB	349	Israeli Wars in Israeli Movies	From its first day, the State of Israel has been in a state of war with the Arab countries. Every few years, the fighting erupted into an open war. At the beginning of the country, there was a consensus that the wars were forced on the Israelis, and therefore, the heavy toll on human life was unavoidable. Since the Six Day War, 1967, and the political change in 1977, Israeli society is split in attitude toward war. The absolute belief in the political and military leaders was shaken, and new political agendas entered the political arena. To this divided society, the Intifadas occurred with the waves of terrorism. These events added fire to the heated debates in Israel. One means of expression is through the cinema. In this course, students watch, analyze, and discuss selected movies on the Israeli wars and terrorism in the streets of Israel. Through these movies, produced by Israelis, we'll try to understand the mood and attitude of the Israelis toward war, enemies, and political and military leaders. HSD	540	Responsible Innovation and Research	Responsible Innovation (RI) and Research is a vision of how values can best be incorporated into the practice of science, technology and innovation (STI). It touches on a host of other similar concepts like Public Interest Technology, Tech for Good, Just Tech and others. At their core, RI and its cognates understand that STI is not a value-free endeavor, and thus it is better to recognize those values and work with them to help assure that our investments in STI are attuned to the goals of science policy as well as to broader public values and the pursuit of a more just, democratic society. Emphasize bringing students to the forefront of the emerging scholarship around RI and related concepts, including perspectives grounded in justice, equity, diversity and inclusion; communicating with colleagues and publics about values and RI in the practice of STI; and performing a real-world project, inquiry or intervention around RI. HSD	550	Prototyping Futures	In this project-based course, students work in interdisciplinary teams to explore and envision the future of communities, industries, technologies and other elements of our society. In this process, students develop their understanding of the application of extended reality technologies, practices and methodologies for design, and tools for applying research to constructing prototypical scenarios for the future, in addition to gaining experience in effective collaboration. This course is about critical, methodological and narrative skills--the ability to move fluidly through domains, create low-fidelity prototypes, and devise creative solutions to complex problems by envisioning new realities. The development of deep technical skills in a chosen field follows in each program. HSD	551	Future-Focused Research Methods	In times of discontinuous change, deep ambiguity and high levels of novelty, the future is characterized by radical uncertainty. Making decisions, choosing policies or organizing community action is complicated by the range of complex potential futures in play. As researchers and practitioners concerned with socio-technical change, what are the tools and methods to grapple with and make sense of uncertainty? This class surveys the field of foresight, drawing from a broad array of scholarly traditions, to catalogue the different methodological approaches to navigate change. Looks to scholars who approach the sociology of time, the dynamics of socio-technical systems, innovation studies, social psychology and futures studies to explore the concept of the future with an eye toward the implications for research methods. Utilizes different ways of thinking about the future to support and develop cognitive, social and organizational capacities to imagine and enact different futures. In doing so, the epistemology of the future is foregrounded, probing the nature and consequences of anticipatory knowledge production. HSD	552	Worldbuilding and Imagination	To make a convincing future, you need to create a convincing world. Storytellers, artists, game designers, politicians and scientists all engage in the practice of building worlds in order to inspire, to question, and sometimes to terrify us. They create narratives, experiences and simulations of places, real and imagined, that combine scientific, cultural and aesthetic forms of knowledge. Why? This course explores the theory and practice of worldbuilding as a way to time travel to the future and the past, as well as to other configurations of the present. It also allows us to better understand the systems we live in and define plans of action to change them for the better. In this way, worldbuilding is a way to create collective visions for the future that inspire change today. Students study a variety of future worlds and build their own through collaborative projects that involve writing, making and public engagement. HSD	555	Strategic Design Futures	Designers are increasingly addressing more strategic and long-term situations, while non-designers are increasingly interested in using design approaches to address diverse challenges. Strategic design is a practice that focuses on formulating strategies (problem setting) rather than only implementing strategies (problem solving). Strategic design is closely related to contemporary and emergent design practices such as user experience design, design thinking, service design, speculative design, behavioral design, and co-design, which are increasingly explored, adopted and adapted in projects and organizations. Students understand and practice a variety of strategic design methods and mindsets with the aim of changing and envisioning futures. With hands-on activities and real-world context, students use and develop core strategic design skills such as visualization, sensemaking, synthesis, speculation and facilitation. Some design tools that may be used include storyboards, user flows, journey mapping, participatory ideation, visioning, service blueprints, prototyping-testing. HST	377	Sports in United States History	Focuses on major themes in American sports history, organized topically around fall sports. Themes encourage students to think critically about relationships among sport and society, identity, community, media, capitalism and education. Also highlights social justice issues in sport as well as athlete activism throughout the twentieth century. Explores the ways in which the participation of Black, Latino/a and Native American athletes has both mirrored and diverged from Black, Latino/a and Native American citizens' participation in society throughout United States history. Also studies the process through which the equal opportunity to participate in school sports became defined as a civil right and, more recently, a human right. HST	378	Poverty, Inequality and Social Justice in Latin America	With persistently high levels of poverty and inequality, Latin America is often considered the most unequal region in the world. Explores these themes in more detail through a case study of one Latin American country and a global intensive experience at the end of the course. By reflecting on the Latin American experience, students gain insights for wealthy countries like the United States where inequality is on the rise. After an exploration of the origins of intercollegiate athletics and the creation of the modern National Collegiate Athletic Association, topics include integration, women's intercollegiate athletics, the big business of amateurism, and scandal. Video lectures, readings and films introduce students to these often controversial topics, grounding them in the historical record. Many of the current debates concerning college sports have been taking place for more than a century. HST	404	Conquest and Encounters in Colonial Latin America	How did Hernan Cortés and Francisco Pizarro defeat the Aztec and Inca Empires? Despite numeric inferiority, limited provisions, and little knowledge about the Americas, Cortés and Pizarro defeated advanced civilizations that had experienced warriors and millions of inhabitants. Possible explanations include the conquistador's valor, advanced weaponry, superior military strategy, Indian allies, and biological attacks. In their encounters with native peoples of the Americas, Europeans were not always conquerors. Álvar Núñez Cabeza de Vaca and Lope de Aguirre failed both in their attempt to conquer a large Indian civilization and in their effort to find mineral wealth. A few Europeans such as Bartolomé de Las Casas spoke out against the abuses committed against the Indians during the conquest. Explores these issues from the perspective of both Europeans and native peoples and looks at the long-term impact for Latin America and its peoples. HST	460	World War II	Explores the causes, conduct and consequences of World War II. When did World War II start? How was it fought, and what did that mean for soldiers, the homefront and millions of civilians in Japanese or German occupied regions? What did the world that emerged in its wake look like? The course explores these fundamental questions with an emphasis on multiple explanations of the causes of the war in Asia and Europe and the contingency of Allied victory. Explores the war as both a total and a global war in which perceptions of race, class and gender shaped the experience of combatants and noncombatants, many of whom died in indiscriminate bombing campaigns. Racial ideologies also led to the brutalization of soldiers, which in turn fueled the violence against civilians, as exemplified by the Holocaust and Japanese war crimes. Finally, the course turns to the global order emerging after the war and the different narratives that emerged from it. Subject	Catalog Nbr	Course Title	Course Description	Allow Mult Enroll	Component Primary	Crse Repeatable	Grading Basis	College	Department	Units	General Studies	Requirements
IPI	241	Designing and Making (Electronics and Programming)	Humanity's future as an interplanetary species is only made possible through the continued development of new technologies able to provide solutions to difficult problems. This course facilitates students developing proficiency in both "making" and "designing," and it seeks to support students in gaining basic technical "makerspace" abilities. More important than the hard skills, students grow in their capacity for technical design thinking--the process by which modern technologies are imagined and developed. Hands-on and project-based, students learn tools and processes for solving global and interplanetary problems with special consideration given to the ways that technologies impact society. Students gain basic proficiency in the electrical, computer programming and design aspects of technology development in makerspaces through supervised research and design of creative projects that relate to aerospace engineering, space exploration and/or an inclusive, interplanetary future. Students also gain a basic knowledge of circuits and soldering, Arduino programming, tinkering and debugging methods, creative problem solving, team-based project management, the relationship between technology and society, and basic technological design methods.	N	LEL	N	GNA	College of Liberal Arts and Sciences	Dean, College of Liberal Arts and Sciences	3		Credit is allowed for only IPI 241 or IPI 294 (Designing and Making for an Interplanetary Future)

IPI	296	Inquiry	To be most effective in work and life, we need to learn how to recognize and solve problems, and to work in teams. Students work together to reach understanding on a large goal associated with human society and space exploration. An example from a previous class is, "What will the Moon be like after human settlement?" As a class, uses a weekly inquiry cycle to step toward the goal: read some content, ask a "natural next question" that takes us one step further toward the goal, seek content to help answer that question, and repeat. Students learn how to understand a complex problem through multiple steps, to approach challenging primary content, to productively critique each other's work, and to think critically. Students meet for 2 hours per week but work extensively outside of class. Hands-on and project-based, students learn tools and processes for solving global and interplanetary problems, with special consideration given to the ways that technologies impact society. Students gain basic proficiency in the mechanical and design aspects of technology development in makerspaces through supervised research and design of creative projects that relate to aerospace engineering, space exploration and/or an inclusive, interplanetary future. Students gain basic knowledge of CAD modeling and 3D printing including the creation of common machine elements (gears, bearings, shafts, springs and fasteners); tinkering and debugging methods; creative problem solving; team-based project management; the relationship between technology and society; and basic technological design methods. ITA	350	Food and Culture: The Mediterranean Lifestyle in Italy	Analyzes the Mediterranean lifestyle (food and eating practices) in Italy from a historical/cultural, scientific and sociological perspective. Students first examine the history and regional cultures of the Mediterranean diet in Italy as they analyze its rich biological diversity and history of cultural exchange. Students then gain an understanding of the critical nutrients of the Mediterranean diet and of the scientific evidence for its health benefits, especially how it can help prevent chronic diseases like obesity and type 2 diabetes, which affect more than half of all adults in the U.S. In addition, students keep a food log for one week, which they then analyze in terms of the critical nutrients of the Mediterranean diet. Finally, Italian food cannot be studied without preparing it! As UNESCO points out, the sharing of food is an important part of the Mediterranean lifestyle. ITA	380	Natural Disasters: Environmental and Cultural Resilience in Italy	The Italian peninsula is home to some of the most diverse physical and geological landscapes on earth. Over time, natural disasters such as earthquakes, volcanic eruptions and landslides have transformed Italian culture, creating a distinct, reciprocal and enduring relationship between nature and Italian society. Studies pivotal natural disasters that have occurred throughout Italian history, including the Mt. Vesuvius, Pompeii and Etna volcanic eruptions; the Messina, Belice Valley, Campania, Friuli and L'Aquila earthquakes; and the Vajont landslide. Identifies and measures the physical and geological features of Italy that make it susceptible to natural disasters. Incorporates a variety of sources designed to give students both a theoretical and practical understanding of Italian culture and natural disasters. Uses class discussions, collaborative projects, creative writing, academic texts, personal narratives, films, videos, guest lectures and current articles. ITA	414	French and Italian Popular Culture	Popular culture no longer holds the ancillary role traditionally reserved for whatever does not carry the definition of high culture. That popular culture is instead able to provide us with very relevant insights on the identity of a nation and a people is now widely accepted. As a consequence, this class aims at examining popular culture-related artifacts in Italy and France in order to shed a light on crucial issues such as the culture of food and its historical and social significance; the meaning of fashion and design within an urban context, with a special attention to gender roles; the importance of the comics, given in particular the exceptional success the bande dessinée genre is currently enjoying in France throughout the whole age range of the population; the show business with a particular attention to music; and the social function and role of sport with respect to the two dominant sports in both countries (soccer and cycling). ITA	423	Italian Organized Crime in Films and History	Through an analysis of historical, anthropological, literary, political and cinematic texts, explores representations of the Italian organized crime in Italian and American films from the early 20th century to today. Discovers different "Mafias" originating in Italy, but whose reach extends much further, such as the Cosa Nostra in Sicily, the Camorra in Naples, and the 'Ndrangheta in Calabria. Examines the fiction, stereotypes, myths and legends surrounding the mafia through a scrupulous analysis of some of the most important American and Italian films portraying mafia culture. Italians have used the medium of film to address the issue of the mafia, raising awareness about the harsh reality of life in the mafia and the ways in which it reaches into every aspect of Italian politics and society. Explores how Italian mafia films subvert international fascination with the mafioso by disrupting the glamorized myths that are mainly perpetuated by American popular cinema. IVD	525	Fundamentals of Entrepreneurial Leadership	"Experiential" course for students to practice "being" a leader at the personal, interpersonal and community levels. While typical leadership classes leave one knowing about leaders and leadership, this class leaves students being leaders as part of their natural self-expression. The program follows an ontological pedagogy, rather than epistemological one. Ontology is the study of the nature and function of being "as lived" in real time. Epistemology by contrast deals with the varieties, grounds, and validity of knowledge. Leadership skills include mastery of communication at each of the three levels, from personal relationships to large-scale messaging for media and branding; and looking beyond the personal and interpersonal sociological level of analysis to incorporate principles of social and environmental justice into their relationships and the enterprises they lead.	N	LEC	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student; Corequisite(s): IVD 560
IVD	560	Innovation Studio I: Discovery and Insight	A prerequisite for successful innovation and venture development is a deep understanding of the multidimensional context in which the innovation will be situated, and in which the venture will compete, whether a commercial enterprise or nonprofit. This course gives students the design, business and engineering research and evaluation tools and experience to investigate and immerse themselves in industry or sector customer needs, the competitive landscape and cultural context, as well as ways to predict and mitigate the unintended consequences of their innovation on society and the environment. Teaches students where to begin, how to inquire, how to evaluate information they uncover, and how to use critical thinking and analysis to develop the insights that become the foundation of their venture-development journey. IVD	561	Innovation Studio II: Problem Reframing	Problem reframing is essential to the innovation process, and to properly diagnosing problems so they can be investigated from multiple perspectives. It entails pushing past conventional assumptions about barriers to success, to find root causes--sometimes different problems altogether--that inspire novel, diverse approaches. Problem reframing is a powerful tool that increases the options and resources available in addressing any challenge. Students learn the difference between root causes and symptoms, understand the systems affected by and affecting their challenge, and learn to see and act on problems as opportunities for breakthrough solutions.	N	STO	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student; IVD 560; Corequisite(s): IVD 525
IVD	562	Innovation Studio III: Explore, Fail, Solve	In this iterative, creative "make-to-learn" phase of venture development, students explore prototyping and testing with audiences or end-users to develop feedback loops for real-time evaluation of their ideas, then synthesize learning from both successes and failures to progress toward a solution. Key components include mastery of ideation and creative development, framing strategic questions and success indicators for prototyping of services or products, evaluation of feedback and iteration of progressively more promising ideas, and evaluation of their innovations measured against the success indicators they developed. Students learn and practice prototyping service interactions as well as product innovations.	N	STO	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student; IVD 525; IVD 561.
IVD	598	Special Topics	Topical courses not offered in regular course rotation (e.g., new courses not in the catalog, courses by visiting faculty, courses on timely topics and highly specialized courses responding to unique student demand). IVD	630	Scaling Entrepreneurial Leadership	The personal skills required to succeed in a small start-up environment are different from those required to run a successful enterprise or nonprofit. Many entrepreneurs do not have access to the learning that prepares them to both launch and successfully scale their venture. Complexities of board management, fostering a creative culture, codifying a communication system that becomes a source of energy and a north star for the organization, inculcating values of social and environmental justice into a culture and translating them into daily behavior are required capacities which cannot be learned in theory, only in practice. Students master the skills to lead an enterprise through the challenges of the 21st century.	N	LEC	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student; Corequisite(s): IVD 562
IVD	660	Innovation Studio IV: Business Model	Faced with the challenge of business model generation and prototyping, students need to define the starting points of value proposition, supply chain and customer segments. Later in the process, a clear description of the revenue model, customer relationship, key resources, key activities, key partners and cost structure complement the original value proposition design. The refinement of the newly created business model is made through a process of iteration. Students have an overall comprehension of the strategic innovation process made of (a) strategy, (b) execution, (c) tools and (d) metrics before moving to the stages of scaling and growth of the business. In order to develop a viable business model, students need to understand the costs of development, manufacturing and getting their goods or services to customers.	N	STO	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student; IVD 525; IVD 560; IVD 561; IVD 562; Corequisite(s): IVD 630
IVD	661	Innovation Studio V: Scale	SCALE is translated as proportional growth of production and profit aiming at a larger market position. Understanding the timing to scale a business model is crucial to its success and scaling can be discussed in terms of market, process and team. Faced with scaling issues of their business models, students need to build their own framework--or tools--in order to make decisions concerning the whens (time) and hows (market, process, tools) of scaling. Topics covered also include, but not limited to, venture funding strategies, budgeting capital needs, developing e-commerce, CRM analytics, supply chain and operations. At the end of this semester, students present a fully developed venture, with clearly articulated market need, viable innovation based on end-user feedback, business model and plan for scale. Where relevant, students register their intellectual property through ASU, using the university's published guidelines and procedures. JHR	378	Poverty, Inequality and Social Justice in Latin America	With persistently high levels of poverty and inequality, Latin America is often considered the most unequal region in the world. This course explores the economic, political, social and geographic origins of poverty and inequality in Latin American countries since independence. It also studies efforts to address the problem by governments, non-governmental organizations, the international community, religious groups and activists. Explores these themes in more detail through a case study of one Latin American country and a global intensive experience at the end of the course. JHR	425	The Politics of Immigration	Examines immigration and citizenship in the United States, with a focus on changes in policy, politics and incorporation trends. While a primary focus is on contemporary politics and policies, also spends much time on immigration and citizenship's legal history and on how scholars use history to reveal new, important insights for our understanding of debates today. Starts with a discussion of migration to the U.S. today and considers theories about international migration. Then moves to the history of immigration and citizenship policies and politics in the U.S. and continues up to present day political and national debates and initiatives. Contains a particular focus on the history, politics and debates around "undocumented"/"illegal"/unauthorized populations, on related citizenship and membership politics. With the continuing national debates, also spends additional time throughout the semester analyzing current reform politics and prospects, along with the different interests and constituencies battling for reform. Readings and assignments feature some of the different disciplinary approaches used in the study of immigration, drawing primarily from political science, history, sociology and anthropology. Aims to gain a better understanding of the different approaches and implications for using different types of methodologies. JHR	441	Latin America and the World Economy	Globalization did not begin in the late twentieth century, but rather global trade has linked Latin America with the rest of the world for over five hundred years. The region has been an active and important participant in the world economy since Columbus's first voyage in 1492. This course explores the social, cultural, economic, and environmental impact of such participation on both Latin America and the rest of the world. It is organized both chronologically and thematically. We will study both colonial and post-colonial trade. The commodities studied include sugar, rubber, bananas, and cocaine. JHR	485	Social Justice and Human Rights Capstone	Senior-level culminating course helps students consolidate their capstone assignments into an intellectual portfolio of written work. Although writing is a critical skillset for academic success, learning how to write is often treated as a secondary pursuit acquired "on the job." Assignments once submitted to fulfill course requirements are soon forgotten, and the labor spent on them is forever lost. This course offers a rare and invaluable opportunity to revisit the writing students have produced in their studies, thinking in highly focused ways about what ideas interest them and why. Students grapple with conventions of social scientific writing, understand how to formulate rigorous research questions and practice drafting structured arguments around key concepts. Additionally, students revise and refine existing papers, trace intersections between them and integrate them into a body of work. Students critically engage with others' work, offering constructive annotated feedback on others' papers while applying the same insights to their own writing. By the end of the course, students create a portfolio representing their best and most promising work. They are able to thoughtfully articulate the knowledge they have acquired over the years, as well as point toward possible trajectories for future research. This culminating experience not only equips students for graduate school, but enhances their skills for a range of professional fields--including law, journalism, policy-making, social work and beyond--where rigorous thinking and writing are essential. Students learn about the historical, political and legal foundations of international human rights concepts, laws and institutions and how to apply a social justice perspective to understand the differential distribution of access to human rights according to inequalities of nationality, race, class, gender and more. Drawing on major disciplinary perspectives in anthropology, sociology, political science and law, provides the core knowledge and skills that students need to succeed in the program as a whole. JHR	503	Gender Based Violence and Sex Trafficking	Following passage of the Palermo Protocol, the first modern global treaty on trafficking in the year 2000, sex trafficking has received enormous global attention. Focuses on the period following the passage of this treaty to understand both the causes and consequences of sex trafficking around the world. Are there patterns associated with victimization? Do traffickers use similar tactics for recruitment? What are countries doing to prosecute traffickers and protect victims? Students conduct guided research developing their expertise on trafficking in one country of their choosing, applying the tools and theories from class to evaluate their chosen case. Course adopts an interdisciplinary perspective drawing on work from political science, sociology, anthropology, counseling, psychology and law. Often draws on literature from feminist criminology studies to account for a more nuanced perspective. Students learn about the roles of international adjudicative bodies like the International Court of Justice (ICJ) and other judicial tribunals in managing global affairs. Focuses on international legal order and global institutional structures; also examines key global political and economic governance organizations and their relationship with States. Specifically, examines international inter-governmental organizations (IGOs) like the United Nations (UN), and its specialized agencies including International Monetary Fund (IMF), World Bank, World Health Organization (WHO), World Intellectual Property Organization (WIPO), and the UN Educational, Scientific and Cultural Organization (UNESCO). Also looks at the role of international nongovernmental organizations (INGOs) such as Amnesty International, Greenpeace, International Red Cross and Red Crescent Movement, and The Global Fund to Fight AIDS, Tuberculosis and Malaria (The Global Fund), and assess their importance as active actors in the area of global governance. JHR	505	Migration, Asylum and Refugees	Interdisciplinary course that introduces students to social scientific debates on migration and displacement in the contemporary world. Over the past decade, recurring wars and natural disasters have driven millions to flee from their homes. According to the United Nations High Commissioner for Refugees (UNHCR), the global number of displaced people is over 70 million, the highest ever recorded since World War II. Now more than ever, it is important to critically examine the social, political and legal processes by which people are displaced and disenfranchised. Delves into social scientific perspectives on forced migration, drawing on essential concepts and theories in anthropology, political theory and international relations. Students question the taken-for-granted distinctions between refugees and "economic migrants," and investigate the historical contexts and institutional structures shaping global displacement that have brought us to our present moment. What does the figure of the refugee reveal about modern conceptualizations of citizenship and the nation-state? How do we think about the violence and precarity of displacement beyond metaphors of "exception," and is it possible to protect the rights of asylum-seekers in conjunction with those of vulnerable citizens? How is the suffering of distant others rendered legible to Western audiences, and how do the conditions of humanitarian work serve to further amplify inequalities between the givers and receivers of aid? The purpose is not to provide an exhaustive summary of various disciplinary approaches to migration, asylum and refugees, but rather, to develop some keen insights into the foundational forces shaping migrant lives and the power relations underpinning our endeavor to alleviate displacement.	N	LEC	N	GNA	New College of Interdisciplinary Arts and Sciences	School of Social and Behavioral Sciences	3		Prerequisite(s): Social Justice and Human Rights MA student; Credit is allowed for only JHR 505 or JHR 598 (Migration, Asylum, and Refugees)

JHR	515	Power and Inequality in Academia and Activism	Centers the perspective of racialized and gendered minorities in academia and in activism in an effort to achieve racial and gender justice in academia and beyond. Covers research, teaching and mentorship in academia and inclusive solidarity and egalitarian political imaginaries in activism. Students read empirical research that helps them navigate racial, gendered and epistemic oppression in research, teaching and mentorship. Students also read empirical research that helps them navigate intersecting forms of oppression within and outside of social justice movements. They then apply these skills to their own thesis, applied projects or capstone projects in collaboration with their peer writing groups, which also function as peer accountability and mentoring groups. The goal is to challenge hierarchical power dynamics in academia and in activism by developing an alternative model of mentorship and an egalitarian way of relating rooted in mutual respect, trust and solidarity. JHR	540	Critical Humanitarianism	Interdisciplinary lecture course introduces students to social scientific debates on humanitarianism, international aid and the ethics of alleviating suffering in the contemporary world. Since its birth in the 19th century, modern humanitarianism has emerged as a powerful actor in world affairs, not only assisting the vulnerable during moments of crisis but shaping politics and governance in its own right. Critically investigates the historical, cultural, institutional and technological contexts of humanitarian action. Rather than taking the morality of "saving lives" as self-evident, this course explores how moral judgements about life are formed, transformed, appropriated and sometimes ignored in the pursuit of humanitarian interests. How does one situate the emergence of humanitarianism in histories of capitalism and abolitionist movements? What definitions of the human are evoked in calls for humanitarian intervention, and how are these definitions sutured by notions of race? Why does the suffering of others evoke humanitarian sympathies and what are the ethical motivations that guide aid workers? How do we hold these ethical callings in tension with various forms of institutional violence perpetrated in humanitarian contexts? How does race shape the construction of both the subjects and objects of humanitarian aid, and what would it mean to decolonize the world of humanitarianism? The purpose is not to provide an exhaustive summary of all the theoretical approaches and empirical issues in humanitarian studies, but to develop some specific insights into what it means to "do good" and how goodness is invariably entangled in contemporary questions of power, politics, violence and history. JST	346	Israeli Wars in Israeli Movies	From its first day, the State of Israel has been in a state of war with the Arab countries. Every few years, the fighting erupted into an open war. At the beginning of the country, there was a consensus that the wars were forced on the Israelis, and therefore, the heavy toll on human life was unavoidable. Since the Six Day War, 1967, and the political change in 1977, Israeli society is split in attitude toward war. The absolute belief in the political and military leaders was shaken, and new political agendas entered the political arena. To this divided society, the Intifadas occurred with the waves of terrorism. These events added fire to the heated debates in Israel. One means of expression is through the cinema. In this course, students watch, analyze, and discuss selected movies on the Israeli wars and terrorism in the streets of Israel. Through these movies, produced by Israelis, we'll try to understand the mood and attitude of the Israelis toward war, enemies, and political and military leaders. JST	459	Latin American Jewish Culture	Focuses on forms of cultural production in Latin America marked by or under the aegis of Jewish diasporic identity from the late nineteenth century to the present. JST	460	World War II	Explores the causes, conduct and consequences of World War II. When did World War II start? How was it fought, and what did that mean for soldiers, the homefront and millions of civilians in Japanese or German occupied regions? What did the world that emerged in its wake look like? The course explores these fundamental questions with an emphasis on multiple explanations of the causes of the war in Asia and Europe and the contingency of Allied victory. Explores the war as both a total and a global war in which perceptions of race, class and gender shaped the experience of combatants and noncombatants, many of whom died in indiscriminate bombing campaigns. Racial ideologies also led to the brutalization of soldiers, which in turn fueled the violence against civilians, as exemplified by the Holocaust and Japanese war crimes. Finally, the course turns to the global order emerging after the war and the different narratives that emerged from it. While a primary focus is on contemporary politics and policies, also spends much time on immigration and citizenship's legal history and on how scholars use history to reveal new, important insights for our understanding of debates today. JUS	656	Human Rights and Sustainability	Addresses the connections between human rights and environmental sustainability. Legal and scholarly approaches linking these areas present new perspectives for addressing some of the greatest challenges of our time, given the important resource dimensions of economic and social rights and the human dimensions of sustainability. Explores these tensions and opportunities by examining three substantive areas: urban ecology and human rights, the human right to food, and the human rights implications of extractive industries such as oil and mining. Following an introduction to the key concepts of human rights and sustainability, explores the substantive areas through theoretical and empirical readings on each; grassroots accounts of struggles over environment-related human rights; and selections from literature and film that illustrate the environmental justice issues at stake. LAS	404	Conquest and Encounters in Colonial Latin America	How did Hernan Cortés and Francisco Pizarro defeat the Aztec and Inca Empires? Despite numeric inferiority, limited provisions, and little knowledge about the Americas, Cortés and Pizarro defeated advanced civilizations that had experienced warriors and millions of inhabitants. Possible explanations include the conquistador's valor, advanced weaponry, superior military strategy, Indian allies, and biological attacks. In their encounters with native peoples of the Americas, Europeans were not always conquerors. Álvar Núñez Cabeza de Vaca and Lope de Aguirre failed both in their attempt to conquer a large Indian civilization and in their effort to find mineral wealth. A few Europeans such as Bartolomé de Las Casas spoke out against the abuses committed against the Indians during the conquest. Explores these issues from the perspective of both Europeans and native peoples and looks at the long-term impact for Latin America and its peoples. LAT	358	Saving the Roman Empire	In his autobiographical epitaph, the Res Gestae, Augustus, founder of the Roman Empire, claimed to have restored Rome to her former glory. His moral, social and political reforms solidified Roman control of the world and the imperial family's hold on ruling her. Through the next five hundred years, as the power of the empire waned and waxed, Augustus's successors turned time and again to reforming the empire and restoring her to her former glory - to saving the Roman Empire. In doing so they had to deal with problems both external and internal; sometimes their ideas worked, often they did not. Ultimately they failed, and Rome and the western empire fell in CE 476. Examines the rise, decline and fall of the Roman Empire from the perspective of internal and external problems the Empire faced, and asks which reforms worked, which did not work, and why. What could have been done differently? Should anything have been done differently, or was the western Roman Empire always doomed?
