ASB	358	The Yoruba and the Atlantic World	The Yoruba in the African diaspora is how Africans, separated from their home country and scattered in a new land, managed to retain their traditions and reform their identities. The slave trade led to the spreading of African culture, religion, dance, art and music from one hemisphere to another and contributed to the cultural diversity of the New World. Allows students to trace the experiences of one African cultural group throughout the cycle of the slave experience in the Americas. Utilizes different sources or approaches (e.g., anthropology, archaeology, written document, oral tradition) to provide an understanding of how the Yoruba were integrated into the Atlantic world, the transformations of Yoruba identities and culture, and the strategies for resistance employed by the Yoruba in the New World.	N	LEC	N	GNA	College of Liberal Arts and Sciences	School of Human Evolution and Social Change	3		Prerequisite(s): minimum 30 hours; Credit is allowed for only AFR 358 or ASB 358 or AFS 394/ASB 394/HST 394/SGS 394 (Yoruba in the African Diaspora World) OR Visiting University Student

ASB	363	From Cells to Society: Understanding Complexity	Equips students with concepts and empirical examples they need to understand the role of complexity in the world around them. Complexity science is based on the fundamental principle that entities and phenomena in the world around us are systems composed of many parts that interact to produce their global characteristics. For example, cells interact to produce organs and tissues, which in turn interact to produce physiological processes (i.e., the capacity to metabolize food to produce new compounds and energy) and physical infrastructure (skeletal and muscular structure) which produce organisms. Organisms, (e.g., humans) interact to form groups, villages, cities, nations. ASB	442	Global Cities	This close look at megacities in the global south decisively challenges the outdated impression that the rest of the world's cities still lag way behind the U.S. and Europe. The social sciences' debate over "global cities" anchors our examination of the reorganization of metropolitan social space under impact of neoliberal globalization since the 1970s. Explores urban inequalities of slums and dreamworlds; compares vernacular and transnational styles of urbanism (in architecture, design, markets, consumerism, jobs, ads, ways of living); and asks how transnational flows of people, capital and culture have reconfigured ethnic relations and national identities rooted in global cities. Students become virtual transnational flâneurs, tacking between the slums and skyscrapers of global cities, and conduct guided research on a global megacity to investigate how the production of the global city changes the lived space and urban culture of local residents, and how they respond. We ask, whose city is it? BIO	112	Discovery: Why Sex?	"Why?" is a question that animates the youngest of children to the most seasoned of scientists. The acts of asking and answering "Why?" highlight the integrated nature of scientific knowledge and discovery. Demonstrates scientific disciplines are not walled cities in which knowledge is neatly segregated from lines of inquiry and knowledge in other disciplines. Instead, scientific concepts weave throughout and between disciplines and scientists increasingly rely on colleagues from different scientific fields to find answers to scientific questions. So our journey to find responses to the question "Why Sex?" takes us not just to biology, but also to earth science and to physics. Along the way, scientists are linked together not only through concepts that crosscut the disciplines, but also in their reliance upon key scientific skills such as the ability to observe, think critically, measure, gather data and communicate their findings. BMY	505	The Ethos of Biomimicry: A Pathway from Practice to Philosophy	How ought we act toward nature as a result of practicing biomimicry? Explores this question in the context of a biologically informed philosophical worldview about life and the place of humans in it. Uses an inquiry-based approach to explore how practicing biomimicry can catalyze a recognition of nature beyond merely that of its instrumental value. Offers a pragmatic approach to deriving a life-inclusive ethic from the practice itself and offers a pathway toward its adoption based on both moral intuition and moral reasoning. Facilitates the articulation of a compelling and pragmatic ethic to complement the practice and, in turn, discourages "shallow" biomimicry. CAS	501	Fundamentals of Complex Systems Science: Evolution	The enormous diversity of biological, social and technological systems is the product of evolution. As Darwin put it poetically: "There is grandeur in this view of life, with its several powers, having been originally breathed by the Creator into a few forms or into one; and that, whilst this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning endless forms most beautiful and most wonderful have been and are being evolved." In short, complexity is the product of evolutionary processes. This, in turn, implies that understanding complexity requires us to understand its evolutionary origins. This course is a comprehensive introduction to the evolutionary history of complex systems and the principles and mechanisms that guide this dynamic. Covers the consequences of evolutionary history of complex systems, such as vulnerability to failure or limits of the potential of these systems to change and adapt. CAS	502	Fundamentals of Complex Systems Science: Computation	Most if not all fields of research rely on computers and an increasing number of researchers employ computational methods to collect or analyze data. Coding is found more and more often as a tool in the researcher's toolbox. This is especially true when modeling and studying complex systems. However, knowing how to program is just one piece of the puzzle. To develop robust computational solutions that are sustainable, maintainable and trustworthy requires additional skills and knowledge. This course gives an overview of technologies, best practices and processes that every complexity researcher should be aware of and employ in their programming work. Students learn how to develop maintainable code, get hands-on experiences with tools that can help increase code quality and become familiar with software development best practices.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	503	Fundamentals of Complex Systems Science: Collectives	From neurons in a brain to fish in a school to people in an economy, collectives are all around us. These are complex systems in which we understand in some detail how the individual components behave and interact, but the behavior we are interested in is at the larger scale of the aggregate. The behavior of systems like these is challenging to predict and understand largely due to the sheer number of interacting components, as well as the unintuitive way that contributions from individuals scale up to have large collective effects. Complex systems science has developed an array of conceptual tools to help understand collective behavior. Explores these foundational concepts, including emergence, scaling laws, dynamical modes and coarse-graining. Uses these tools to de-mystify powerful aggregate-scale effects, from impressive feats of swarm intelligence to potentially harmful instabilities and hysteresis. CAS	520	Agent-Based Modeling	Agent-based modeling is a method to study the macro-level consequences of micro-level interactions of agents representing individuals, households, firms or other type of actors. Agent-based modeling is used to study the dynamics of complex adaptive systems across different domain areas. Covers the basics of agent-based modeling including programming computer simulations and how this method is used to study complex adaptive systems in different application areas. Examines the method for scientific research, especially the various ways of doing model analysis. Students perform individual assignments.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	521	Methods for Complex Systems Science: Network Analysis	Network science within the framework of complex adaptive systems. Begins with general introductions to different kinds of networks and their basic network properties. Then progresses to the mathematics and algorithms of network analysis while learning about computational feasibility and the importance of random graph comparisons. Each week students are responsible for readings and a write-up of that week's topics. These write-ups help build toward the final assignment incorporating all topics covered in this class. Upon completion, students should feel confident incorporating networks and their associated complexity into their research and worldview.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	522	Methods for Complex Systems Science: Dynamical Systems	Focuses on the mechanisms through which complexity emerges in evolving and dynamical network architectures. Some of the best-known examples include gene expression networks, adaptive ecological networks, and neural networks for cognitive information processing. Complex systems theory deals with dynamical systems with a large number of interacting variables. Therefore, after an introduction to graph and network theory, the course covers the basic concepts of dynamical systems theory: continuous and discrete systems, attractor dynamics, bifurcation, and chaos. After introducing information theory, devoted to the fundamentals, the second part focuses on applications, especially to network dynamics. Students acquire familiarity through the analysis of concrete examples of both deterministic and random dynamics in the form of Boolean networks and random walks.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	523	Methods for Complex Systems Science: Statistics and Dimensionality Reduction	Because complex systems involve a large number of interacting components, observational studies of these systems typically generate data sets of high dimension. Examples include the hundreds or thousands of distinct neurons in a brain, genes in a cell, people in a society, firms in an economy, or texts in a corpus. To make sense of such data, a diverse set of data analytic tools has been developed to summarize key properties at the population level (statistics) and characterize predictable lower-dimensional patterns (dimensionality reduction). Provides a guided tour of such tools most relevant to complex adaptive systems. With a solid foundation in inferential statistics, students encounter PCA-type linear projections, nonlinear manifold techniques, topic modeling, clustering methods, network statistics, as well as more abstract foundations for how these methods work and when they fail. Students hone their data skills by applying state-of-the-art open-source software to real-world datasets. CAS	540	Socioecological Complex Systems	We live in a world that is neither wholly human nor wholly natural. Human decisions and actions combine with biological processes and physical forces transform cities, rural landscapes, ecosystems and biogeography, river systems, coastlines and the atmosphere. By emphasizing the importance of networks and feedbacks, complexity science is especially helpful in providing insight into the complex interactions between the human and natural components of the socioecological systems that are so critical to our lives and wellbeing. Examines key concepts for understanding socioecological system dynamics from a complex systems perspective. Explores how methods drawn from complexity science can trace the complex web of feedbacks between social, biological and geophysical processes and help to better understand and plan for change and stability in socioecological systems. Also looks at how complexity science can help contribute to relevant policy and governance for SES. CAS	541	Complex Urban Systems	Despite occupying only a tiny fraction of the world's area, cities house over half of earth's human population, consume over two thirds of global energy, and emit over 70% of global CO2 emissions. It is estimated that the combined ecological footprint of earth's urban areas already exceeds the entire area of our planet, and still globally 3 million more people migrate to cities every week. Cities are also the global engines of innovation, wealth creation, and production efficiencies. Thus, cities are both drivers of unsustainable behavior and our best hope for innovating sustainable solutions. Examines key concepts for understanding the complexity of urban systems, and explores how methods drawn from complexity science can be applied to urban structures and dynamics to better understand both past and future outcomes. Shows how complexity science might contribute to relevant policy and governance of cities and whether such a contribution is advisable. CAS	542	Sustainability as a Problem Complexity	Sustainability challenges are complex challenges. Sustainability as a problem of complexity explores in a systematic way the interconnected nature of sustainability challenges and presents a complex systems science-based framework for developing sustainability solutions.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	543	Complexity Economics	Complexity economics is the study of economic systems as evolving, complex systems. These systems consist of interacting individuals who perceive their environments, and take actions based on multiple criteria, which in turn affect their environments and the decisions available to other individuals. Complexity economics is not an extension of conventional, neo-classical economic theory and practice, which is based on the concepts of equilibrium, optimization and aggregation. Complexity economic attempts to understand economic phenomena through concepts of evolution, emergence, path dependency and the interdependent relationships between heterogenous individuals whose actions shape their environments. This offers a new basis for theory and practice that better reflects not only real problems and scenarios, but also how individuals make decisions and how those decisions have consequences for both the environment and society.	N	LEC	N	GNA	College of Global Futures	School of Complex Adaptive Systems	3		Prerequisite(s): degree- or nondegree-seeking graduate student
CAS	544	Innovation in Complex System	Innovation is a central property of complex systems. Without innovation there would be no evolution of complex systems. Explores the dynamics of innovation in complex systems across a number of different domains, including biological, social, cultural and technological innovations. Focuses on the common principles and differences guiding innovation dynamics. Also focuses on unintended consequences of innovation, such as cascading effects and innovation traps and investigates why certain systems fail to innovate. Identifies common features of innovation across complex systems. CAS	545	Disease as a Complex System	Disease and failure are properties of complex systems. All organisms, groups, societies, technologies, ecosystems and the planetary system are complex systems. Disease can be seen as a failure in complex system function and has, at its root cause, the breakdown of complex regulatory structures that maintain function and facilitate adaptation. Comprehensive introduction into the origins, mechanisms and consequences of disease in a number of complex systems ranging from organisms to the planet and the technosphere. Explores disease, failure and health of these systems and investigates the underlying complex systems properties that are responsible for these different states. Identifies common features of failure across complex systems. CAS	546	Bio-Inspired AI and Optimization	Provides a survey of a variety of algorithms for optimization and multiagent control that are inspired by natural systems. Algorithms inspired by biological or physical systems can often be viewed as idealized models of those antecedent systems. Consequently, also explores potential problems (and solutions) in these algorithms that are analogous to fundamental but less well-known issues in the biological and physical systems that inspire them. CEL	307	Reason and Revelation: Medieval Political Thought	Examines classics of medieval political philosophy across Christianity, Judaism and Islam, including such thinkers as Thomas Aquinas, William of Ockham, Maimonides, Averroes and al-Farabi, asking such questions as: What can we know about the good by nature? Can reason suffice for determining laws governing the common good or do human beings need recourse to divine revelation? Is God bound by natural law or is God's will independent of reason? Students examine what modern thinkers have to say about various political and philosophical topics such as liberty, equality, the state of nature, natural rights, laws of nature, the social contract, democracy, republicanism, popular sovereignty, the purpose and limits of government, the relationship between politics and religion, and the relationship between reason and tradition. Students consider the extent to which these thinkers and their political thought have shaped--and should or should not inform--contemporary political life. CEL	324	Science, Society and Faith: Gaming the Galileo Affair	Do religion and science complement each other or conflict? What are the limits of religious authority in political society? How do political forces affect religious institutions--and vice versa? Explores these and other questions primarily through an immersive historical role-playing game, "The Trial of Galileo: Aristotelianism, the 'New Cosmology,' and the Catholic Church," which takes place in 17th century Rome as bishops, professors and scientists confront findings of modern science that clash with the Aristotelian cosmology which had informed Catholic philosophy and teaching for centuries. Beyond close reading of primary texts from the era, students assume roles, from Cardinals and Jesuits to members of the Medici family, the Italian scientist Federico Cesi and, of course, Galileo himself. They engage in debates over the nature of faith and the role of science in obtaining knowledge about the world, and ultimately hold Galileo Galilei's infamous trial. CEL	331	Debating American Constitutionalism: The Founding	Was the U.S. Constitution a mistake? During the constitutional ratification debates of 1787-88, the Anti-Federalists argued that it would be, while the Federalists maintained that it structured the government well and that it was the best governing document possible under the circumstances. This course examines the arguments, ideas and questions raised by the Federalists and Anti-Federalists. Their debates provide resources to understand and contribute to contemporary political and constitutional debates, and they model how intellectually deep, and morally serious, public discourse can be. Also studies their arguments and applies them to our current politics, while considering the rhetorical and other demands placed upon statesmen in constitutional, democratic systems. Additionally, considers the arguments of critics of American constitutionalism in American history and in the present day, as well as proposals to amend the Constitution. CEL	350	Philosophy, Politics and Economics	Prepares the foundation for students to become active participants as citizens and leaders in a liberal democratic society that faces an uncertain future. Provides familiarity with core conceptual tools provided by philosophy, politics and economics, and an appreciation for the foundation they provide together to address social and political uncertainties we face today as well as in the future. Reliance on any one disciplinary set of tools and skills is useful, of course, but the real challenges of any liberal democracy are met by neither technocratic nor bureaucratic solutions. They require an awareness of the relevance of ethics, politics and economics, as well as an appreciation for the limitations of each and the necessity of thinking through their interactions. Then considers leading political ideas connected with each of the great upheavals that began with the American Revolution and ended, 50 years later, with the independence of Latin America. Examines the record of political leadership during the same episodes, via biographies of figures such as Washington and Jefferson, Sièyes and Robespierre, Toussaint and Napoleon, Bolivar and San Martin. CEL	390	Leading a Life of Meaning: Liberal Learning and You	Allows ASU students from a variety of disciplines to encounter liberal education, classic texts and Socratic seminars in an intensive, supportive and beautiful environment. Explores a fundamental question: How do I live a life of meaning? Students read thinkers ranging from Aristotle, Plutarch and Cicero to Viktor Frankl, Toni Morrison and Marge Piercy--and bring to bear their own life experiences--to understand concepts of love, friendship, work, community, citizenship and identity in relation to living an examined life. Expands these studies through practical experiences of service work, meditation and film to create a vital cohort and intellectual community. A central assessment for the course, the Organic Reflective Assessment (ORA), is a series of prompts and responses designed to allow students to think about and receive feedback from professors regarding the practice and methods of liberal learning: how to read texts and annotate them, how to ask questions of authors, how to think about one's own life in relation to and using language from classic texts--on the idea that to use existing, perhaps even widely known, language and relate it to our lives is a way to make our ideas known to ourselves and others. Students need to keep up with these ORA responses during the retreat. It is also the most widely misinterpreted. In China, Daoists, Buddhists and Confucians have each taken its short, pithy statements as warrant for their very different belief systems. In the West, missionaries, new-age pundits, hippies, rock-stars, mystics and LSD advocates each claim to understand the "true meaning" of Laozi's mystical words. But "the farther one travels, the less one knows..." Students read representative samples of these explanations to understand why this brief book of wisdom has endured for over 2000 years. CTE	110	Introduction to Culture, Technology and Environment	Investigates the dominant critical perspectives about three of the most fundamental constituents of human civilization: culture, environment and technology. The attention to the interaction and interdependence between environment and technologies (old and new) has been recently rising. Brings in culture--from the biological to the mammal--as another node to the approach, helping students realize the co-existence of these aspects in our life, to see how these topics interact, and the profound influence they have on contemporary issues. After introducing various notions of culture, environment and technology, draws on concrete, hands-on and interactive case studies that epitomize how culture, environment and technology have been connected throughout human history and, indeed, have shaped the modern, technologized and globalized world in which humans and their nonhuman planet mates live today. EGR	557	Foldable Robotics	Organized around new types of robots being developed in research labs and industry across the country, foldable robots are designed and built using layered, flat sheets of a wide variety of materials and folded up to create both form and motion. Design of these devices begins with initial prototypes and proceeds through implementation and optimization, with a focus on application-specific projects that seek to solve problems of cost, parallelism, complexity and time using a relatively fast and easy prototyping method. Students delve deeper into the analytical problems associated with foldable mechanisms in topics such as design, kinematics, manufacturing, dynamics, simulation, optimization and stiffness analysis. EGR	560	Vehicle Dynamics and Control	Covers modeling, estimation, control and optimization of a typical vehicle (sub)system dynamics. Recent advances in automotive technology, such as vehicle electrification and automated/connected driving, further complicate vehicle (sub)systems as nonlinear multi-input-multi-output systems with unmodeled dynamics, structure uncertainties and external disturbances. Thus, effective vehicle control design requires to sophisticatedly combine advanced control theory with knowledge of vehicle characteristics. To achieve this goal, the course introduces a variety of modeling, advanced control, estimation and optimization techniques for typical vehicle (sub)systems. Discusses applications of control theories to various vehicle (sub)system dynamics through examples inspired by pertinent research projects. Extensively utilizes co-simulation between Matlab/Simulink and CarSim® for vehicle dynamics analysis, vehicle control design and verification.	N	LEC	N	GNA	Ira A. ENG	205	Introduction to Writing, Rhetorics and Literacies	How do we understand the ways in which people in systems--both small and large--social, political, and economic, throughout the world use language and other symbolic resources to carry out work? Three fields of study take this kind of questioning especially seriously: studies in writing, studies in rhetoric, and studies in literacy. Inquiry--that persistent, deliberate commitment to question and to build methods sufficient to that questioning--is a generative force in each of these fields of study. Familiarizes students with such questioning traditions and to help them judge for themselves what each is good for. The goal is to strengthen your own repertoire and decision-making power for producing and circulating work (widely defined across material, print, and digital media) that matters in our risk-ridden world. Quite simply, then, this is a course in asking good questions and in evaluating responses to situations that spur questioning. And then there's the "trans" domains--transnationalism, transgender studies and transhumanism--which, like so many contemporary theoretical formations opens up new perspectives on where and how we live, who we are and even what we are. The contemporary theories studied in this course provide the tools for understanding 21st-century life and the limits and enjoyments of our humanity. ENG	392	History of Rhetorical Theory	Begins in ancient Greece with the rise of the art of public oratory (known as rhetoric) and ends in the present, an era dominated by mass media. Engages in a great deal of reading--lots of very old writings as well as some newer ones. Covers a great many topics and ideas; focuses by continually returning to the subject of public discourse. By focusing on big ideas, students become a better thinker and communicator in any chosen career. ENG	393	Theories of Literacy	While theories of literacy have, for the most part, been determined by the primacy of reading and writing script, more recent scholarship in literacy theory and history has served to challenge such limitations. Many contemporary perspectives on literacy view scripted text as one component of complex acts and practices of written communication that occur in social contexts. Studies that examine such communicative acts in their local contexts reveal that literate practices and the texts that are produced are imbued with social and cultural values and traditions and the needs and desires of individuals. As the statements above illustrate, theories of literacy themselves are embedded within the values and assumptions of individuals, institutions, and academic specialization. Examines some of these theories, their influences on academic scholarship and pedagogy, the ideological assumptions that inform them, and how we might view these theories within broader social-cultural landscapes. ENG	451	The Writer in Context or Collaboration: Interdisciplinary Study	Serves as a culminating experience and is open to writers in all genres. Bearing in mind that writers tend to make their writing lives while also doing other things--to pay the rent, to enrich the writing--this course foregrounds the interdisciplinary skills fostered by (and necessary to) a life in creative writing. Focuses on the potential relationship between writing and the visual arts. Studies multi-genre works in order to see the flexible, critical, cross-disciplinary aspects of the field and to absorb new strategies from another angle of approach. Given the increasingly image-saturated nature of 21st-century life, this particular nexus (visual and literary, image and text) seems especially relevant. In a recent lecture, Airee Dee Matthews, winner of the Yale Series of Younger Poets, author most recently of "Bread and Circus," and leader in visio-textual poetics, suggested we are already in the future that the Futurists of the early 20th century predicted, where we are being "trained to be the eye of the machine"--as well as passive purveyors of whatever the machine doles out to us. (Think: social media.) She passionately argues that only through visio-textual work can any artist fully engage a contemporary audience and draw them beyond the surfaces of our pervasive visual culture and into the "logical, emotional and political spheres of subjectivity" necessary to connection and communication. Hybrid works permit the coexistence of both lyric stillness and visual or digital discursiveness (i.e., fluidity/expansiveness), potentially offering clarity of thought in the midst of layers of observation, stimulation and paradox. How does writing anchor and deepen our experience and how does it help us to understand visual arts strategies and effects? ENG	481	Advanced Creative Nonfiction	For strong writers and impressive thinkers. Gets students thinking more deeply about their own craft choices and figuring out ways to experiment and maybe even fail in areas where they feel the weakest, while also learning how to recognize the specific quirks, talents or flairs that make them unique as a creative writer. To that end, starts with short in-class writing exercises aimed at challenging students as creative nonfiction writers and helping clarify their own writerly identity. Then launches into workshops where the goal is not to "fix" anyone's works of creative nonfiction, but instead to encourage each student to articulate and refine his or her own inner editor and critic. Students read essays, literary journalism and short memoir by established writers throughout the semester, using those as craft guides of a sort, as well as pleasure reading. Students must be active, thoughtful and respectful participants during discussions of outside essays and throughout workshops. Successful students turn in new and exciting works of creative nonfiction, ideally ones that challenge them as writers but that are written with sufficient time to revise and fine tune them before the workshop takes place. Finally, students are supportive members of the writing community in our classroom and, via the literary magazine activity, participants in the larger writer community as well. EPF	508	Education for Ecological and Social Justice	While social justice education importantly focuses on power dynamics, intercultural conviviality and action for social change, its predominant emphasis on the "social" sphere risks overlooking the embeddedness of human systems within ecological systems. At the same time, analyzing environmental issues through a social justice lens allows for deeper examination of their human dimensions and unequal impacts. Any environmental education that looks to be truly sustainable, inclusive and momentous must incorporate principles of social justice into the curricular vision and pedagogical approach. This course uses an interdisciplinary approach to examine social and environmental issues in education globally. Explores how current world events and the climate crisis intersect with socio-ecological concerns. Prepares emerging scholars to address complex, real-world problems through a holistic justice-oriented perspective. EPF	512	Education, Imagination and Futures Thinking	To realize just and sustainable planetary futures, educators must inspire and enable learners of all ages to engage and influence planetary challenges. To transcend the limitations of conventional thinking, educators can enlist the power of imagination and mobilize the tools of future thinking to organize new opportunities in formal and informal learning settings. This course examines ideas and tools that position learners to envision, co-design and explore the role of education for planetary futures. EPF	517	Inquiry for Transformation	Explores advanced techniques and methodologies for inquiry, examines the ethical dimensions of inquiry, and understands how transformational inquiry can lead to equitable and sustainable change. Thought provoking and designed for those seeking to lead and innovate in an ever-changing world. Builds on the fundamental concepts of theoretical and methodological tools and diverse knowledge traditions of inquiry to empower students with the understanding required to engage in transformational research projects that allows them to actively address real-world issues. Explores the intersection of inquiry and social justice, discovering how inquiry can be a driving force behind environmental, social and political transformation. Students not only gain a deeper understanding of the transformative power of inquiry, but embark on a journey of self-transformation and societal impact, exploring the art of inquiry as a multifaceted instrument for transformation. EPF	529	Systems Change for Planetary Futures: Pathways for Collective Action	The urgency of the ecological crisis calls for individual and collective action. As the crisis escalates, this action cannot be limited to knowledge production solely focused on technical innovations and scientific solutions but requires a cultural shift toward more sustainable planetary futures. Introduces existing and emerging sustainability and climate action networks, which are mobilizing the power of education for transformative change across different contexts. Examines concrete strategies, tactics and approaches for activating shifts in the political, economic, and cultural foundations of education in ways that challenge the status quo and open opportunities for envisioning, articulating and enacting alternatives. Focuses on mobilizing collective action among people and organizations that may not normally collaborate, ranging from youth climate activists and interest groups, to local education authorities and transnational institutions. ETH	469	Trash Talk	Examines the possibilities inherent in "theorizing from the gutter"; looking at the world not from a lofty "Ivory Tower" but from the slime, the muck, the dumpster, the trash heap, the wasteland, the discarded and the downtrodden. Takes its theoretical framework from a radical 1960s manifesto called SCUM Manifesto by Valerie Solanas and from the French feminist philosophies of Julia Kristeva, who theorized the abject as a relationship with the grotesque that reveals the deep-seated fear of death. Uses these theoretical positions to examine trash, both abstractly and literally. Works through a variety of concepts ranging from actual trash, garbage, waste, toxic sludge, pollution and dirt, and tackles more abstract notions of trash such as the knowledge produced on the fringe in circuses, amusement parks, "trailer trash" zones, freak shows and the bodies of those marked as "Other" or different. FAS	533	Advanced Studies in Family Diversity	Emphasizes issues of diversity to better understand the context of the individual within the family and within society, with a focus on family systems theory and larger systemic issues affecting diversity, utilizing intersectionality and critical race theory. Today, families--and by extension, neighborhoods, cities, governing states and nations--are more diverse in terms of structure, culture, ethnicity, sexuality and religious/philosophical ideology, than at any other point in history. At the same time, common intrapersonal (within individuals) and interpersonal (between individuals) experiences are shared transpersonally (across groups, across cultures and across borders). Explores risk and protective factors associated with ethnoracial, physical, religious and sexual diversity, as well as resilience, prevention strategies and future directions. Atypical course in its approach to diversity issues in that it does not examine families by categorizing them into groups that are viewed as monolithic and unchanging. In this way, students should not expect to learn about "Asian Americans" or "Latinos" or "African families"; rather, students should gain an enhanced appreciation of the reciprocal influence of historical, cultural, ethnic, economic and political diversity on social interaction and constructions. FIS	334	Science, Technology and Inequality	Conceptual and theoretical frameworks; provides empirical case studies that contribute to understandings of science and technology as they are used in society. The applications of science and technology in society need to be understood as instrumental to the creation and maintenance of inequality within and between societies. Science and technology does not merely cause or alleviate inequality, but are more profoundly implicated in social relations regarding distribution and access to the benefits of different technologies as well as exposure to risks from science and technology projects in society. The more pervasive and obdurate sources of social distribution are enshrined and entrenched in these scientific and technological systems.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3	GCSI OR C	Prerequisite(s): minimum 45 hours; Credit is allowed for only FIS 334 or JUS 334
FIS	335	Designing Knowledge	Provides a foundational understanding of how social organizations make and use knowledge. From research laboratories to biotechnology companies to statistical agencies, many organizations are specifically designed to be knowledge enterprises, enterprises whose primary purpose is to produce knowledge. All organizations in modern societies also operate knowledge systems: systems whose purpose is to create, validate, circulate, communicate and apply knowledge in the making of decisions. Examines how these forms of organization work and contribute to modern societies. FIS	336	Science and Technology Policy	Science and technology are powerful forces in the modern world. They have been hailed as a way to address everything from world hunger to old age. This does not, however, happen automatically, nor does it always work out the way one presumes. Governments make numerous decisions that affect the direction and application of science and technology, and government policies are affected by a myriad of social, political, and cultural factors. This class will explore the variety of ways in which governments make these policies, how the policies shape the development of science and technology and their applications, and how policy may be shaped to create better futures. Governments around the world have coalesced around the idea that science and technology are necessary for the promotion of the good life. We will examine how they put this idea into action by looking at five interrelated topics: Food, Security/Military, Health, Economy, and Sustainability.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3		
FIS	337	Innovation and Global Development	Persistent inequality and poverty continue to plague nations including the USA even in the 21st century. Global development is a complex idea that attempts to address interrelated paradigms of culture, economy, equity, governance, history, societal dynamics, as well as technological issues. Using the framework of the Sustainable Development Goals 2030 (SDGs) this course examines, analyzes and critiques indicators of SDGs as well as explores innovative measures of development that nations around the world are planning and implementing in order to improve the lives of their citizens now and for the future. FIS	400	Sea Turtles, Sharks and Fisheries of Baja California	Uses Baja California, Mexico as a model to examine the integration of science, practice, socioeconomics and culture in the context of coastal conservation. During spring break, students travel to Baja California, Mexico, a region known for its rich diversity of fisheries, wildlife including seasonal and resident marine megafauna populations (e.g., sea turtles, sharks, seabirds, sea lions, dolphins and whales) and deep cultural connections with marine resources.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3		Prerequisite(s): minimum 45 hours; Credit is allowed for only FIS 400 or FIS 494 (Sea Turtles, Sharks, & Fisheries of Baja California) or SEA 400 OR Visiting University Student
FIS	403	Governing Emerging Technologies	Examines the variety of ways in which societies make collective decisions or govern science and technology. Focuses on a particular category of science and technology: the set of emerging technologies like nanotechnology, artificial intelligence and robotics, genetic modification and synthetic biology, cognitive science and neurotechnology, geoengineering, and others that pose particular problems of high stakes, high uncertainty and ambiguous novelty. Closely allied with the research agenda of numerous faculty in the School for the Future of Innovation in Society, especially those in the Center for Nanotechnology in Society, the Risk Innovation Lab, and others; exposes students to inquiry and skills directly from the research front. Students perform numerous research tasks.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3	SB	Prerequisite(s): minimum 45 hours OR Visiting University Student
FIS	431	Technology, Security and Insecurity in Global Politics	Focuses on the international political aspects of technological change; examines the impact of technological innovation and political change on the international political system. The overall goal is to create an awareness of and ability to analyze and synthesize world events, the particular role of technology, and consider the myriad ways that globalization and technology as a main driver could be changing the international system of nation-states. Technological innovation often takes place within a political context, including international politics, as nation-states and other entities develop technologies within the context of competition and power. There are several issues that run throughout the course as major themes. One is the role of technology in political and social change, and the impact of the latter on the former.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3		Prerequisite(s): minimum 45 hours
FIS	432	Problem Solving Through Strategic Thinking	Students learn how to ask questions, brainstorm and communicate ideas, while dealing with uncertain outcomes and unpredictable risks caused by the ideas and solutions they propose. In understanding which ideas and solutions stick and which don't, students learn how different factors influence the birth, life and death of ideas and the socio-technical systems in which ideation exists. Does it matter who asks the questions and proposes the ideas, who is trying to participate, who was there first, if there is a profit or other conflicting motive and the context and the interests that result in certain solutions being picked over others? This course uses exploration learning approaches, where students follow a progression through what they discover, from understanding who they are as individuals, to how ideas are formed and hypothesis made about proposed solutions.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3		Prerequisite(s): minimum 45 hours
FIS	444	Environment and Justice	Explores issues of environment and justice. Topics include environmental risk, environmental health, environmental amenities, control of land, environmental careers and their relationship to past and present forms of social inequality as well as forms of redressing these problems through environmental justice activism. Students gain real-world experience and develop skills in project management, including planning, implementing and evaluating a complete project cycle. Allows students to manage both client-based projects and team relationships to complete projects. Students carry out project-based research, conduct interviews and meetings, make site visits, develop work plans and scope of works, negotiate clear deliverables with clients, implement projects and give public presentations. Presentations are grounded in the idea of conducting effective science communication. FMS	349	Israeli Wars in Israeli Movies	From its first day, the State of Israel has been in a state of war with the Arab countries. Every few years, the fighting erupted into an open war. At the beginning of the country, there was a consensus that the wars were forced on the Israelis, and therefore, the heavy toll on human life was unavoidable. Since the Six Day War, 1967, and the political change in 1977, Israeli society is split in attitude toward war. The absolute belief in the political and military leaders was shaken, and new political agendas entered the political arena. To this divided society, the Intifadas occurred with the waves of terrorism. These events added fire to the heated debates in Israel. One means of expression is through the cinema. In this course, students watch, analyze, and discuss selected movies on the Israeli wars and terrorism in the streets of Israel. Through these movies, produced by Israelis, we'll try to understand the mood and attitude of the Israelis toward war, enemies, and political and military leaders.
