IPI	196	Fundamentals of Inquiry	Introduces the fundamentals of using inquiry methods for knowledge creation and extension in the fields of science and technology. Students work together to reach understanding on a large goal question associated with human society and space exploration. As a class, uses a weekly inquiry cycle to step toward the goal: read some content, ask a 'Natural Next Question' (NNQ) that takes us one step further toward the goal, seek content to help answer that question, report on what was learned, and after a few times, summarize the new knowledge with a distillation exercise, and then repeat this inquiry cycle. Strongly focuses on teaching students how to guide their learning by asking productive questions to drive their research, how to find content to answer their questions, how to approach challenging primary content, how to work well in teams, and how to distill and share their learning.	N	LEL	N	GNA	College of Liberal Arts and Sciences	Dean, College of Liberal Arts and Sciences	3		Prerequisite(s): Technological Leadership BS major OR Visiting University Student
IPI	241	Designing and Making (Electronics and Programming)	Humanity's future as an interplanetary species is only made possible through the continued development of new technologies able to provide solutions to difficult problems. This course facilitates students developing proficiency in both "making" and "designing," and it seeks to support students in gaining basic technical "makerspace" abilities. More important than the hard skills, students grow in their capacity for technical design thinking--the process by which modern technologies are imagined and developed. Hands-on and project-based, students learn tools and processes for solving global and interplanetary problems with special consideration given to the ways that technologies impact society. Students gain basic proficiency in the electrical, computer programming and design aspects of technology development in makerspaces through supervised research and design of creative projects that relate to aerospace engineering, space exploration and/or an inclusive, interplanetary future. Students also gain a basic knowledge of circuits and soldering, Arduino programming, tinkering and debugging methods, creative problem solving, team-based project management, the relationship between technology and society, and basic technological design methods.	N	LEL	N	GNA	College of Liberal Arts and Sciences	Dean, College of Liberal Arts and Sciences	3		Credit is allowed for only IPI 241 or IPI 294 (Designing and Making for an Interplanetary Future)

IPI	296	Inquiry	To be most effective in work and life, we need to learn how to recognize and solve problems, and to work in teams. Students work together to reach understanding on a large goal associated with human society and space exploration. An example from a previous class is, "What will the Moon be like after human settlement?" As a class, uses a weekly inquiry cycle to step toward the goal: read some content, ask a "natural next question" that takes us one step further toward the goal, seek content to help answer that question, and repeat. Students learn how to understand a complex problem through multiple steps, to approach challenging primary content, to productively critique each other's work, and to think critically. Students meet for 2 hours per week but work extensively outside of class. ITA	380	Natural Disasters: Environmental and Cultural Resilience in Italy	The Italian peninsula is home to some of the most diverse physical and geological landscapes on earth. Over time, natural disasters such as earthquakes, volcanic eruptions and landslides have transformed Italian culture, creating a distinct, reciprocal and enduring relationship between nature and Italian society. Studies pivotal natural disasters that have occurred throughout Italian history, including the Mt. Vesuvius, Pompeii and Etna volcanic eruptions; the Messina, Belice Valley, Campania, Friuli and L'Aquila earthquakes; and the Vajont landslide. Identifies and measures the physical and geological features of Italy that make it susceptible to natural disasters. Incorporates a variety of sources designed to give students both a theoretical and practical understanding of Italian culture and natural disasters. ITA	414	French and Italian Popular Culture	Popular culture no longer holds the ancillary role traditionally reserved for whatever does not carry the definition of high culture. That popular culture is instead able to provide us with very relevant insights on the identity of a nation and a people is now widely accepted. As a consequence, this class aims at examining popular culture-related artifacts in Italy and France in order to shed a light on crucial issues such as the culture of food and its historical and social significance; the meaning of fashion and design within an urban context, with a special attention to gender roles; the importance of the comics, given in particular the exceptional success the bande dessinée genre is currently enjoying in France throughout the whole age range of the population; the show business with a particular attention to music; and the social function and role of sport with respect to the two dominant sports in both countries (soccer and cycling). ITA	423	Italian Organized Crime in Films and History	Through an analysis of historical, anthropological, literary, political and cinematic texts, explores representations of the Italian organized crime in Italian and American films from the early 20th century to today. Discovers different "Mafias" originating in Italy, but whose reach extends much further, such as the Cosa Nostra in Sicily, the Camorra in Naples, and the 'Ndrangheta in Calabria. Examines the fiction, stereotypes, myths and legends surrounding the mafia through a scrupulous analysis of some of the most important American and Italian films portraying mafia culture. Italians have used the medium of film to address the issue of the mafia, raising awareness about the harsh reality of life in the mafia and the ways in which it reaches into every aspect of Italian politics and society. Explores how Italian mafia films subvert international fascination with the mafioso by disrupting the glamorized myths that are mainly perpetuated by American popular cinema. IVD	525	Fundamentals of Entrepreneurial Leadership	"Experiential" course for students to practice "being" a leader at the personal, interpersonal and community levels. While typical leadership classes leave one knowing about leaders and leadership, this class leaves students being leaders as part of their natural self-expression. The program follows an ontological pedagogy, rather than epistemological one. Ontology is the study of the nature and function of being "as lived" in real time. Epistemology by contrast deals with the varieties, grounds, and validity of knowledge. Leadership skills include mastery of communication at each of the three levels, from personal relationships to large-scale messaging for media and branding; and looking beyond the personal and interpersonal sociological level of analysis to incorporate principles of social and environmental justice into their relationships and the enterprises they lead.	N	LEC	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student; Corequisite(s): IVD 560
IVD	560	Innovation Studio I: Discovery and Insight	A prerequisite for successful innovation and venture development is a deep understanding of the multidimensional context in which the innovation will be situated, and in which the venture will compete, whether a commercial enterprise or nonprofit. This course gives students the design, business and engineering research and evaluation tools and experience to investigate and immerse themselves in industry or sector customer needs, the competitive landscape and cultural context, as well as ways to predict and mitigate the unintended consequences of their innovation on society and the environment. Teaches students where to begin, how to inquire, how to evaluate information they uncover, and how to use critical thinking and analysis to develop the insights that become the foundation of their venture-development journey.	N	STO	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student
IVD	561	Innovation Studio II: Problem Reframing	Problem reframing is essential to the innovation process, and to properly diagnosing problems so they can be investigated from multiple perspectives. It entails pushing past conventional assumptions about barriers to success, to find root causes--sometimes different problems altogether--that inspire novel, diverse approaches. Problem reframing is a powerful tool that increases the options and resources available in addressing any challenge. Students learn the difference between root causes and symptoms, understand the systems affected by and affecting their challenge, and learn to see and act on problems as opportunities for breakthrough solutions. IVD	562	Innovation Studio III: Explore, Fail, Solve	In this iterative, creative "make-to-learn" phase of venture development, students explore prototyping and testing with audiences or end-users to develop feedback loops for real-time evaluation of their ideas, then synthesize learning from both successes and failures to progress toward a solution. Key components include mastery of ideation and creative development, framing strategic questions and success indicators for prototyping of services or products, evaluation of feedback and iteration of progressively more promising ideas, and evaluation of their innovations measured against the success indicators they developed. Students learn and practice prototyping service interactions as well as product innovations.	N	STO	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student; IVD 525; IVD 561.

IVD	630	Scaling Entrepreneurial Leadership	The personal skills required to succeed in a small start-up environment are different from those required to run a successful enterprise or nonprofit. Many entrepreneurs do not have access to the learning that prepares them to both launch and successfully scale their venture. Complexities of board management, fostering a creative culture, codifying a communication system that becomes a source of energy and a north star for the organization, inculcating values of social and environmental justice into a culture and translating them into daily behavior are required capacities which cannot be learned in theory, only in practice. Students master the skills to lead an enterprise through the challenges of the 21st century.	N	LEC	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student; Corequisite(s): IVD 562
IVD	660	Innovation Studio IV: Business Model	Faced with the challenge of business model generation and prototyping, students need to define the starting points of value proposition, supply chain and customer segments. Later in the process, a clear description of the revenue model, customer relationship, key resources, key activities, key partners and cost structure complement the original value proposition design. The refinement of the newly created business model is made through a process of iteration. Students have an overall comprehension of the strategic innovation process made of (a) strategy, (b) execution, (c) tools and (d) metrics before moving to the stages of scaling and growth of the business. In order to develop a viable business model, students need to understand the costs of development, manufacturing and getting their goods or services to customers.	N	STO	N	GNA	Herberger Institute for Design and the Arts	The Design School	3		Prerequisite(s): Innovation and Venture Development MS student; IVD 525; IVD 560; IVD 561; IVD 562; Corequisite(s): IVD 630
IVD	661	Innovation Studio V: Scale	SCALE is translated as proportional growth of production and profit aiming at a larger market position. Understanding the timing to scale a business model is crucial to its success and scaling can be discussed in terms of market, process and team. Faced with scaling issues of their business models, students need to build their own framework--or tools--in order to make decisions concerning the whens (time) and hows (market, process, tools) of scaling. Topics covered also include, but not limited to, venture funding strategies, budgeting capital needs, developing e-commerce, CRM analytics, supply chain and operations. At the end of this semester, students present a fully developed venture, with clearly articulated market need, viable innovation based on end-user feedback, business model and plan for scale. Where relevant, students register their intellectual property through ASU, using the university's published guidelines and procedures.	N	STO	N	GNA	Herberger Institute for Design and the Arts	The Design School	6		Prerequisite(s): IVD 525; IVD 560; IVD 561; IVD 562; IVD 630; IVD 660

While a primary focus is on contemporary politics and policies, also spends much time on immigration and citizenship's legal history and on how scholars use history to reveal new, important insights for our understanding of debates today. Starts with a discussion of migration to the U.S. today and considers theories about international migration. Then moves to the history of immigration and citizenship policies and politics in the U.S. and continues up to present day political and national debates and initiatives. Contains a particular focus on the history, politics and debates around "undocumented"/"illegal"/unauthorized populations, on related citizenship and membership politics. With the continuing national debates, also spends additional time throughout the semester analyzing current reform politics and prospects, along with the different interests and constituencies battling for reform. Readings and assignments feature some of the different disciplinary approaches used in the study of immigration, drawing primarily from political science, history, sociology and anthropology. Bridges our understanding of the evolving technical and scientific aspects of measurement theory and practice with historical and contemporary perspectives on environmental and regulatory policy. Traces the origins of the uneven distribution of environmental problems across communities of color and poor communities, examines ways to measure environmental inequality, and analyzes how environmental problems--both human made and natural--reflect and exacerbate social inequality. JHR	441	Latin America and the World Economy	Globalization did not begin in the late twentieth century, but rather global trade has linked Latin America with the rest of the world for over five hundred years. The region has been an active and important participant in the world economy since Columbus's first voyage in 1492. This course explores the social, cultural, economic, and environmental impact of such participation on both Latin America and the rest of the world. It is organized both chronologically and thematically. We will study both colonial and post-colonial trade. The commodities studied include sugar, rubber, bananas, and cocaine. JHR	485	Social Justice and Human Rights Capstone	Senior-level culminating course helps students consolidate their capstone assignments into an intellectual portfolio of written work. Although writing is a critical skillset for academic success, learning how to write is often treated as a secondary pursuit acquired "on the job." Assignments once submitted to fulfill course requirements are soon forgotten, and the labor spent on them is forever lost. This course offers a rare and invaluable opportunity to revisit the writing students have produced in their studies, thinking in highly focused ways about what ideas interest them and why. Students grapple with conventions of social scientific writing, understand how to formulate rigorous research questions and practice drafting structured arguments around key concepts. Additionally, students revise and refine existing papers, trace intersections between them and integrate them into a body of work. Students critically engage with others' work, offering constructive annotated feedback on others' papers while applying the same insights to their own writing. By the end of the course, students create a portfolio representing their best and most promising work. They are able to thoughtfully articulate the knowledge they have acquired over the years, as well as point toward possible trajectories for future research. This culminating experience not only equips students for graduate school, but enhances their skills for a range of professional fields--including law, journalism, policy-making, social work and beyond--where rigorous thinking and writing are essential. JHR	503	Gender Based Violence and Sex Trafficking	Following passage of the Palermo Protocol, the first modern global treaty on trafficking in the year 2000, sex trafficking has received enormous global attention. Focuses on the period following the passage of this treaty to understand both the causes and consequences of sex trafficking around the world. Are there patterns associated with victimization? Do traffickers use similar tactics for recruitment? What are countries doing to prosecute traffickers and protect victims? Students conduct guided research developing their expertise on trafficking in one country of their choosing, applying the tools and theories from class to evaluate their chosen case. Course adopts an interdisciplinary perspective drawing on work from political science, sociology, anthropology, counseling, psychology and law. Often draws on literature from feminist criminology studies to account for a more nuanced perspective. Focuses on international legal order and global institutional structures; also examines key global political and economic governance organizations and their relationship with States. JHR	505	Migration, Asylum and Refugees	Interdisciplinary course that introduces students to social scientific debates on migration and displacement in the contemporary world. Over the past decade, recurring wars and natural disasters have driven millions to flee from their homes. According to the United Nations High Commissioner for Refugees (UNHCR), the global number of displaced people is over 70 million, the highest ever recorded since World War II. Now more than ever, it is important to critically examine the social, political and legal processes by which people are displaced and disenfranchised. Delves into social scientific perspectives on forced migration, drawing on essential concepts and theories in anthropology, political theory and international relations. Students question the taken-for-granted distinctions between refugees and "economic migrants," and investigate the historical contexts and institutional structures shaping global displacement that have brought us to our present moment. What does the figure of the refugee reveal about modern conceptualizations of citizenship and the nation-state? How do we think about the violence and precarity of displacement beyond metaphors of "exception," and is it possible to protect the rights of asylum-seekers in conjunction with those of vulnerable citizens? How is the suffering of distant others rendered legible to Western audiences, and how do the conditions of humanitarian work serve to further amplify inequalities between the givers and receivers of aid? The purpose is not to provide an exhaustive summary of various disciplinary approaches to migration, asylum and refugees, but rather, to develop some keen insights into the foundational forces shaping migrant lives and the power relations underpinning our endeavor to alleviate displacement.	N	LEC	N	GNA	New College of Interdisciplinary Arts and Sciences	School of Social and Behavioral Sciences	3		Prerequisite(s): Social Justice and Human Rights MA student; Credit is allowed for only JHR 505 or JHR 598 (Migration, Asylum, and Refugees)

JHR	515	Power and Inequality in Academia and Activism	Centers the perspective of racialized and gendered minorities in academia and in activism in an effort to achieve racial and gender justice in academia and beyond. Covers research, teaching and mentorship in academia and inclusive solidarity and egalitarian political imaginaries in activism. Students read empirical research that helps them navigate racial, gendered and epistemic oppression in research, teaching and mentorship. Students also read empirical research that helps them navigate intersecting forms of oppression within and outside of social justice movements. They then apply these skills to their own thesis, applied projects or capstone projects in collaboration with their peer writing groups, which also function as peer accountability and mentoring groups. The goal is to challenge hierarchical power dynamics in academia and in activism by developing an alternative model of mentorship and an egalitarian way of relating rooted in mutual respect, trust and solidarity. JHR	540	Critical Humanitarianism	Interdisciplinary lecture course introduces students to social scientific debates on humanitarianism, international aid and the ethics of alleviating suffering in the contemporary world. Since its birth in the 19th century, modern humanitarianism has emerged as a powerful actor in world affairs, not only assisting the vulnerable during moments of crisis but shaping politics and governance in its own right. Critically investigates the historical, cultural, institutional and technological contexts of humanitarian action. Rather than taking the morality of "saving lives" as self-evident, this course explores how moral judgements about life are formed, transformed, appropriated and sometimes ignored in the pursuit of humanitarian interests. How does one situate the emergence of humanitarianism in histories of capitalism and abolitionist movements? What definitions of the human are evoked in calls for humanitarian intervention, and how are these definitions sutured by notions of race? Why does the suffering of others evoke humanitarian sympathies and what are the ethical motivations that guide aid workers? How do we hold these ethical callings in tension with various forms of institutional violence perpetrated in humanitarian contexts? How does race shape the construction of both the subjects and objects of humanitarian aid, and what would it mean to decolonize the world of humanitarianism? The purpose is not to provide an exhaustive summary of all the theoretical approaches and empirical issues in humanitarian studies, but to develop some specific insights into what it means to "do good" and how goodness is invariably entangled in contemporary questions of power, politics, violence and history. JST	346	Israeli Wars in Israeli Movies	From its first day, the State of Israel has been in a state of war with the Arab countries. Every few years, the fighting erupted into an open war. At the beginning of the country, there was a consensus that the wars were forced on the Israelis, and therefore, the heavy toll on human life was unavoidable. Since the Six Day War, 1967, and the political change in 1977, Israeli society is split in attitude toward war. The absolute belief in the political and military leaders was shaken, and new political agendas entered the political arena. To this divided society, the Intifadas occurred with the waves of terrorism. These events added fire to the heated debates in Israel. One means of expression is through the cinema. In this course, students watch, analyze, and discuss selected movies on the Israeli wars and terrorism in the streets of Israel. Through these movies, produced by Israelis, we'll try to understand the mood and attitude of the Israelis toward war, enemies, and political and military leaders. The course explores these fundamental questions with an emphasis on multiple explanations of the causes of the war in Asia and Europe and the contingency of Allied victory. Explores the war as both a total and a global war in which perceptions of race, class and gender shaped the experience of combatants and noncombatants, many of whom died in indiscriminate bombing campaigns. Racial ideologies also led to the brutalization of soldiers, which in turn fueled the violence against civilians, as exemplified by the Holocaust and Japanese war crimes. JUS	327	Music and Justice: Revolutionary Measures	Examines music and its diverse role in society, including its impact on social and political control as well as its relationship to justice. Since the beginning of recorded history, music has played a significant role in the production of formal and informal social control. Societies use music as part of ritual and religious worship, entertainment, expression, communication and aesthetic pleasure as well as a means of political protest. However, music has also been effectively used by states, from liberal democracies to dictatorships, to compel obedience whether through propaganda or torture in inflicting and/or exacerbating pain and suffering. Indeed, current research reveals the powerful effects of music at a cellular level to mobilize people. JUS	565	Critical and Comparative Issues in Disability	Examines the construction of disability as a social, cultural and political phenomenon. Focuses on how disability is defined and represented in society as well as the implications/consequences of such definitions. Hegemonic understandings of disability typically have employed narrow medical and therapeutic explanations. From such deterministic perspectives, the disabled individual often has been defined as deviant, stigmatized, incompetent and marginal. This class rejects the perception of disability as a functional impairment that limits a person's activities. Instead, disability is a construct that finds its meaning and representation within a social and cultural context. Accordingly, examines the ideologies that such representations can conceal in order to crack the hegemonic façade, challenging the ways in which disability is perceived and treated by the dominant society. JUS	656	Human Rights and Sustainability	Addresses the connections between human rights and environmental sustainability. Legal and scholarly approaches linking these areas present new perspectives for addressing some of the greatest challenges of our time, given the important resource dimensions of economic and social rights and the human dimensions of sustainability. LAS	404	Conquest and Encounters in Colonial Latin America	How did Hernan Cortés and Francisco Pizarro defeat the Aztec and Inca Empires? Despite numeric inferiority, limited provisions, and little knowledge about the Americas, Cortés and Pizarro defeated advanced civilizations that had experienced warriors and millions of inhabitants. Possible explanations include the conquistador's valor, advanced weaponry, superior military strategy, Indian allies, and biological attacks. In their encounters with native peoples of the Americas, Europeans were not always conquerors. Álvar Núñez Cabeza de Vaca and Lope de Aguirre failed both in their attempt to conquer a large Indian civilization and in their effort to find mineral wealth. A few Europeans such as Bartolomé de Las Casas spoke out against the abuses committed against the Indians during the conquest. Explores these issues from the perspective of both Europeans and native peoples and looks at the long-term impact for Latin America and its peoples. LAT	358	Saving the Roman Empire	In his autobiographical epitaph, the Res Gestae, Augustus, founder of the Roman Empire, claimed to have restored Rome to her former glory. His moral, social and political reforms solidified Roman control of the world and the imperial family's hold on ruling her. Through the next five hundred years, as the power of the empire waned and waxed, Augustus's successors turned time and again to reforming the empire and restoring her to her former glory - to saving the Roman Empire. In doing so they had to deal with problems both external and internal; sometimes their ideas worked, often they did not. Ultimately they failed, and Rome and the western empire fell in CE 476. Examines the rise, decline and fall of the Roman Empire from the perspective of internal and external problems the Empire faced, and asks which reforms worked, which did not work, and why. MCO	425	Digital Media Literacy I	Helps students begin to navigate the 21st-century media, starting by becoming active users of media, not just passive consumers. The Internet-fueled democratization of media creation has enabled anyone to be a publisher, and given audiences' almost infinite choices, with both great and questionable effects. In a world of information abundance, it can be difficult to discern fact from opinion and truth from fiction. We need to know how to wade through this barrage of information with a critical eye, to be better informed, and ultimately become creators of media ourselves.	N	LEC	N	GNA	Walter Cronkite School of Journalism and Mass Communication	Walter Cronkite School of Journalism and Mass Communication	3		Prerequisite(s): minimum 2.00 GPA; Credit is allowed for only MCO 425 or MCO 494 (Digital Media Literacy) OR Visiting University Student

MCO	427	Misinformation and Society	Develops strategies and tactics to recognize misinformation, and inoculates students--and helps them join the battle--against it. Misinformation in our context is false information purposefully created to deceive and cause harm. It runs rampant in today's digital information ecosystem, and is becoming more and more sophisticated and difficult to spot. Bad actors are using powerful tools and techniques to infect our information supply, sowing confusion and discord. While there are laudable efforts to staunch the flow of misinformation, media users need help in deciding what information to trust. Examines the evolution of misinformation and the range of content types that fall under its umbrella. Explores tools, techniques and tactics that individuals can employ to identify misinformation, and gives them a head start on making informed decisions on what, and whom, they can trust. MCO	428	Digital Media and Freedom of Expression in the 21st Century	Covers the extraordinary nature of media in this century. Examines how the media and communications tools of the past 100+ years-- telephones, print publications and broadcasting outlets--gave way to the Internet, a radically centralized network of networks that is rapidly re-centralizing. Also explores how the ability to exercise freedom of expression became radically easier in the early days of the Internet, but how that freedom, among others, may be in jeopardy--and, if so, what can be done about that, as individuals and members of communities. Higher EQ has been found to have many key benefits to both individuals and organizations, including: communicating more effectively across the organization; better collaboration, resulting in high-functioning teams; building positive and supportive connections; and creating a more resilient and supportive culture. This course shows how leveraging a higher EQ provides benefits such as: improving resilience through effectively managing stress and anxiety; managing conflict by enhancing skills such as assertiveness, listening and empathy; addressing workplace culture, such as biases and microaggressions; and building and exhibiting self-confidence, in part through executive presence. Uses lectures, class discussions, self-assessments, simulations and interactive exercises to help students become more self-aware of the skills needed to develop to advance careers. Students understand themselves better and are given access to tools and techniques to learn needed skills and develop an action plan. The EQIP (EQ Improvement Plan) helps students grow EQ and build next-level leadership potential.	N	LEL	N	GNA	W. P. OGL	540	Evidence-Based Inquiry in Organizational Leadership	Provides a broad understanding of the methodological issues involved in leadership research. As such, exposes students to the assumptions, principles and applications of a selected set of research methods, whether inductive, deductive or abductive. Largely hands on with a focus on discussion and exercises. OGL	550	Leading Organizational Change	Organizations are a combination of structures, processes and relationships that bring people together to achieve a common goal. However, organizations do not operate in isolation--they are embedded in complex social, political and financial contexts. Leadership requires individuals to discern and balance competing demands and tensions inherent in organizations. Provides an overview of organizational theories to help leaders understand and be effective in these contexts. By looking at organizations through metaphorical lenses such as machines, brains and organisms, students learn how to create new options for organizational success in ever-changing operating environments. Applies theories to case studies to develop insights and innovative approaches to organizational change. A student deliverable is the creation of a plan to map out the student's capstone project in preparation for the applied project.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Organizational Leadership MS student; OGL 520; OGL 530; OGL 540

All of this occurs within the context of expanding knowledge of leadership skills and abilities. Encourages students to take every opportunity to learn about and bring insights to bear in classroom discussions. Shapes the leader within so that students are best positioned to lead in all areas of life. Over the next few weeks, explores the essential knowledge, abilities and values relevant to effective leadership. OGL	556	Leadership for Wicked Environmental Problems	Environmental leadership promotes a societal change such that we move away from the perspective where economic growth is valued and takes precedence above all to one that both recognizes the limits and value of natural resources in our environment and embraces just conservation practice. The environmental challenges we are faced with today (e.g., climate change, renewable energy) are described as "wicked." Wicked problems are difficult to explain, plainly define, have no one solution, and are often the result of other indefinable problems. Environmental leadership focuses on engaging followers to jointly and creatively confront wicked challenges and promotes environmental justice addressing the relationship between social inequality and environmental quality among various stakeholders. Course critically evaluates these leadership dimensions. This examination is not limited to Western ideals found in corporate organizations but also extends to conservation practice in the developing world.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Liberal Studies, Master of Project Management, Organizational Leadership MS, or Organizational Leadership graduate certificate student
OGL	558	Leading Organizational Innovation	Every modern organization, regardless of sector or mission, needs leaders who understand the impacts of continuing innovation on organizational success and sustainability. Examines how leadership can facilitate innovative activities within every level of an organization. Students conduct independent research for integration into a collaborative team project in the development of a graphical conceptual model that includes factors such as culture, structure and collaborative activities that enhance organizational innovation.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Liberal Studies, Master of Project Management, Organizational Leadership MS, or Organizational Leadership graduate certificate student
OGL	559	Modeling Systems and Stakeholders	Studies how leaders can use systems theory and stakeholder theory to assess the inputs from external stakeholders and their impacts on internal organizational systems. Using current literature, students work independently and in teams to build and apply a conceptual model of the significant relationships among organizational systems and stakeholders. Results highlight relationships among variables that can be tested using quantitative and/or qualitative research methods.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Organizational Leadership MS student
OGL	561	Collaborative Governance: NGOs and Private-Public Partnerships	Exposes students to the opportunities and challenges of the non-market, non-state realm of nongovernmental organizations and how they facilitate private-public partnerships. OGL	562	Resource Development in Organizations: A Multiple Capitals Approach	Many types of resources are needed for organizations to achieve long-term sustainability. Surveys various capital resources firms need to succeed. Covers tools such as the International Integrated Reporting Council's six capitals framework (financial, manufactured, intellectual, human, social, natural) and theories that undergird these models. Through readings, case studies, and assignments, students learn about the process of value creation; the relationship between resources and an organization's business model; how the various forms of capital can be measured and reported; and what leaders can do to intentionally develop multiple forms of capital in a way that creates financial returns for the organization.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Liberal Studies, Master of Project Management, Organizational Leadership MS, or Organizational Leadership graduate certificate student
OGL	563	Leading Social Change: Community Activism	Focuses on methods used to reform social, cultural or political norms, beginning at the local level and connecting with movements for broader social change. Grassroots movements arise on all sides of the political spectrum, and local movements can unite activists around common goals despite larger ideological differences. The term "grassroots" is a misnomer, however, in that it implies the lack of leaders or of institutional support, whereas in reality, leaders attempting to change society must learn to network with a variety of stakeholders, from the level of individual neighbors to political leaders and large institutions. Students look critically and creatively at the ways local leaders have worked on a daily basis to promote community-based causes, in order to become more effective local activists, organizers, and civic and community leaders.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Liberal Studies, Master of Project Management, Organizational Leadership MS, or Organizational Leadership graduate certificate student

OGL	568	Women and Leadership	Investigates how gender is produced, operationalized and reified in the workplace. Course content is specific to the role of women at work and in leadership. Emphasizes understanding the reproduction of gender inequality with a focus on how commonly shared beliefs about gender and other social categories operate through interaction to differentially affect the experiences of men and women in ways that often disadvantage women. Despite majority representation across a range of public and private sectors, women continue to be visibly absent from leadership roles. Although, some purport that progress has been made to narrow the existing leadership gap for women, more men than women achieve leadership roles and assume these positions at a faster pace than their female counterparts. What contributes to this ongoing phenomenon? What are the results of the underrepresentation of women in leadership? How might organizations intervene and cultivate equity in the workplace?	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Liberal Studies, Master of Project Management, Organizational Leadership MS, or Organizational Leadership graduate certificate student

PAF	510	Foundations of Program Evaluation I: Multiple Regression	Regression serves as the foundation for modern quantitative program evaluation techniques. Regression analysis is not a single thing--it is a powerful set of tools used to examine relationships in data and test hypotheses concerning the significance of these relationships. Regression can be used to analyze observational data, in which case it can be used to identify important correlations that help us predict when events will occur together. In the program evaluation context we are specifically interested in causal analysis, which allows us to determine whether a management practice, a nonprofit or government program, or a specific public policy has a positive impact. When certain conditions are met we can use regression analysis to estimate the impact of a policy or program. This course builds a foundational understanding of the mechanics of multiple regression, the proper interpretation of regression models, and the circumstances in which we can use regression results for causal reasoning. Public health professionals are often responsible for evaluating, at multiple levels, the programs that result from such policies. Provides public health students with the analytical tools necessary to manage the implementation and evaluation of public health programs. Program evaluation serves many important functions. It supplies information to managers who are charged with implementing public health programs and to policymakers who face decisions about which programs to fund, scale back, expand, modify or eliminate. Evaluation is an accountability tool: when a public health agency decides to finance a program, they have a right to ask what their funds bought. Evaluation is also a vehicle for improving public health programs. PHI	538	Human Well-Being and Sustainability	Many of us take it for granted that human well-being is the ultimate end of sustainability or sustainable development. But what is a well-being, really? Social scientists collect empirical data and develop indices, indicators and other proxies to represent and measure well-being; but is it the kind of phenomenon that can be explained? In other words, is there a correct theory of human well-being? How does one measure well-being? Moreover, what are we to make of the relationship between well-being and sustainability? Where do these two concepts coincide? Where do they come apart? Does human well-being presuppose a commitment to sustainability? If the ultimate end of sustainability is human well-being, then is sustainability a redundant concept? This interdisciplinary course tackles such questions by critically examining the most prominent philosophical theories of well-being and by considering how they might be reconciled with relevant empirical evidence. Also spends considerable time reflecting on the problems that arise with respect to measuring well-being, particularly in the context of public policy. PSY	340	Psychology of Academic Motivation and Growth	There is a large self-help market claiming to harbor psychological secrets of success, but how do these claims and theories hold up to the science? Is it true that you just need to "believe it to achieve it"? Can you really engage in simple "brain exercises" to become a smarter person overall? This course critically reviews the behavioral science literature on psychological strategies of success, and explores the role of social cognitive influences that help form our academic self-concepts and beliefs and how they influence behaviors and performance. Contains a review of the literature examining the significance of short cognitive and psycho-educational interventions that can increase achievement motivation and improve academic performance. Finally, reflects on the role of society in applying this psychological literature toward improving educational systems and social policies. Students become familiar with the works of psychologists such as Albert Bandura, Carol Dweck, Allan Wigfield, Jacquelynnne Eccles, Claude Steele, Joshua Aronson, Geoffrey Cohen, Paul Sackett and Arthur Jensen.
