OGL	550	Leading Organizational Change	Organizations are a combination of structures, processes and relationships that bring people together to achieve a common goal. However, organizations do not operate in isolation--they are embedded in complex social, political and financial contexts. Leadership requires individuals to discern and balance competing demands and tensions inherent in organizations. Provides an overview of organizational theories to help leaders understand and be effective in these contexts. By looking at organizations through metaphorical lenses such as machines, brains and organisms, students learn how to create new options for organizational success in ever-changing operating environments. Applies theories to case studies to develop insights and innovative approaches to organizational change. A student deliverable is the creation of a plan to map out the student's capstone project in preparation for the applied project.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Organizational Leadership MS student; OGL 520; OGL 530; OGL 540

Shapes the leader within so that students are best positioned to lead in all areas of life. Summer 2024

Subject	Catalog Nbr	Course Title	Course Description	Allow Mult Enroll	Component Primary	Crse Repeatable	Grading Basis	College	Department	Units	General Studies	Requirements
OGL	556	Leadership for Wicked Environmental Problems	Environmental leadership promotes a societal change such that we move away from the perspective where economic growth is valued and takes precedence above all to one that both recognizes the limits and value of natural resources in our environment and embraces just conservation practice. The environmental challenges we are faced with today (e.g., climate change, renewable energy) are described as "wicked." Wicked problems are difficult to explain, plainly define, have no one solution, and are often the result of other indefinable problems. Environmental leadership focuses on engaging followers to jointly and creatively confront wicked challenges and promotes environmental justice addressing the relationship between social inequality and environmental quality among various stakeholders. Course critically evaluates these leadership dimensions. This examination is not limited to Western ideals found in corporate organizations but also extends to conservation practice in the developing world.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Liberal Studies, Master of Project Management, or Organizational Leadership MS student
OGL	558	Leading Organizational Innovation	Every modern organization, regardless of sector or mission, needs leaders who understand the impacts of continuing innovation on organizational success and sustainability. Examines how leadership can facilitate innovative activities within every level of an organization. Students conduct independent research for integration into a collaborative team project in the development of a graphical conceptual model that includes factors such as culture, structure and collaborative activities that enhance organizational innovation.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Project Management student or Organizational Leadership MS student
OGL	559	Modeling Systems and Stakeholders	Studies how leaders can use systems theory and stakeholder theory to assess the inputs from external stakeholders and their impacts on internal organizational systems. Using current literature, students work independently and in teams to build and apply a conceptual model of the significant relationships among organizational systems and stakeholders. Results highlight relationships among variables that can be tested using quantitative and/or qualitative research methods.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Organizational Leadership MS student
OGL	561	Collaborative Governance: NGOs and Private-Public Partnerships	Exposes students to the opportunities and challenges of the non-market, non-state realm of nongovernmental organizations and how they facilitate private-public partnerships. Assesses the realm of action, appropriateness of their missions and where they find their limitations. Requires students to think globally and consider the roles of various actors of civil society with a critical eye.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Liberal Studies, Master of Project Management, or Organizational Leadership MS student
OGL	562	Resource Development in Organizations: A Multiple Capitals Approach	Many types of resources are needed for organizations to achieve long-term sustainability. Surveys various capital resources firms need to succeed. Covers tools such as the International Integrated Reporting Council's six capitals framework (financial, manufactured, intellectual, human, social, natural) and theories that undergird these models. Through readings, case studies, and assignments, students learn about the process of value creation; the relationship between resources and an organization's business model; how the various forms of capital can be measured and reported; and what leaders can do to intentionally develop multiple forms of capital in a way that creates financial returns for the organization.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Liberal Studies, Master of Project Management, or Organizational Leadership MS student
OGL	563	Leading Social Change: Community Activism	Focuses on methods used to reform social, cultural or political norms, beginning at the local level and connecting with movements for broader social change. Grassroots movements arise on all sides of the political spectrum, and local movements can unite activists around common goals despite larger ideological differences. The term "grassroots" is a misnomer, however, in that it implies the lack of leaders or of institutional support, whereas in reality, leaders attempting to change society must learn to network with a variety of stakeholders, from the level of individual neighbors to political leaders and large institutions. Students look critically and creatively at the ways local leaders have worked on a daily basis to promote community-based causes, in order to become more effective local activists, organizers, and civic and community leaders. Emphasizes understanding the reproduction of gender inequality with a focus on how commonly shared beliefs about gender and other social categories operate through interaction to differentially affect the experiences of men and women in ways that often disadvantage women. Despite majority representation across a range of public and private sectors, women continue to be visibly absent from leadership roles. Although, some purport that progress has been made to narrow the existing leadership gap for women, more men than women achieve leadership roles and assume these positions at a faster pace than their female counterparts. PAF	510	Foundations of Program Evaluation I: Multiple Regression	Regression serves as the foundation for modern quantitative program evaluation techniques. Regression analysis is not a single thing--it is a powerful set of tools used to examine relationships in data and test hypotheses concerning the significance of these relationships. Regression can be used to analyze observational data, in which case it can be used to identify important correlations that help us predict when events will occur together. In the program evaluation context we are specifically interested in causal analysis, which allows us to determine whether a management practice, a nonprofit or government program, or a specific public policy has a positive impact. When certain conditions are met we can use regression analysis to estimate the impact of a policy or program. This course builds a foundational understanding of the mechanics of multiple regression, the proper interpretation of regression models, and the circumstances in which we can use regression results for causal reasoning. PAF	570	Microeconomics of Public Policy II	Provides the policy tools to solve economic problems such as market concentrations, market failures and externalities, and asymmetric information. Increasingly, government interventions are moving away from a command-and-control-style of direct provision of goods and services and toward a large menu of indirect approaches implemented through a complex system of third-party actors. Government intervention in private markets now entails loans and loan guarantees, grants-in-aid, contracts, vouchers, social and economic regulation, and many other policy tools. Each of these instruments involves vastly different behavioral distortions, policy technologies, political considerations and technical sophistication. PAF	601	Advanced Public Policy Seminar	This advanced seminar in public policy has a single objective: to develop a critical thinking of theoretical perspectives developed to analyze several dimensions of public policy. Focuses on theories and perspectives across specific policy areas since the objective is to get used to analytical lenses, not a specific policy area. This objective is achieved by reading required books each week. This class requires the ability to critically analyze a body of literature as a prerequisite for advancing that literature. The general format of this course includes reviews of class material and discussion. Prior to each class, students are expected to read the required books listed in the syllabus. Students are responsible for contents included in the readings, even if it is not explicitly reviewed in class. Aimed at encouraging advanced students to refine their abilities to identify, analyze, interpret, critique, evaluate, and contribute to the literature and intellectual developments of this field of scholarship, as well as to place current and emerging trends in broader context. Builds on more basic courses in public administration and is intended in part to assist students in preparation for doctoral preliminary examinations in public administration. It supplies information to managers who are charged with implementing public health programs and to policymakers who face decisions about which programs to fund, scale back, expand, modify or eliminate. Evaluation is an accountability tool: when a public health agency decides to finance a program, they have a right to ask what their funds bought. Evaluation is also a vehicle for improving public health programs. PHI	450	Philosophical and Spiritual Issues in Death and Dying	From Plato to Maimonides to Heidegger to Kubler-Ross, scholars, clinicians and spiritual writers have recognized that attitudes about death and dying contribute to understandings of human existence. Recalling the ancient Socratic, biblical and other spiritual traditions of the cura animarum (care for and cure of the soul) and joining contemporary post/secular conversations relevant to integration of body-mind-spirit, this course introduces basic concepts and practices of care ethics and spirituality. Focuses on relations among existential (ontological), therapeutic (psychosomatic), and spiritual (religious) dimensions of care. Theoretically, the course is inter-faith in approach, holistic in scope, and specialized in content. Practically, students examine real-life issues in care ethics and spirituality from multiple perspectives. PHI	538	Human Well-Being and Sustainability	Many of us take it for granted that human well-being is the ultimate end of sustainability or sustainable development. But what is a well-being, really? Social scientists collect empirical data and develop indices, indicators and other proxies to represent and measure well-being; but is it the kind of phenomenon that can be explained? In other words, is there a correct theory of human well-being? How does one measure well-being? Moreover, what are we to make of the relationship between well-being and sustainability? Where do these two concepts coincide? Where do they come apart? Does human well-being presuppose a commitment to sustainability? If the ultimate end of sustainability is human well-being, then is sustainability a redundant concept? This interdisciplinary course tackles such questions by critically examining the most prominent philosophical theories of well-being and by considering how they might be reconciled with relevant empirical evidence. Also spends considerable time reflecting on the problems that arise with respect to measuring well-being, particularly in the context of public policy. PMG	533	Stakeholder Engagement	No project exists in a vacuum--projects of all sizes and degrees of complexity are imagined, executed and ultimately evaluated by stakeholders, and stakeholders are often the key to project success or failure. Focuses on the importance of project stakeholders: the initial stage of identifying all parties involved or affected by a proposed project, analyzing their degree of involvement and impact on the project, planning how best to engage and communicate with stakeholders throughout the project lifecycle, and how to do so in an ethical way. While stakeholder theory is incorporated, the aim is for students to develop this key soft skill for interacting with and managing the interests of diverse stakeholders in real-world project situations. PSY	340	Psychology of Academic Motivation and Growth	There is a large self-help market claiming to harbor psychological secrets of success, but how do these claims and theories hold up to the science? Is it true that you just need to "believe it to achieve it"? Can you really engage in simple "brain exercises" to become a smarter person overall? This course critically reviews the behavioral science literature on psychological strategies of success, and explores the role of social cognitive influences that help form our academic self-concepts and beliefs and how they influence behaviors and performance. Contains a review of the literature examining the significance of short cognitive and psycho-educational interventions that can increase achievement motivation and improve academic performance. Finally, reflects on the role of society in applying this psychological literature toward improving educational systems and social policies. Students become familiar with the works of psychologists such as Albert Bandura, Carol Dweck, Allan Wigfield, Jacquelynne Eccles, Claude Steele, Joshua Aronson, Geoffrey Cohen, Paul Sackett and Arthur Jensen. REL	338	Daode Jing: Way to the West	At 5,000 words, the Daode Jing [Tao-te ching, "the Scripture of the Way and its Powers," attributed to the Sage Laozi] is perhaps the shortest religious book in the world. It is also the most widely misinterpreted. In China, Daoists, Buddhists and Confucians have each taken its short, pithy statements as warrant for their very different belief systems. In the West, missionaries, new-age pundits, hippies, rock-stars, mystics and LSD advocates each claim to understand the "true meaning" of Laozi's mystical words. But "the farther one travels, the less one knows..." Students read representative samples of these explanations to understand why this brief book of wisdom has endured for over 2000 years. Requires no knowledge of Chinese. Presents all Chinese texts in the translations of the instructor. ROM	442	Dracula and Vampire Lore	Vampire stories are not only local phenomena placed in Transylvania, as the common stereotype is incessantly spread. Legends about Dracula and the Count himself may be "untrue," but events that took place during the life and reign of the Wallachian Voevode Vlad Tepes, better known as Vlad the Impaler, are nonfictional. He ruled during the time of the Ottoman Empire extension to Europe and his fight against the Turks give us thought on the altered understanding of Vlad as a vampire figure. Occurring and recurring in continuously changed environments, Count Dracula affects everyone to the same degree, but still remains as secret and elusive as before, pitted against a vision of mysterious spaces that evoke the faraway castles from Whitby, UK (the origin of Stoker's Dracula), from Bran and Poenari Castles in Transylvania as well as the visions of Jules Verne's Castle of the Carpathians. RUS	241	Russian Pop Culture: Protest and Propaganda	How does Russian culture reflect recent history? How does official culture and various counter movements frame Russia's political present, the country's relationship with its neighbors and multiethnic communities at home? From mainstream entertainment to independent alternatives, Russian artists are addressing changes happening in a country rocked by authoritarianism, corruption and militarism. Under the guise of strengthening the nation's "spiritual bonds," Russian authorities are promoting nationalism, religious dogmatism and uncritical nostalgia for the Soviet past. Protesting these trends are independent artistic initiatives, proposing counter-narratives, social critiques and calls for action. Students learn about the politics of Russian culture today by engaging with texts, films, music and media projects. All course materials and instruction are in English. SBS	460	Global Cities	This close look at megacities in the global south decisively challenges the outdated impression that the rest of the world's cities still lag way behind the U.S. and Europe. The social sciences' debate over "global cities" anchors our examination of the reorganization of metropolitan social space under impact of neoliberal globalization since the 1970s. Explores urban inequalities of slums and dreamworlds; compares vernacular and transnational styles of urbanism (in architecture, design, markets, consumerism, jobs, ads, ways of living); and asks how transnational flows of people, capital and culture have reconfigured ethnic relations and national identities rooted in global cities. Students become virtual transnational flâneurs, tacking between the slums and skyscrapers of global cities, and conduct guided research on a global megacity to investigate how the production of the global city changes the lived space and urban culture of local residents, and how they respond. We ask, whose city is it? SEC	501	Solar Engineering and Commercialization I	Examines the fundamentals of the solar energy enterprise regarded from a systems engineering perspective. Examines solar energy technology, economic issues and policy matters and reviews the impact of these three areas on the design process and system operation of photovoltaic systems at the residential and commercial scales. Objectives include learning the basic principles in photovoltaic system design; thinking critically and seriously about the nature of solar energy and its use; formulating views and insights regarding energy resources, conservation, photovoltaic economics, government subsidies; and expressing and defending these views orally and in writing. Includes lectures, case studies, interactive classroom projects and guest speakers.	N	LEC	N	OPT	Ira A. SEC	502	Solar Engineering and Commercialization II	Examines the fundamentals of the solar energy enterprise at the utility scale--the components, the design process, the economic issues, and the policy matters in large-scale photovoltaic systems--in both the design of these systems (both central plant and aggregated forms) and their interface with the existing (and future) electrical grid. The course educational Objectives include: learning the principles in utility-scale photovoltaic system design; thinking critically and seriously about the interaction of photovoltaic systems with the national grid; formulating views and insights regarding energy resources, conservation, economics, government incentives, and so on, at the utility scale; and expressing and defending these views orally and in writing. Underscores the significance of policy in the successful deployment of solar energy. Complements other courses in the curriculum of the Professional Science Masters (PSM) in Solar Energy, which is largely centered on engineering concepts and techniques. Content is guided by the principle that technical considerations alone are inadequate to stimulate future expansion of solar energy. Additionally, it is stressed that policy considerations are critical to any potential transition to a solar energy economy. Typically taken in conjunction with DC summer workshop "Science Outside the Lab," but may be taken by others as stand-alone course. Course consists of lectures and discussions of policy instruments at the national, state and local scales. Visiting experts from the energy industry provide their personal experience and real-world perspective.	N	LEC	N	OPT	Ira A. N	LEC	N	OPT	College of Liberal Arts and Sciences	School of Earth and Space Exploration	3	CS	Prerequisite(s): ALEKS score of 61 or higher or Pre- or corequisite(s): MAT 170, 171, 210, 251, 265, or 270 with C or better if completed OR Visiting University Student
SES	106	Habitable Worlds	Are we alone in the Universe? If so, why? If not, where are our cosmic cousins? Such questions, once the domain of science fiction, are on the verge of being answered with science facts. Astronomers are discovering planets around other stars. Planetary scientists are exploring the worlds in our solar system. Biologists are unlocking the secrets of metabolism and evolution. Geoscientists are determining how the Earth supports life. And as we struggle to build a sustainable future for ourselves, all of us are finding out how technologically advanced civilizations rise and how they might fall. This course surveys these topics. In the process, students master basic concepts from across the major areas of science and learn what makes the Earth a habitable world.	N	LEC	N	OPT	College of Liberal Arts and Sciences	School of Earth and Space Exploration	4	SQ	
SES	107	A Solar System Journey	Introduces modern planetary science--the exploration of our solar system by astronomers, geologists, chemists, physicists, engineers, astronauts and even biologists. Studies the historical and modern science of the Sun, planets, moons, rings, asteroids and comets in our solar system, and about new planets being found in other solar systems. Covers the scientific method as well as the specific techniques used in modern planetary science and space exploration that enable us to apply what we learn about our solar system neighbors to the study of our home planet, and vice versa.	N	LEL	N	GNA	College of Liberal Arts and Sciences	School of Earth and Space Exploration	4	SG	Credit is allowed for only SES 107 or SES 194 (A Solar System Journey)
SES	121	Earth, Solar System and Universe	The Earth, solar system and universe are diverse and dynamic, featuring galaxies, solar systems, suns, planets and moons. Each type of feature is characterized by a suite of processes and features, such as volcanoes, landslides and climate. As scientists and engineers, we want to understand what is going on in our world. Understanding past events helps begin to predict future events. With the Earth, we examine past events and current natural processes to understand how this past and these processes affect humans. Accordingly, this course examines the processes, materials and features observed and inferred on the Earth, in the Solar System, and in the Universe. The course is purposely designed to be rather holistic, exploring concepts from stellar evolution, atmosphere and oceans on Earth and in extraterrestrial objects, plate tectonics, volcanoes and mountain building. Both SES 121 and SES 123 must be taken together to secure SQ General Studies credit.	N	LEC	N	OPT	College of Liberal Arts and Sciences	School of Earth and Space Exploration	3	SQ	
SES	122	History of the Earth and Solar System	The Earth and solar system have a long and interesting history, spanning nearly five billion years. Earth and other objects in the solar system have evolved over time, punctuated by a series of events, such as mountain building, volcanic eruptions, impacts and extinctions. As scientists and engineers, we want to understand what events have occurred in our world and which aspects directly affect us or are most interesting. Understanding past events helps us comprehend what has happened and begin to predict future events. With the Earth, examines past events and current natural processes to understand how this past and these processes affect humans. Accordingly, examines the history of the Earth and solar system in the context of the processes, materials and features that can be observed and inferred. SES	126	Exploration of the Universe	Introduces the basic principles of modern astronomy, with a focus on "Exploration Science," or the methods by which we explore our planet, our solar system, other stars, and even other galaxies. How do we explore? What is the "scientific method"? How is modern science carried out? Study of such questions helps form a solid foundational core for a major in the science of astrophysics--a major that spans many aspects of the universe as a whole. Don't be surprised if class includes stories about how ASU research is proceeding, or how a lesson in class is relevant to some research experience. A key goal is for you to be excited and informed about the incredible era of Earth and space exploration that we're all a part of! To name only a few examples, it is present in the ways that NGOs operate in conflict zones, in global health advocacy and awareness, in media coverage of distant catastrophes and seemingly immanent risks, and in disaster management and emergency response plans. Scholars in this field study topics such as war, diplomacy, conflict, migration, religious strife, terrorism and similar fields. SLC	358	Saving the Roman Empire	In his autobiographical epitaph, the Res Gestae, Augustus, founder of the Roman Empire, claimed to have restored Rome to her former glory. His moral, social and political reforms solidified Roman control of the world and the imperial family's hold on ruling her. Through the next five hundred years, as the power of the empire waned and waxed, Augustus's successors turned time and again to reforming the empire and restoring her to her former glory - to saving the Roman Empire. In doing so they had to deal with problems both external and internal; sometimes their ideas worked, often they did not. Ultimately they failed, and Rome and the western empire fell in CE 476. Examines the rise, decline and fall of the Roman Empire from the perspective of internal and external problems the Empire faced, and asks which reforms worked, which did not work, and why. What could have been done differently? Should anything have been done differently, or was the western Roman Empire always doomed? SLC	414	French and Italian Popular Culture	Popular culture no longer holds the ancillary role traditionally reserved for whatever does not carry the definition of high culture. SLC	439	Art in Exile: Vladímir Vladímirovich Nabokov	In English. The scandalous success of Lolita (1955) allowed Vladimir Nabokov to retire from teaching at Cornell University and move to Switzerland to devote himself to fiction, translation, criticism and lepidoptery. SLC	442	Dracula and Vampire Lore	Vampire stories are not only local phenomena placed in Transylvania, as the common stereotype is incessantly spread. Legends about Dracula and the Count himself may be "untrue," but events that took place during the life and reign of the Wallachian Voevode Vlad Tepes, better known as Vlad the Impaler, are nonfictional. He ruled during the time of the Ottoman Empire extension to Europe and his fight against the Turks give us thought on the altered understanding of Vlad as a vampire figure. Occurring and recurring in continuously changed environments, Count Dracula affects everyone to the same degree, but still remains as secret and elusive as before, pitted against a vision of mysterious spaces that evoke the faraway castles from Whitby, UK (the origin of Stoker's Dracula), from Bran and Poenari Castles in Transylvania as well as the visions of Jules Verne's Castle of the Carpathians. SOS	374	Earth's Critical Zone	The Earth's near surface environment (the "critical zone") supports most life and is the dynamic interface between the solid Earth and its fluid envelopes where much of the geologic record is produced. We now know that we face rapid climate change and the consequences of changes in land use, water resources, and ecosystems. Critical to planning a response to, or mitigation of, environmental change is understanding how the Earth surface works. Focuses on how changes to the environment manifest themselves in the critical zone-- in the form and function of the Earth's surface (landforms, water resources, soils, ecosystems). Offers a quantitative introduction to the form and function of the processes impacting the Earth's critical zone to build an understanding of the interactions of physical, chemical and biotic processes in shaping the surface and determining fluid, solute and sediment fluxes. SOS	539	Human Well-Being and Sustainability	Many of us take it for granted that human well-being is the ultimate end of sustainability or sustainable development. But what is a well-being, really? Social scientists collect empirical data and develop indices, indicators and other proxies to represent and measure well-being; but is it the kind of phenomenon that can be explained? In other words, is there a correct theory of human well-being? How does one measure well-being? Moreover, what are we to make of the relationship between well-being and sustainability? Where do these two concepts coincide? Where do they come apart? Does human well-being presuppose a commitment to sustainability? If the ultimate end of sustainability is human well-being, then is sustainability a redundant concept? This interdisciplinary course tackles such questions by critically examining the most prominent philosophical theories of well-being and by considering how they might be reconciled with relevant empirical evidence. Also spends considerable time reflecting on the problems that arise with respect to measuring well-being, particularly in the context of public policy. SOS	656	Human Rights and Sustainability	Addresses the connections between human rights and environmental sustainability. Legal and scholarly approaches linking these areas present new perspectives for addressing some of the greatest challenges of our time, given the important resource dimensions of economic and social rights and the human dimensions of sustainability. Yet human rights demands and environmental concerns are not always in harmony. Explores these tensions and opportunities by examining three substantive areas: urban ecology and human rights, the human right to food, and the human rights implications of extractive industries such as oil and mining. Following an introduction to the key concepts of human rights and sustainability, explores the substantive areas through theoretical and empirical readings on each; grassroots accounts of struggles over environment-related human rights; and selections from literature and film that illustrate the environmental justice issues at stake.
