OGL	550	Leading Organizational Change	Organizations are a combination of structures, processes and relationships that bring people together to achieve a common goal. However, organizations do not operate in isolation—they are embedded in complex social, political and financial contexts. Leadership requires individuals to discern and balance competing demands and tensions inherent in organizations. Provides an overview of organizational theories to help leaders understand and be effective in these contexts. By looking at organizations through metaphorical lenses such as machines, brains and organisms, students learn how to create new options for organizational success in ever-changing operating environments. Applies theories to case studies to develop insights and innovative approaches to organizational change. A student deliverable is the creation of a plan to map out the student's capstone project in preparation for the applied project. OGL	551	Developing Leadership Through Emotional Intelligence	Encourages greater knowledge of self through personal reflection, participation in experiential activities and numerous opportunities to make sense of discoveries. All of this occurs within the context of expanding knowledge of leadership skills and abilities. Encourages students to take every opportunity to learn about and bring insights to bear in classroom discussions. Shapes the leader within so that students are best positioned to lead in all areas of life. Over the next few weeks, explores the essential knowledge, abilities and values relevant to effective leadership. By the end of this course students have a greater understanding of their own leadership style and developmental plan for acquiring new leadership-related knowledge and abilities throughout their careers.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Liberal Studies, Master of Project Management, Organizational Leadership MS, or Organizational Leadership graduate certificate student
OGL	552	Leading Diverse Teams	Designed for students who want to increase their understanding of diversity and of interpersonal and group dynamics. Helps students to develop more effective working relationships and to improve their ability to lead, influence, cooperate and work effectively with others in today's diverse team-oriented organizations. At the center of this experiential-based course is an intensive group learning experience. Emphasizes learning about oneself in the context of others based on the here-and-now experience of the group.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Engineering DEng, Master of Liberal Studies, Master of Project Management, Organizational Leadership MS, or Organizational Leadership graduate certificate student
OGL	553	Intercultural Leadership	In today's increasingly global and interconnected world it is important for leaders to understand the role that culture plays in one's leadership and communication style. Students obtain the knowledge and skills necessary to lead in culturally diverse environments. Through readings, discussions, video and interactive simulations, students gain a concrete understanding of a variety of leadership and communication styles that are found throughout the world. Students also increase their intercultural competencies and global awareness.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Liberal Studies, Master of Project Management, Organizational Leadership MS, or Organizational Leadership graduate certificate student
OGL	554	Learning and Development in Organizations	Focuses on adult learning interventions and professional development within the context of a learning organizational setting. Integrates motivation and adult learning, current neuroscience, Bohm dialogue and instructional design. Develops the knowledge and skills needed to plan, design, develop, implement and evaluate adult learning interventions (materials, courses, curricula, programs) within different forms of organizations.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Liberal Studies, Master of Project Management, Organizational Leadership MS, or Organizational Leadership graduate certificate student
OGL	555	Leading Beyond Conflict	Today's leaders are increasingly confronted with conflicts that escalate into issues that could result in costly litigation. Comprises a review and analysis of contemporary methods of alternative dispute resolution, including arbitration, negotiation and mediation, with a strong focus on mediation. Students learn about the alternatives to costly litigation and develop working strategies to take advantage of these alternatives.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Engineering DEng, Master of Liberal Studies, Master of Project Management, Organizational Leadership MS, or Organizational Leadership graduate certificate student
OGL	556	Leadership for Wicked Environmental Problems	Environmental leadership promotes a societal change such that we move away from the perspective where economic growth is valued and takes precedence above all to one that both recognizes the limits and value of natural resources in our environment and embraces just conservation practice. The environmental challenges we are faced with today (e.g., climate change, renewable energy) are described as "wicked." Wicked problems are difficult to explain, plainly define, have no one solution, and are often the result of other indefinable problems. Environmental leadership focuses on engaging followers to jointly and creatively confront wicked challenges and promotes environmental justice addressing the relationship between social inequality and environmental quality among various stakeholders. Course critically evaluates these leadership dimensions. This examination is not limited to Western ideals found in corporate organizations but also extends to conservation practice in the developing world. OGL	558	Leading Organizational Innovation	Every modern organization, regardless of sector or mission, needs leaders who understand the impacts of continuing innovation on organizational success and sustainability. Examines how leadership can facilitate innovative activities within every level of an organization. Students conduct independent research for integration into a collaborative team project in the development of a graphical conceptual model that includes factors such as culture, structure and collaborative activities that enhance organizational innovation.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Liberal Studies, Master of Project Management, Organizational Leadership MS, or Organizational Leadership graduate certificate student
OGL	559	Modeling Systems and Stakeholders	Studies how leaders can use systems theory and stakeholder theory to assess the inputs from external stakeholders and their impacts on internal organizational systems. Using current literature, students work independently and in teams to build and apply a conceptual model of the significant relationships among organizational systems and stakeholders. Results highlight relationships among variables that can be tested using quantitative and/or qualitative research methods.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Organizational Leadership MS student
OGL	561	Collaborative Governance: NGOs and Private-Public Partnerships	Exposes students to the opportunities and challenges of the non-market, non-state realm of nongovernmental organizations and how they facilitate private-public partnerships. Assesses the realm of action, appropriateness of their missions and where they find their limitations. Requires students to think globally and consider the roles of various actors of civil society with a critical eye. OGL	562	Resource Development in Organizations: A Multiple Capitals Approach	Many types of resources are needed for organizations to achieve long-term sustainability. Surveys various capital resources firms need to succeed. Covers tools such as the International Integrated Reporting Council's six capitals framework (financial, manufactured, intellectual, human, social, natural) and theories that undergird these models. Through readings, case studies, and assignments, students learn about the process of value creation; the relationship between resources and an organization's business model; how the various forms of capital can be measured and reported; and what leaders can do to intentionally develop multiple forms of capital in a way that creates financial returns for the organization.	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Liberal Studies, Master of Project Management, Organizational Leadership MS, or Organizational Leadership graduate certificate student
OGL	563	Leading Social Change: Community Activism	Focuses on methods used to reform social, cultural or political norms, beginning at the local level and connecting with movements for broader social change. Grassroots movements arise on all sides of the political spectrum, and local movements can unite activists around common goals despite larger ideological differences. The term "grassroots" is a misnomer, however, in that it implies the lack of leaders or of institutional support, whereas in reality, leaders attempting to change society must learn to network with a variety of stakeholders, from the level of individual neighbors to political leaders and large institutions. Students look critically and creatively at the ways local leaders have worked on a daily basis to promote community-based causes, in order to become more effective local activists, organizers, and civic and community leaders. OGL	568	Women and Leadership	Investigates how gender is produced, operationalized and reified in the workplace. Course content is specific to the role of women at work and in leadership. Emphasizes understanding the reproduction of gender inequality with a focus on how commonly shared beliefs about gender and other social categories operate through interaction to differentially affect the experiences of men and women in ways that often disadvantage women. Despite majority representation across a range of public and private sectors, women continue to be visibly absent from leadership roles. Although, some purport that progress has been made to narrow the existing leadership gap for women, more men than women achieve leadership roles and assume these positions at a faster pace than their female counterparts. What contributes to this ongoing phenomenon? What are the results of the underrepresentation of women in leadership? How might organizations intervene and cultivate equity in the workplace?	N	LEC	N	GNA	College of Integrative Sciences and Arts	School of Applied Professional Studies	3		Prerequisite(s): Master of Liberal Studies, Master of Project Management, Organizational Leadership MS, or Organizational Leadership graduate certificate student

PAF	510	Foundations of Program Evaluation I: Multiple Regression	Regression serves as the foundation for modern quantitative program evaluation techniques. Regression analysis is not a single thing--it is a powerful set of tools used to examine relationships in data and test hypotheses concerning the significance of these relationships. Regression can be used to analyze observational data, in which case it can be used to identify important correlations that help us predict when events will occur together. In the program evaluation context we are specifically interested in causal analysis, which allows us to determine whether a management practice, a nonprofit or government program, or a specific public policy has a positive impact. When certain conditions are met we can use regression analysis to estimate the impact of a policy or program. This course builds a foundational understanding of the mechanics of multiple regression, the proper interpretation of regression models, and the circumstances in which we can use regression results for causal reasoning.	N	LEC	N	GNA	Watts College of Public Service and Community Solutions	School of Public Affairs	3		Prerequisite(s): degree- or nondegree-seeking graduate student
PAF	511	Foundations of Program Evaluation II: Research Design	Covers important concepts in research design and common quasi-experimental tools for causal analysis.	N	LEC	N	GNA	Watts College of Public Service and Community Solutions	School of Public Affairs	3		Prerequisite(s): PAF 510 (CPP 523)
PAF	512	Foundations of Program Evaluation III: Advanced Regression Tools	Extends previous course by translating each specific form of the counterfactual--pre-post with comparisons, reflexive design, and the post-test only design--into specific regression models that leverage each counterfactual. Helps expand program evaluation toolkit by demonstrating how to estimate several common regression models that leverage unique data and counterfactual specifications and teaches how to estimate program effects using a given research design.	N	LEC	N	GNA	Watts College of Public Service and Community Solutions	School of Public Affairs	3		Prerequisite(s): PAF 511 (CPP 524)
PAF	513	Foundations of Data Science I: Introduction to Data Programming in R	Data is an essential ingredient of any program evaluation or performance management system. Organizations that want to embrace an evidence-based approach to management need to develop processes for gathering data; linking multiple datasets; running analysis; and sharing results with stakeholders through reports, dashboards or Web applications. The ability to collect, organize and analyze data is a desirable skill set for professional knowledge workers, high-level management and evaluators. Introduces the R data programming language, an open source platform that has become an industry standard because of its flexibility and power. PAF	568	Disasters as Opportunity for Sustainability	Explores how disasters can give rise to sustainability transitions and sustainability solutions. Disasters are revealing crisis. As hazards roll into disasters they lay bare the underlying conditions of socio-ecological vulnerability and inequities that affect almost all aspects of daily life. They also affect the infrastructures and institutions supporting daily life. This realization stimulates improvisation and ideas for just, green, inclusive and resilient futures. Investigates case studies to reconstruct how people, affected by and surviving a disaster, advanced sustainability transitions and reduced disaster risk. Uses an interdisciplinary perspective to analyze these transitions, drawing on theories of change from sustainability transitions and transformation as well as disaster management research. Moreover, students ground the literature in concrete experiences as shared through guest speakers, professional experiences, documentaries and an applied project. PBH	455	Public Health Program Evaluation	Federal, state and local policies shape the nature of the public health programs implemented in communities. Public health professionals are often responsible for evaluating, at multiple levels, the programs that result from such policies. Provides public health students with the analytical tools necessary to manage the implementation and evaluation of public health programs. Program evaluation serves many important functions. It supplies information to managers who are charged with implementing public health programs and to policymakers who face decisions about which programs to fund, scale back, expand, modify or eliminate. Evaluation is an accountability tool: when a public health agency decides to finance a program, they have a right to ask what their funds bought. Evaluation is also a vehicle for improving public health programs. By identifying what works and what does not--and how new programs fare relative to existing practice--policymakers and managers can improve program designs. PHI	450	Philosophical and Spiritual Issues in Death and Dying	From Plato to Maimonides to Heidegger to Kubler-Ross, scholars, clinicians and spiritual writers have recognized that attitudes about death and dying contribute to understandings of human existence. Recalling the ancient Socratic, biblical and other spiritual traditions of the cura animarum (care for and cure of the soul) and joining contemporary post/secular conversations relevant to integration of body-mind-spirit, this course introduces basic concepts and practices of care ethics and spirituality. Focuses on relations among existential (ontological), therapeutic (psychosomatic) and spiritual (religious) dimensions of care. Theoretically, the course is inter-faith in approach, holistic in scope and specialized in content. Practically, students examine real-life issues in care ethics and spirituality from multiple perspectives. PHI	538	Human Well-Being and Sustainability	Many of us take it for granted that human well-being is the ultimate end of sustainability or sustainable development. But what is a well-being, really? Social scientists collect empirical data and develop indices, indicators and other proxies to represent and measure well-being; but is it the kind of phenomenon that can be explained? In other words, is there a correct theory of human well-being? How does one measure well-being? Moreover, what are we to make of the relationship between well-being and sustainability? Where do these two concepts coincide? Where do they come apart? Does human well-being presuppose a commitment to sustainability? If the ultimate end of sustainability is human well-being, then is sustainability a redundant concept? This interdisciplinary course tackles such questions by critically examining the most prominent philosophical theories of well-being and by considering how they might be reconciled with relevant empirical evidence. Also spends considerable time reflecting on the problems that arise with respect to measuring well-being, particularly in the context of public policy. PSY	340	Psychology of Academic Motivation and Growth	There is a large self-help market claiming to harbor psychological secrets of success, but how do these claims and theories hold up to the science? Is it true that you just need to "believe it to achieve it"? Can you really engage in simple "brain exercises" to become a smarter person overall? This course critically reviews the behavioral science literature on psychological strategies of success, and explores the role of social cognitive influences that help form our academic self-concepts and beliefs and how they influence behaviors and performance. Contains a review of the literature examining the significance of short cognitive and psycho-educational interventions that can increase achievement motivation and improve academic performance. Finally, reflects on the role of society in applying this psychological literature toward improving educational systems and social policies. Students become familiar with the works of psychologists such as Albert Bandura, Carol Dweck, Allan Wigfield, Jacquelynne Eccles, Claude Steele, Joshua Aronson, Geoffrey Cohen, Paul Sackett and Arthur Jensen. Students critically appraise and challenge the controversial works of noted psychologists who suggest intelligence is an innate, fixed trait, or that intelligence differs in individuals as a function of belonging to a certain group or class of people. REL	338	Daode Jing: Way to the West	At 5,000 words, the Daode Jing [Tao-te ching, "the Scripture of the Way and its Powers," attributed to the Sage Laozi] is perhaps the shortest religious book in the world. It is also the most widely misinterpreted. In China, Daoists, Buddhists and Confucians have each taken its short, pithy statements as warrant for their very different belief systems. In the West, missionaries, new-age pundits, hippies, rock-stars, mystics and LSD advocates each claim to understand the "true meaning" of Laozi's mystical words. But "the farther one travels, the less one knows..." Students read representative samples of these explanations to understand why this brief book of wisdom has endured for over 2000 years. Requires no knowledge of Chinese. Presents all Chinese texts in the translations of the instructor. ROM	442	Dracula and Vampire Lore	Vampire stories are not only local phenomena placed in Transylvania, as the common stereotype is incessantly spread. Legends about Dracula and the Count himself may be "untrue," but events that took place during the life and reign of the Wallachian Voevode Vlad Tepes, better known as Vlad the Impaler, are nonfictional. He ruled during the time of the Ottoman Empire extension to Europe and his fight against the Turks give us thought on the altered understanding of Vlad as a vampire figure. Occurring and recurring in continuously changed environments, Count Dracula affects everyone to the same degree, but still remains as secret and elusive as before, pitted against a vision of mysterious spaces that evoke the faraway castles from Whitby, UK (the origin of Stoker's Dracula), from Bran and Poenari Castles in Transylvania as well as the visions of Jules Verne's Castle of the Carpathians. RUS	241	Russian Pop Culture: Protest and Propaganda	How does Russian culture reflect recent history? How does official culture and various counter movements frame Russia's political present, the country's relationship with its neighbors and multiethnic communities at home? From mainstream entertainment to independent alternatives, Russian artists are addressing changes happening in a country rocked by authoritarianism, corruption and militarism. Under the guise of strengthening the nation's "spiritual bonds," Russian authorities are promoting nationalism, religious dogmatism and uncritical nostalgia for the Soviet past. Protesting these trends are independent artistic initiatives, proposing counter-narratives, social critiques and calls for action. Students learn about the politics of Russian culture today by engaging with texts, films, music and media projects. All course materials and instruction are in English. RUS	439	Art in Exile: Vladimir Vladimirovich Nabokov	In English. The scandalous success of Lolita (1955) allowed Vladimir Nabokov to retire from teaching at Cornell University and move to Switzerland to devote himself to fiction, translation, criticism and lepidoptery. This was only one of the many metamorphoses that Nabokov, a Russian noble, underwent while in exile, moving from Russia to the Crimea, Cambridge UK, Berlin, Paris, Cambridge MA, Ithaca, Hollywood and finally Montreux. Examines the Russian roots of Nabokov's Russian (in translation) and American novels about exile: his first novel, Mary (1926), The Defense (1929), Glory (1932), and his tribute to 19th-century Russian literature, The Gift (1938), which he considered his greatest Russian novel. These are followed by Lolita (1955), Pnin (1957) and Pale Fire (1962), his memoirs, Speak, Memory (1966), and some essays and short stories. Films include Lolita by Stanley Kubrick (1962) and Adrian Lyne (1997). Explores urban inequalities of slums and dreamworlds; compares vernacular and transnational styles of urbanism (in architecture, design, markets, consumerism, jobs, ads, ways of living); and asks how transnational flows of people, capital and culture have reconfigured ethnic relations and national identities rooted in global cities. Students become virtual transnational flâneurs, tacking between the slums and skyscrapers of global cities, and conduct guided research on a global megacity to investigate how the production of the global city changes the lived space and urban culture of local residents, and how they respond. Explores the science and technology used to study the oceans, discusses current topics in ocean science and investigates the effect of human activities on this system. Challenges students to examine their own mindsets regarding the importance of ocean impacts, discuss sustainable solutions to these global problems and identify the range of careers associated with the marine field.	N	LEC	N	Z1	College of Global Futures	School of Ocean Futures	3	SUST	Credit is allowed for only BIO 194 (Ocean Futures (Coastal and Marine Science)) or SEA 101 or SEA 194 (Ocean Futures (Coastal and Marine Science))

SEA	201	Ocean Conservation	Over 70% of our planet is covered in oceans, more than 80% of the world's population lives within 50 miles of the coast, and fish products are a primary source of animal protein for approximately 40% of the world. We rely extensively on oceans, but this relationship is not always a healthy one. Our reliance often leads to conflicts between people and ocean resources including overfishing, loss of ocean biodiversity, marine pollution and coastal and marine habitat degradation. Focuses on the health and well-being of the world's oceans and the people who depend on them. Examines not simply the oceans' ecosystems, but the social, economic, political, cultural and institutional forces that shape our interactions with them. Evaluates how and why people interact with oceans and marine resources today, with an eye to understanding how it shapes the oceans of tomorrow.	N	LEC	N	GNA	College of Global Futures	School of Ocean Futures	3	SUST	
SEA	202	Ocean Communities: Introduction to Ethnobotany	The ocean makes up 71% of earth's surface. People have used the ocean and resources within the ocean, plants and animals, to survive and curate new lands. Students study relationships between people and plants with immersion in the global cultural relationships that plants and animals have on humanity's history, present and future. Through an ethnobotanical lens, students explore from the mountains to the oceans how various human communities engage, exchange and build relationships with regional resources. Uses Hawaii as a starting example for topics to expand on plant domestication and agriculture; plant biogeography and human migration; plant use in religious, traditional medicines and indigenous traditions; cultural aspects of plant conservation. From an Islander's perspective, the ocean connects us. The ocean contributes to trans-regional relationships between land-based communities. Encourages students to identify how their relationships to plants, animals and the ocean influence their evolving outlook on society. SES	100	Introduction to Exploration	Science and engineering of Earth, solar system, and space exploration. Experimental design, engineering design; teaming; the professions of science and engineering.	N	LEC	N	OPT	College of Liberal Arts and Sciences	School of Earth and Space Exploration	3	QTRS OR CS	Prerequisite(s): ALEKS score of 61 or higher or Pre- or corequisite(s): MAT 170, 171, 210, 251, 265, or 270 with C or better if completed OR Visiting University Student
SES	106	Habitable Worlds	Are we alone in the Universe? If so, why? If not, where are our cosmic cousins? Such questions, once the domain of science fiction, are on the verge of being answered with science facts. Astronomers are discovering planets around other stars. Planetary scientists are exploring the worlds in our solar system. Biologists are unlocking the secrets of metabolism and evolution. Geoscientists are determining how the Earth supports life. And as we struggle to build a sustainable future for ourselves, all of us are finding out how technologically advanced civilizations rise and how they might fall. This course surveys these topics. In the process, students master basic concepts from across the major areas of science and learn what makes the Earth a habitable world.	N	LEC	N	OPT	College of Liberal Arts and Sciences	School of Earth and Space Exploration	4	SCIT OR SQ	
SES	107	A Solar System Journey	Introduces modern planetary science--the exploration of our solar system by astronomers, geologists, chemists, physicists, engineers, astronauts and even biologists. Studies the historical and modern science of the Sun, planets, moons, rings, asteroids and comets in our solar system, and about new planets being found in other solar systems. Covers the scientific method as well as the specific techniques used in modern planetary science and space exploration that enable us to apply what we learn about our solar system neighbors to the study of our home planet, and vice versa.	N	LEL	N	GNA	College of Liberal Arts and Sciences	School of Earth and Space Exploration	4	SCIT OR SG	Credit is allowed for only SES 107 or SES 194 (A Solar System Journey)
SES	121	Earth, Solar System and Universe	The Earth, solar system and universe are diverse and dynamic, featuring galaxies, solar systems, suns, planets and moons. Each type of feature is characterized by a suite of processes and features, such as volcanoes, landslides and climate. As scientists and engineers, we want to understand what is going on in our world. Understanding past events helps begin to predict future events. With the Earth, we examine past events and current natural processes to understand how this past and these processes affect humans. Accordingly, this course examines the processes, materials and features observed and inferred on the Earth, in the Solar System, and in the Universe. The course is purposely designed to be rather holistic, exploring concepts from stellar evolution, atmosphere and oceans on Earth and in extraterrestrial objects, plate tectonics, volcanoes and mountain building. Both SES 121 and SES 123 must be taken to secure General Studies Gold SCIT credit or General Studies Maroon SQ credit.	N	LEC	N	OPT	College of Liberal Arts and Sciences	School of Earth and Space Exploration	3	SCIT OR SQ	
SES	122	History of the Earth and Solar System	The Earth and solar system have a long and interesting history, spanning nearly five billion years. Earth and other objects in the solar system have evolved over time, punctuated by a series of events, such as mountain building, volcanic eruptions, impacts and extinctions. As scientists and engineers, we want to understand what events have occurred in our world and which aspects directly affect us or are most interesting. Understanding past events helps us comprehend what has happened and begin to predict future events. With the Earth, examines past events and current natural processes to understand how this past and these processes affect humans. Accordingly, examines the history of the Earth and solar system in the context of the processes, materials and features that can be observed and inferred. Explores the history of the Earth and solar system from a broad, interdisciplinary, perspective. SES	126	Exploration of the Universe	Introduces the basic principles of modern astronomy, with a focus on "Exploration Science," or the methods by which we explore our planet, our solar system, other stars, and even other galaxies. How do we explore? What is the "scientific method"? How is modern science carried out? Study of such questions helps form a solid foundational core for a major in the science of astrophysics--a major that spans many aspects of the universe as a whole. Don't be surprised if class includes stories about how ASU research is proceeding, or how a lesson in class is relevant to some research experience. A key goal is for you to be excited and informed about the incredible era of Earth and space exploration that we're all a part of! SLC	358	Saving the Roman Empire	In his autobiographical epitaph, the Res Gestae, Augustus, founder of the Roman Empire, claimed to have restored Rome to her former glory. His moral, social and political reforms solidified Roman control of the world and the imperial family's hold on ruling her. Through the next five hundred years, as the power of the empire waned and waxed, Augustus's successors turned time and again to reforming the empire and restoring her to her former glory - to saving the Roman Empire. In doing so they had to deal with problems both external and internal; sometimes their ideas worked, often they did not. Ultimately they failed, and Rome and the western empire fell in CE 476. Examines the rise, decline and fall of the Roman Empire from the perspective of internal and external problems the Empire faced, and asks which reforms worked, which did not work, and why. What could have been done differently? Should anything have been done differently, or was the western Roman Empire always doomed? SLC	439	Art in Exile: Vladimir Vladimirovich Nabokov	In English. The scandalous success of Lolita (1955) allowed Vladimir Nabokov to retire from teaching at Cornell University and move to Switzerland to devote himself to fiction, translation, criticism and lepidoptery. This was only one of the many metamorphoses that Nabokov, a Russian noble, underwent while in exile, moving from Russia to the Crimea, Cambridge UK, Berlin, Paris, Cambridge MA, Ithaca, Hollywood and finally Montreux. Examines the Russian roots of Nabokov's Russian (in translation) and American novels about exile: his first novel, Mary (1926), The Defense (1929), Glory (1932), and his tribute to 19th-century Russian literature, The Gift (1938), which he considered his greatest Russian novel. These are followed by Lolita (1955), Pnin (1957) and Pale Fire (1962), his memoirs, Speak, Memory (1966), and some essays and short stories. Films include Lolita by Stanley Kubrick (1962) and Adrian Lyne (1997). SLC	442	Dracula and Vampire Lore	Vampire stories are not only local phenomena placed in Transylvania, as the common stereotype is incessantly spread. Legends about Dracula and the Count himself may be "untrue," but events that took place during the life and reign of the Wallachian Voevode Vlad Tepes, better known as Vlad the Impaler, are nonfictional. He ruled during the time of the Ottoman Empire extension to Europe and his fight against the Turks give us thought on the altered understanding of Vlad as a vampire figure. Occurring and recurring in continuously changed environments, Count Dracula affects everyone to the same degree, but still remains as secret and elusive as before, pitted against a vision of mysterious spaces that evoke the faraway castles from Whitby, UK (the origin of Stoker's Dracula), from Bran and Poenari Castles in Transylvania as well as the visions of Jules Verne's Castle of the Carpathians. SOS	363	From Cells to Society: Understanding Complexity	Equips students with concepts and empirical examples they need to understand the role of complexity in the world around them. Complexity science is based on the fundamental principle that entities and phenomena in the world around us are systems composed of many parts that interact to produce their global characteristics. For example, cells interact to produce organs and tissues, which in turn interact to produce physiological processes (i.e., the capacity to metabolize food to produce new compounds and energy) and physical infrastructure (skeletal and muscular structure) which produce organisms. Organisms, (e.g., humans) interact to form groups, villages, cities, nations. We now know that we face rapid climate change and the consequences of changes in land use, water resources, and ecosystems. Critical to planning a response to, or mitigation of, environmental change is understanding how the Earth surface works. Focuses on how changes to the environment manifest themselves in the critical zone-- in the form and function of the Earth's surface (landforms, water resources, soils, ecosystems). Offers a quantitative introduction to the form and function of the processes impacting the Earth's critical zone to build an understanding of the interactions of physical, chemical and biotic processes in shaping the surface and determining fluid, solute and sediment fluxes. SOS	483	Should I Eat Fish? Economics, Ecology and Policy of Sustainable Seafood	Begins with a seemingly simple question about a personal choice, "should I eat fish?" and uses it as the launching pad for an in-depth exploration of seafood as a food system. Participants become more informed seafood consumers, but the main goal is familiarizing students with the structures and processes in the global seafood system in both Global North and Global South contexts, and teaching students how to evaluate tradeoffs in a rigorous way. Tradeoffs are inherent to all conservation and sustainability questions: whether in personal contexts, like the choice of which food to eat, or in public contexts, like evaluating the potential consequences of changes in policies for the management of natural resources. Students emerge from this course with a sense of how their personal role as seafood consumers interacts with the broader seafood food system. SOS	537	Disasters as Opportunity for Sustainability	Explores how disasters can give rise to sustainability transitions and sustainability solutions. Disasters are revealing crisis. As hazards roll into disasters they lay bare the underlying conditions of socio-ecological vulnerability and inequities that affect almost all aspects of daily life. They also affect the infrastructures and institutions supporting daily life. This realization stimulates improvisation and ideas for just, green, inclusive and resilient futures. Investigates case studies to reconstruct how people, affected by and surviving a disaster, advanced sustainability transitions and reduced disaster risk. Uses an interdisciplinary perspective to analyze these transitions, drawing on theories of change from sustainability transitions and transformation as well as disaster management research. Moreover, students ground the literature in concrete experiences as shared through guest speakers, professional experiences, documentaries and an applied project.	N	LEC	N	GNA	College of Global Futures	School of Sustainability	3		Prerequisite(s): degree- or nondegree-seeking graduate student; Credit is allowed for only PAF 568 (CPP 537) or SOS 494 (Disasters as Opportunities for Change Towards Sust) or SOS 537 or SOS 598 (Disasters as Opportunities for Change Towards Sust)
SOS	539	Human Well-Being and Sustainability	Many of us take it for granted that human well-being is the ultimate end of sustainability or sustainable development. But what is a well-being, really? Social scientists collect empirical data and develop indices, indicators and other proxies to represent and measure well-being; but is it the kind of phenomenon that can be explained? In other words, is there a correct theory of human well-being? How does one measure well-being? Moreover, what are we to make of the relationship between well-being and sustainability? Where do these two concepts coincide? Where do they come apart? Does human well-being presuppose a commitment to sustainability? If the ultimate end of sustainability is human well-being, then is sustainability a redundant concept? This interdisciplinary course tackles such questions by critically examining the most prominent philosophical theories of well-being and by considering how they might be reconciled with relevant empirical evidence. Also spends considerable time reflecting on the problems that arise with respect to measuring well-being, particularly in the context of public policy.	N	LEC	N	OPT	College of Global Futures	School of Sustainability	3		Prerequisite(s): degree- or nondegree-seeking graduate student; Credit is allowed for only HPS/PHI/SOS 591 (Human Well-Being and Sustainability) or PHI 538 or SOS 494 (Human Well-Being and Sustainability) or SOS 539

TEM	525	Fundamentals of Entrepreneurial Leadership	"Experiential" course for students to practice "being" a leader at the personal, interpersonal and community levels. While typical leadership classes leave one knowing about leaders and leadership, this class leaves students being leaders as part of their natural self-expression. The program follows an ontological pedagogy, rather than epistemological one. Ontology is the study of the nature and function of being "as lived" in real time. Epistemology by contrast deals with the varieties, grounds, and validity of knowledge. Leadership skills include mastery of communication at each of the three levels, from personal relationships to large-scale messaging for media and branding; and looking beyond the personal and interpersonal sociological level of analysis to incorporate principles of social and environmental justice into their relationships and the enterprises they lead. TEM	630	Scaling Entrepreneurial Leadership	The personal skills required to succeed in a small start-up environment are different from those required to run a successful enterprise or nonprofit. Many entrepreneurs do not have access to the learning that prepares them to both launch and successfully scale their venture. Students master the skills to lead an enterprise through the challenges of the 21st century.	N	LEC	N	GNA	Ira A. Fulton Schools of Engineering	Technology Entrepreneurship and Management	3		Prerequisite(s): Innovation and Venture Development MS student; Corequisite(s): IVD 562; Credit is allowed for only IVD 630 or TEM 630
TEM	660	Innovation Studio IV: Business Model	Faced with the challenge of business model generation and prototyping, students need to define the starting points of value proposition, supply chain and customer segments. Later in the process, a clear description of the revenue model, customer relationship, key resources, key activities, key partners and cost structure complement the original value proposition design. The refinement of the newly created business model is made through a process of iteration. Students have an overall comprehension of the strategic innovation process made of (a) strategy, (b) execution, (c) tools and (d) metrics before moving to the stages of scaling and growth of the business. In order to develop a viable business model, students need to understand the costs of development, manufacturing and getting their goods or services to customers.	N	STO	N	GNA	Ira A. TGM	204	Principles of Marketing for Global Organizations	Explores the ways in which global marketing strategies reflect a deep understanding of markets and create valuable offerings for customers globally. Broadly speaking, marketing strategy making is comprised of segmentation, targeting and positioning. Segmentation is the process by which we segregate a relatively heterogeneous mass market into relatively homogeneous market segments. Targeting is the process by which we analyze opportunities and identify those customers where our business has the greatest prospects for success. Positioning is the process of assembling the "total offering" (product, service, distribution and price) and communicating the benefits of this "total offering" to the members of our target market. Challenges students to think critically about global competition. As such, rote learning of terms and concepts is not sufficient to prepare students to manage a business in global markets. Students integrate their knowledge of these topics through the creation of an international marketing plan based on a product or service and in a country approved by the instructor.	N	LEC	N	GNA	Thunderbird School of Global Management	Thunderbird School of Global Management	2-3		Prerequisite(s): TGM 557
TGM	553	Global Customer Decision Making	Both theoretical and applied, the backbone and foundation of the course draws heavily from behavioral economics, consumer psychology and consumer information processing. Equips students with a comprehensive understanding of how and why consumers make decisions the way they do in the market (B2C). Although consumers desire to make rational decisions that maximize their utility, in reality, more often than not, they tend to make irrational and suboptimal choices. Offers why such phenomena occur and how consumers can improve their quality of decision making. Offers a richer appreciation of the heuristics and decision-making rules that consumers use and biases that affect consumer decision making.	N	LEC	N	GNA	Thunderbird School of Global Management	Thunderbird School of Global Management	3		Prerequisite(s): TGM 557
TGM	554	Global Marketing Research	Focuses on the marketing research process from start to finish. Marketing research techniques provide competitive advantage in a global business context. GP provides in-depth knowledge of the field of global pricing, covering the psychology, economics and tactics of pricing for a business enterprise, product or service. Better pricing knowledge usually converts to better bottom-line results. Students learn pricing theory and tactics as well as develop hands-on pricing skills, all aimed at improving profitability. These skills can be applied across the full range of professional contexts--as entrepreneurs, brand managers, business unit managers, management and M&A consultants. TGM	556	Global Strategic Services Marketing	Services have come to dominate our economy. Yet there remains a naïve belief that services marketing and management is a simple adaptation of goods marketing and management. Unlike physical goods, services are co-produced with customers at a time, and in a place, of the customer's choosing. This co-production directly involves an organization's front-line employees. As a result, it is more difficult for services to be inventoried and checked for quality assurance. Provides a thorough understanding of the management and continuous improvement of service operations, including a thorough understanding of the role of customers in service operations such that service firms can design effective service experience so as to minimize service failure. Provides students with an end-to-end hands-on customer experience management (e.g., customer satisfaction and loyalty), project that involves survey design, customer experience model development, data collection, data analysis, and recommendations. TGM	730	Systems Change and Transformation in the Anthropocene	Transnational hyper-connectivity is an essential feature of our time. Yet in government, business and civil society, our approaches to power, leadership and organization remain locked in the competition-based frameworks of the 20th century. To understand these all too common problems, we need to move beyond linear models--based on a fairly detailed knowledge of the present situation and supposed to be able to make reasonable forecasts of the future--which underlie much formal policy analysis and design. Understanding the implications of strategic behavior, nonlinear feedbacks and heterogeneous actors on policies is needed. Equally we need to understand the impact of policies at multiple scales and across a wide range of stakeholders. Assesses these topics through systems change and how this has led to transformation in the Anthropocene. The foundational premise of this course is that the traditional discipline for achieving objectives in global affairs--statecraft--is necessary but not sufficient for the networked age. New tools and strategies are needed to understand and influence a world based on connectivity. Network theory provides a starting point. Covers basic principles of network theory and helps understand their relevance to the design, development and management of fit-for-purpose networks involving business, civic organizations and nonprofits, and government. Examines case studies of different global problems--from health to human rights, war to economic renewal, the environment to terrorism. Much progress has been made in the scientific understanding of the kinds of systems--under the name of complexity. Explores the consequence of these new insights for policy. Discusses salient policy and management implications of a complex adaptive system frame. TGM	740	Leading and Managing Global Organizations: Advanced Topics	Organizations, private (business) and public (government, nonprofit and hybrid), all face chronic management and leadership problems that pose significant challenges to them. Organizations are complex and problematic entities, which is especially true for government organizations. These problems include the difficulty of designing organizations capable of coping with highly dynamic and rapidly changing environments, the challenge of developing strategies and structures for hypercompetitive conditions, and the greater complexity of managing global enterprises. Further issues addressed are the difficult task of shaping a corporate culture, managing politics and conflict between individuals and organizational units, and motivating employees who are more mobile than ever. Students learn to design incentive systems, as well as effectively lead teams. Covers how leaders of these organizations deal with these challenges. Helps students gain a deeper understanding of the nature of organizational change and the complexities that underlie them (through conceptual frameworks, organizational structure and design, the interaction of organizations with their environments and the behavior of individuals and groups within organizations; readings; and; discussions). WST	469	Trash Talk	Examines the possibilities inherent in "theorizing from the gutter"; looking at the world not from a lofty "Ivory Tower" but from the slime, the muck, the dumpster, the trash heap, the wasteland, the discarded and the downtrodden. Takes its theoretical framework from a radical 1960s manifesto called SCUM Manifesto by Valerie Solanas and from the French feminist philosophies of Julia Kristeva, who theorized the abject as a relationship with the grotesque that reveals the deep-seated fear of death. Uses these theoretical positions to examine trash, both abstractly and literally. Works through a variety of concepts ranging from actual trash, garbage, waste, toxic sludge, pollution and dirt, and tackles more abstract notions of trash such as the knowledge produced on the fringe in circuses, amusement parks, "trailer trash" zones, freak shows and the bodies of those marked as "Other" or different. Among the questions we'll need to have constantly in our minds are: In what ways has feminist theorizing changed over time? Does transnational feminist theory challenge or even undermine previous feminist theoretical discussions or the perspectives you might be familiar with from your undergraduate days? What kinds of engagements do our authors have with theorists in other areas (queer studies, postcolonial studies, critical race theory)? WWS	460	World War II	Explores the causes, conduct and consequences of World War II. When did World War II start? How was it fought, and what did that mean for soldiers, the homefront and millions of civilians in Japanese or German occupied regions? What did the world that emerged in its wake look like? The course explores these fundamental questions with an emphasis on multiple explanations of the causes of the war in Asia and Europe and the contingency of Allied victory. Explores the war as both a total and a global war in which perceptions of race, class and gender shaped the experience of combatants and noncombatants, many of whom died in indiscriminate bombing campaigns. Racial ideologies also led to the brutalization of soldiers, which in turn fueled the violence against civilians, as exemplified by the Holocaust and Japanese war crimes. Finally, the course turns to the global order emerging after the war and the different narratives that emerged from it.	N	LEC	N	OPT	College of Liberal Arts and Sciences	School of Historical, Philosophical and Religious Studies	3	HUAD OR HU & H & G	Prerequisite(s): minimum 45 hours; Credit is allowed for only HST 460 or HST 494 (Introduction to World War II Studies) or HST 494 (World War II Studies) or JST 460 or WWS 460 OR Visiting University Student
WWS	561	Decision Points I	In-depth analysis of the origins, impact and controversies over the key decisions related to the beginning and early years of World War II, with an emphasis on the contingent nature of historical events.	N	LEC	N	OPT	College of Liberal Arts and Sciences	School of Historical, Philosophical and Religious Studies	3		Prerequisite(s): degree- or nondegree-seeking graduate student
WWS	562	Decision Points II	In-depth analysis of the origin, impact and controversies over the key decisions related to the later years and the ending of World War II, with an emphasis on the contingent nature of historical events. WWS	563	The Lived Experience of World War II	Using the vast oral history collection of the National World War II Museum in New Orleans, Louisiana, this course examines how individuals experienced the war. A number of factors shaped how people experienced the war--whether one was a soldier, non-combatant, resistor or collaborator. Focuses on how ordinary people made sense of their experiences during the war. In addition, students explore the theory and practice of collecting and using oral histories.	N	LEC	N	OPT	College of Liberal Arts and Sciences	School of Historical, Philosophical and Religious Studies	3		Prerequisite(s): WWS 561; WWS 562
WWS	564	The Global War	Examines the global dimensions of World War II with particular focus on those regions which have been deemphasized in Western historical discourse. WWS	566	World War II Today	Analyzes the impact and legacy of World War II, with an emphasis on the roots of contemporary problems and issues. A global conflict that impacted millions of people, World War II fundamentally reshaped the political and cultural landscape of our planet. Explores the new global order that emerged after the end of World War II in 1945. While the war had immediate impacts in the postwar era, the legacy of the war continues to inform current conflicts across the globe and resonates in the current social and political order. This is especially apparent in how contemporary narratives situate, remember and memorialize the war. Uses themes to help us think historically and uncover the historical roots of the present order.
