CTE	110	Introduction to Culture, Technology and Environment	Investigates the dominant critical perspectives about three of the most fundamental constituents of human civilization: culture, environment and technology. The attention to the interaction and interdependence between environment and technologies (old and new) has been recently rising. Brings in culture--from the biological to the mammal--as another node to the approach, helping students realize the co-existence of these aspects in our life, to see how these topics interact, and the profound influence they have on contemporary issues. After introducing various notions of culture, environment and technology, draws on concrete, hands-on and interactive case studies that epitomize how culture, environment and technology have been connected throughout human history and, indeed, have shaped the modern, technologized and globalized world in which humans and their nonhuman planet mates live today. ENG	205	Introduction to Writing, Rhetorics and Literacies	How do we understand the ways in which people in systems--both small and large--social, political, and economic, throughout the world use language and other symbolic resources to carry out work? Inquiry--that persistent, deliberate commitment to question and to build methods sufficient to that questioning--is a generative force in each of these fields of study. The goal is to strengthen your own repertoire and decision-making power for producing and circulating work (widely defined across material, print, and digital media) that matters in our risk-ridden world. ENG	390	Methods of Inquiry	Studies in writing, rhetoric and literacy are multiple and diverse because these areas deal with complicated ways people create meaning, circulate meaning, and understand meaning in a variety of contexts and a variety of modal formats. Examines ways of developing research problems and questions, designing studies and conducting, reading and evaluating research in the areas of writing, rhetoric and literacy. Qualitative methods (e.g., case study, ethnographic methods, interviewing); historical methods (e.g., archival, document analysis and artifact interpretation); rhetorical analysis and discourse analysis; feminist approaches to research and analysis; and recent advances in research in the fields of rhetoric, writing and literacy studies. Investigates the many attitudes and assumptions about creativity and cultural work that make methods of inquiry as controversial as they are significant to contemporary public life.	N	LEC	N	GNA	College of Liberal Arts and Sciences	Department of English	3	L	Prerequisite(s): ENG 102, 105, or 108 with C or better OR Visiting University Student
ENG	391	Writing in Context	How do we understand the ways in which people use written language to carry out work in professional, academic, social and/or personal contexts? How does our understanding of the ways writing is produced for an audience shift between and among these different contexts? More importantly, how do writers adapt their writing practices in order to facilitate audience understanding as well as cultivate an audience's capacity for action? Familiarize students with rhetorical practices that position them to read, assess and respond to the rhetorical demands of a wide range of writing contexts. Strengthens students' existing rhetorical skill sets and problem-setting capacities for producing and circulating work (widely defined across material, print and digital media) that responds to a range of problems in an applied manner. Assesses the rhetorical demands of writing contexts and in developing and producing tailored, audience-specific texts that forward work in complex, interdisciplinary environments. ENG	393	Theories of Literacy	While theories of literacy have, for the most part, been determined by the primacy of reading and writing script, more recent scholarship in literacy theory and history has served to challenge such limitations. Many contemporary perspectives on literacy view scripted text as one component of complex acts and practices of written communication that occur in social contexts. Studies that examine such communicative acts in their local contexts reveal that literate practices and the texts that are produced are imbued with social and cultural values and traditions and the needs and desires of individuals. As the statements above illustrate, theories of literacy themselves are embedded within the values and assumptions of individuals, institutions, and academic specialization. Examines some of these theories, their influences on academic scholarship and pedagogy, the ideological assumptions that inform them, and how we might view these theories within broader social-cultural landscapes. ENG	451	The Writer in Context or Collaboration: Interdisciplinary Study	Serves as a culminating experience and is open to writers in all genres. Bearing in mind that writers tend to make their writing lives while also doing other things--to pay the rent, to enrich the writing--this course foregrounds the interdisciplinary skills fostered by (and necessary to) a life in creative writing. Focuses on the potential relationship between writing and the visual arts. Studies multi-genre works in order to see the flexible, critical, cross-disciplinary aspects of the field and to absorb new strategies from another angle of approach. Given the increasingly image-saturated nature of 21st-century life, this particular nexus (visual and literary, image and text) seems especially relevant. In a recent lecture, Airee Dee Matthews, winner of the Yale Series of Younger Poets, author most recently of "Bread and Circus," and leader in visio-textual poetics, suggested we are already in the future that the Futurists of the early 20th century predicted, where we are being "trained to be the eye of the machine"--as well as passive purveyors of whatever the machine doles out to us. (Think: social media.) She passionately argues that only through visio-textual work can any artist fully engage a contemporary audience and draw them beyond the surfaces of our pervasive visual culture and into the "logical, emotional and political spheres of subjectivity" necessary to connection and communication. Hybrid works permit the coexistence of both lyric stillness and visual or digital discursiveness (i.e., fluidity/expansiveness), potentially offering clarity of thought in the midst of layers of observation, stimulation and paradox. How does writing anchor and deepen our experience and how does it help us to understand visual arts strategies and effects? ENG	481	Advanced Creative Nonfiction	For strong writers and impressive thinkers. Gets students thinking more deeply about their own craft choices and figuring out ways to experiment and maybe even fail in areas where they feel the weakest, while also learning how to recognize the specific quirks, talents or flairs that make them unique as a creative writer. To that end, starts with short in-class writing exercises aimed at challenging students as creative nonfiction writers and helping clarify their own writerly identity. Then launches into workshops where the goal is not to "fix" anyone's works of creative nonfiction, but instead to encourage each student to articulate and refine his or her own inner editor and critic. Students read essays, literary journalism and short memoir by established writers throughout the semester, using those as craft guides of a sort, as well as pleasure reading. Students must be active, thoughtful and respectful participants during discussions of outside essays and throughout workshops. Successful students turn in new and exciting works of creative nonfiction, ideally ones that challenge them as writers but that are written with sufficient time to revise and fine tune them before the workshop takes place. Finally, students are supportive members of the writing community in our classroom and, via the literary magazine activity, participants in the larger writer community as well. EPF	508	Education for Ecological and Social Justice	While social justice education importantly focuses on power dynamics, intercultural conviviality and action for social change, its predominant emphasis on the "social" sphere risks overlooking the embeddedness of human systems within ecological systems. At the same time, analyzing environmental issues through a social justice lens allows for deeper examination of their human dimensions and unequal impacts. Any environmental education that looks to be truly sustainable, inclusive and momentous must incorporate principles of social justice into the curricular vision and pedagogical approach. This course uses an interdisciplinary approach to examine social and environmental issues in education globally. Explores how current world events and the climate crisis intersect with socio-ecological concerns. Prepares emerging scholars to address complex, real-world problems through a holistic justice-oriented perspective. This course examines ideas and tools that position learners to envision, co-design and explore the role of education for planetary futures. Takes its theoretical framework from a radical 1960s manifesto called SCUM Manifesto by Valerie Solanas and from the French feminist philosophies of Julia Kristeva, who theorized the abject as a relationship with the grotesque that reveals the deep-seated fear of death. Uses these theoretical positions to examine trash, both abstractly and literally. Works through a variety of concepts ranging from actual trash, garbage, waste, toxic sludge, pollution and dirt, and tackles more abstract notions of trash such as the knowledge produced on the fringe in circuses, amusement parks, "trailer trash" zones, freak shows and the bodies of those marked as "Other" or different. FAS	533	Advanced Studies in Family Diversity	Emphasizes issues of diversity to better understand the context of the individual within the family and within society, with a focus on family systems theory and larger systemic issues affecting diversity, utilizing intersectionality and critical race theory. Today, families--and by extension, neighborhoods, cities, governing states and nations--are more diverse in terms of structure, culture, ethnicity, sexuality and religious/philosophical ideology, than at any other point in history. At the same time, common intrapersonal (within individuals) and interpersonal (between individuals) experiences are shared transpersonally (across groups, across cultures and across borders). Explores risk and protective factors associated with ethnoracial, physical, religious and sexual diversity, as well as resilience, prevention strategies and future directions. Atypical course in its approach to diversity issues in that it does not examine families by categorizing them into groups that are viewed as monolithic and unchanging. In this way, students should not expect to learn about "Asian Americans" or "Latinos" or "African families"; rather, students should gain an enhanced appreciation of the reciprocal influence of historical, cultural, ethnic, economic and political diversity on social interaction and constructions.	N	LEC	N	OPT	College of Liberal Arts and Sciences	Sanford School of Social and Family Dynamics	3		Prerequisite(s): degree- or nondegree-seeking graduate student; Credit is allowed for only CDE 598 (Diversity) or FAS 533 or FAS 598 (Diversity) or SOC 598 (Diversity)

In this way, an enhanced appreciation of children and their changing needs should be gained, as well as an appreciation of the issues involved in parenting. Focuses on how the major theories and empirical research findings related to parenting can have practical applications to not only parents, but also anyone working with children.	N	LEC	N	OPT	College of Liberal Arts and Sciences	Sanford School of Social and Family Dynamics	3		Prerequisite(s): degree- or nondegree-seeking graduate student; Credit is allowed for only CDE 598 (Parenting) or FAS 534 or FAS 598 (Parenting) or SOC 598 (Parenting)

FIS	201	Innovation in Society	Examines the vast implications of innovation, why it is so powerful, and why it really matters. Introduces the theories and processes of innovation as they relate to socio-political change. Students gain knowledge about the history and future of innovation and explore how innovation is entangled with social, political and ethical issues. By identifying and applying analytical tools, students learn to account for the diverse workings and effects of innovation. This course strives to debunk the myth that innovation happens automatically. Rather, different actors rally to create innovations that shape our society, economy and cultures--and that those innovations are not inevitable and could be otherwise. FIS	305	Ways of Knowing	Students research, beginning with the concept of research itself and its various purposes, highlighting knowledge and how it is created in different disciplinary approaches. Exposes historical and philosophical underpinnings of how research is conceptualized, presented and implemented, including what constitutes information, knowledge and evidence. Introduces material that is in a traditional research design and methodology course; however, the emphasis uniquely focuses on knowledge creation, innovation, the nature of disciplinary knowledge and its impact on society. Explores the epistemological differences in problem identification and approaches to inquiry in the disciplinary perspectives of engineering, the sciences and in the social sciences. FIS	307	Navigating Futures	Foresight methods and their potentials as entry-points into public discussions about near- and mid-range technoscientific developments. Four elements constitute the organizing axis of the course: (1) the history of foresight exercises in government agencies and business organizations; (2) the methods of four forms of foresight exercises (technology foresight, science and technology studies, anticipatory governance and scenario development); (3) a comparative assessment of these dominant forms; and (4) a group-based application exercise using one of the foresight methods. FIS	334	Science, Technology and Inequality	Conceptual and theoretical frameworks; provides empirical case studies that contribute to understandings of science and technology as they are used in society. The applications of science and technology in society need to be understood as instrumental to the creation and maintenance of inequality within and between societies. Science and technology does not merely cause or alleviate inequality, but are more profoundly implicated in social relations regarding distribution and access to the benefits of different technologies as well as exposure to risks from science and technology projects in society. The more pervasive and obdurate sources of social distribution are enshrined and entrenched in these scientific and technological systems. FIS	335	Designing Knowledge	Provides a foundational understanding of how social organizations make and use knowledge. From research laboratories to biotechnology companies to statistical agencies, many organizations are specifically designed to be knowledge enterprises, enterprises whose primary purpose is to produce knowledge. All organizations in modern societies also operate knowledge systems: systems whose purpose is to create, validate, circulate, communicate and apply knowledge in the making of decisions. Examines how these forms of organization work and contribute to modern societies. FIS	336	Science and Technology Policy	Science and technology are powerful forces in the modern world. They have been hailed as a way to address everything from world hunger to old age. This does not, however, happen automatically, nor does it always work out the way one presumes. Governments make numerous decisions that affect the direction and application of science and technology, and government policies are affected by a myriad of social, political, and cultural factors. This class will explore the variety of ways in which governments make these policies, how the policies shape the development of science and technology and their applications, and how policy may be shaped to create better futures. Governments around the world have coalesced around the idea that science and technology are necessary for the promotion of the good life. We will examine how they put this idea into action by looking at five interrelated topics: Food, Security/Military, Health, Economy, and Sustainability.	N	LEC	N	GNA	College of Global Futures	School for the Future of Innovation in Society	3		
FIS	337	Innovation and Global Development	Persistent inequality and poverty continue to plague nations including the USA even in the 21st century. Global development is a complex idea that attempts to address interrelated paradigms of culture, economy, equity, governance, history, societal dynamics, as well as technological issues. Using the framework of the Sustainable Development Goals 2030 (SDGs) this course examines, analyzes and critiques indicators of SDGs as well as explores innovative measures of development that nations around the world are planning and implementing in order to improve the lives of their citizens now and for the future. FIS	431	Technology, Security and Insecurity in Global Politics	Focuses on the international political aspects of technological change; examines the impact of technological innovation and political change on the international political system. The overall goal is to create an awareness of and ability to analyze and synthesize world events, the particular role of technology, and consider the myriad ways that globalization and technology as a main driver could be changing the international system of nation-states. Technological innovation often takes place within a political context, including international politics, as nation-states and other entities develop technologies within the context of competition and power. There are several issues that run throughout the course as major themes. One is the role of technology in political and social change, and the impact of the latter on the former. FIS	432	Problem Solving Through Strategic Thinking	Students learn how to ask questions, brainstorm and communicate ideas, while dealing with uncertain outcomes and unpredictable risks caused by the ideas and solutions they propose. In understanding which ideas and solutions stick and which don't, students learn how different factors influence the birth, life and death of ideas and the socio-technical systems in which ideation exists. Does it matter who asks the questions and proposes the ideas, who is trying to participate, who was there first, if there is a profit or other conflicting motive and the context and the interests that result in certain solutions being picked over others? This course uses exploration learning approaches, where students follow a progression through what they discover, from understanding who they are as individuals, to how ideas are formed and hypothesis made about proposed solutions. Since the Six Day War, 1967, and the political change in 1977, Israeli society is split in attitude toward war. The absolute belief in the political and military leaders was shaken, and new political agendas entered the political arena. FMS	423	Italian Organized Crime in Films and History	Through an analysis of historical, anthropological, literary, political and cinematic texts, explores representations of the Italian organized crime in Italian and American films from the early 20th century to today. Discovers different "Mafias" originating in Italy, but whose reach extends much further, such as the Cosa Nostra in Sicily, the Camorra in Naples, and the 'Ndrangheta in Calabria. Examines the fiction, stereotypes, myths and legends surrounding the mafia through a scrupulous analysis of some of the most important American and Italian films portraying mafia culture. FSH	331	18th- and 19th-Century European Jewelry Design	The 18th century was defined by stylish sociability that included beautiful dress, sumptuous interiors and exquisite, fashionable jewelry. Who were the influencers for jewelry design during this period? How was society defined by these ornaments? What were the rules of engagement? Did these opulent ornaments affect social strategies? How did jewelry materials evolve into more modern and recognizable forms? All of these questions are answered in this course. The cultural history of jewelry design mirrors the historical and collective customs of society from the established aristocracy, to the rising middle classes, to the expansion of cultural awareness among every world citizen when travel became widely available. So much so, that upon the turn of the 19th century, jewelry design shifted from appearing as solely a status of power and wealth to an eloquent symbol of worldly knowledge and cultural awareness.	N	LEC	N	GNA	Herberger Institute for Design and the Arts	ASU FIDM	3		Prerequisite(s): minimum 45 hours; Credit is allowed for only ARS 331 or FSH 331 or ARS 394 (18th & 19th Century European Jewelry Design) OR Visiting University Student
FSH	335	Fashion and Dress in Visual Culture	Explores fashion and dress from the Renaissance to the modern period and considers dress as commenting on society, gender, race and current events. Considers issues of style; changes in clothing production (such as brocades, cotton, silk, furs); and the function of accessories in defining identities in art. Examines fashion magazines, historical events and social change and dress as distinct from fashion. Finally, seeks to understand how art serves to heighten the meaning, display and performance of fashion in terms of the portrait subjects and the intended spectators. GSC	512	Global Trends	Takes a broad look at emerging global patterns as they relate to governance, security and social order. Examines a number of interrelated topics, including: globalization and various forms of backlash; populist movements; socioeconomic inequality both within and between societies; the shifting of economic power from the global west to the global east; demographic changes and the resource strain that results; democratic backsliding, protests and social unrest; and the weakening of state-society relations. Situates these conflicting trends within a bigger question: What does it all mean for global stability? Do these new challenges signify the erosion of an aging order, and if so, what emerges from the upheaval?	N	LEC	N	OPT	College of Liberal Arts and Sciences	School of Politics and Global Studies	3		Prerequisite(s): degree- or nondegree-seeking graduate student
GSC	550	Capstone	Serves as the culminating experience of the Masters in Global Security (MAGS). The capstone course allows each student to explore a research area, interest, theme or question. Final written products will be developed individually based on consultation with faculty. GSC	560	Overview of Cybersecurity	Provides an overview of key issues and ideas associated with cybersecurity. Each week presents a set of readings related to particular themes including: the principles of cybersecurity and the special challenges posed by an interconnected world; key elements of internet architecture; outline of cyberattacks and cyberdefense; public and private internet governance and protection; espionage; and an overview of cyberwar. Provides a general overview of questions and core concepts regarding the cyber domain, the nature and structure of the internet and how to understand the special risks, benefits, offensive and defensive elements of an increasingly interconnected world. Reviews a set of core theories, concepts and considerations to provide students who may have little background in the area and do not need any technical proficiency with a foundation for engaging the complex nature of cybersecurity and its rising significance for global security.	N	LEC	N	GNA	College of Liberal Arts and Sciences	School of Politics and Global Studies	3		Prerequisite(s): degree- or nondegree-seeking graduate student
GSC	561	Cybersecurity Threats and Trends	Provides an overview of cybersecurity threats and trends. Each week presents a set of readings related to particular themes including: an overview of hacking and data breaches; special challenges and risks associated with protecting critical infrastructure on a state and federal level; and the complex, global threats posed by cybercrime. Also explores the risks associated with rapidly expanding social media and interconnectedness currently and into the future as well as providing an overview of key legal and ethical issues associated with cybersecurity policy. Provides a general overview of these issues in an effort to outline major issues regarding cybersecurity threats and how to best think about their impact on global security. Assists students in developing a strong conceptual foundation for engaging these issues and their broad policy implications.	N	LEC	N	GNA	College of Liberal Arts and Sciences	School of Politics and Global Studies	3		Prerequisite(s): degree- or nondegree-seeking graduate student
GSC	562	Cybersecurity, Global Politics and Resiliency	Provides an overview of global cybersecurity preparation and resiliency. Because international cybersecurity threats change rapidly and because complete protection for most systems is impossible in an interconnected world, a significant amount of cyber policy focuses on improving mechanisms of preparation and enabling multiple forms of resiliency. The general idea is that attacks cannot be prevented or fully anticipated so creating more flexible, redundant and multi-faceted systems is a useful policy. Each week's readings are related to themes including: understanding core vulnerabilities, types of attackers and targets, modes of deterrence and encryption systems and tools. Engages the special challenges raised by attribution and outlines how to conceptualize and ensure system resiliency. Provides a critical overview of central ideas, concepts and terminology for better engaging of cybersecurity preparation and resiliency as a key element of global security. GSC	563	Cybersecurity Planning and Strategy	Provides an overview of cybersecurity planning and strategy. Since cybersecurity is a constantly evolving field, many aspects of planning are in a state of continual evolution. Many believe that broad-based, flexible strategies are necessary to enable key actors and institutions to engage in adequate policies to ensure general cybersecurity preparedness. Class themes include: an overview of key institutions and actors, central concepts of threat analysis, public and private cyberpolicy, and elements of international regulation. Also engages issues of cybersecurity strategy, the special challenges of non-state actors and ways to conceptualize and engage the future of cybersecurity. Reviews essential ideas and concepts, gains familiarity with key actors and institutions, and engages the complex interplay of governmental, intergovernmental, commercial and non-state actors engaged in cyber threats and protective action. GSC	571	Narrative Conflict	Influence is an often overlooked and yet central aspect of warfare. The participants with the most information or the most accurate data will not necessarily have the most influence. The participant with the most robust narrative will have the most influence. Explores the narrative space as the contested space. Narrative conflict is not an ideological battle nor is it information warfare. Narrative conflict is conflict over the meaning of information. GSC	572	Proxy Warfare, Strategic Thinking, History and Operational Arts	Explores the strategic theory, history and operational art of borrowing armies to fight in another country's civil war, and the use of coercive diplomacy and irregular warfare to shape military and diplomatic outcomes. Draws on Cold War history and contemporary case studies of U.S. and Russian proxy strategy in Korea, Afghanistan, Ukraine and Syria. Also grapples with the puzzles of principal-agent dynamics, coercive diplomacy, secrecy, deception and political warfare. Examines how changes in technology have shaped proxy wars in the past and how they are likely to shape such conflicts in the near future. GSC	573	Understanding Great Power Competition	Reexamines the interplay of war and peace during the era of the modern nation-state with particular attention to the last two decades. Adopts a theory-history-practice approach, employing the current concept used by the U.S. Department of Defense in framing great power competition for strategic study and operational praxis. Using this competition-continuum framework of analysis, explores the present era as a global strategic inflection point crossing into great power competition. GTD	511	Development Policy and Practices	Since the Bretton Woods Agreements in 1944, enormous energy has been devoted to generating the right tools for global development policy. Yet, little attention is given to the relationship between these tools, the practice of development and actual outcomes. At best, it is understood as a "gap" between the theory of development policy and practices. There is no reflection on what the good development policy looks like or what collective learning we have thus far. Informs students on the complexity of policy making and its relationship to development practices through time. Creates an intellectual space to discuss the practices of global development; uses case studies to enhance students' creativity and skill needed in managing and negotiating critical development challenges. Approaches development policy (models, strategies and project design) primarily as a tool to legitimize power relation rather than to orient practice for desired development outcomes. HEB	349	Israeli Wars in Israeli Movies	From its first day, the State of Israel has been in a state of war with the Arab countries. Every few years, the fighting erupted into an open war. At the beginning of the country, there was a consensus that the wars were forced on the Israelis, and therefore, the heavy toll on human life was unavoidable. Since the Six Day War, 1967, and the political change in 1977, Israeli society is split in attitude toward war. The absolute belief in the political and military leaders was shaken, and new political agendas entered the political arena. To this divided society, the Intifadas occurred with the waves of terrorism. These events added fire to the heated debates in Israel. One means of expression is through the cinema. In this course, students watch, analyze, and discuss selected movies on the Israeli wars and terrorism in the streets of Israel. Through these movies, produced by Israelis, we'll try to understand the mood and attitude of the Israelis toward war, enemies, and political and military leaders. HSD	540	Responsible Innovation and Research	Responsible Innovation (RI) and Research is a vision of how values can best be incorporated into the practice of science, technology and innovation (STI). It touches on a host of other similar concepts like Public Interest Technology, Tech for Good, Just Tech and others. At their core, RI and its cognates understand that STI is not a value-free endeavor, and thus it is better to recognize those values and work with them to help assure that our investments in STI are attuned to the goals of science policy as well as to broader public values and the pursuit of a more just, democratic society. Emphasize bringing students to the forefront of the emerging scholarship around RI and related concepts, including perspectives grounded in justice, equity, diversity and inclusion; communicating with colleagues and publics about values and RI in the practice of STI; and performing a real-world project, inquiry or intervention around RI. HSD	550	Prototyping Futures	In this project-based course, students work in interdisciplinary teams to explore and envision the future of communities, industries, technologies and other elements of our society. In this process, students develop their understanding of the application of extended reality technologies, practices and methodologies for design, and tools for applying research to constructing prototypical scenarios for the future, in addition to gaining experience in effective collaboration. This course is about critical, methodological and narrative skills--the ability to move fluidly through domains, create low-fidelity prototypes, and devise creative solutions to complex problems by envisioning new realities. The development of deep technical skills in a chosen field follows in each program. HSD	551	Future-Focused Research Methods	In times of discontinuous change, deep ambiguity and high levels of novelty, the future is characterized by radical uncertainty. Making decisions, choosing policies or organizing community action is complicated by the range of complex potential futures in play. As researchers and practitioners concerned with socio-technical change, what are the tools and methods to grapple with and make sense of uncertainty? This class surveys the field of foresight, drawing from a broad array of scholarly traditions, to catalogue the different methodological approaches to navigate change. Looks to scholars who approach the sociology of time, the dynamics of socio-technical systems, innovation studies, social psychology and futures studies to explore the concept of the future with an eye toward the implications for research methods. Utilizes different ways of thinking about the future to support and develop cognitive, social and organizational capacities to imagine and enact different futures. In doing so, the epistemology of the future is foregrounded, probing the nature and consequences of anticipatory knowledge production. HSD	552	Worldbuilding and Imagination	To make a convincing future, you need to create a convincing world. Storytellers, artists, game designers, politicians and scientists all engage in the practice of building worlds in order to inspire, to question, and sometimes to terrify us. They create narratives, experiences and simulations of places, real and imagined, that combine scientific, cultural and aesthetic forms of knowledge. Why? This course explores the theory and practice of worldbuilding as a way to time travel to the future and the past, as well as to other configurations of the present. It also allows us to better understand the systems we live in and define plans of action to change them for the better. In this way, worldbuilding is a way to create collective visions for the future that inspire change today. Students study a variety of future worlds and build their own through collaborative projects that involve writing, making and public engagement. HSD	555	Strategic Design Futures	Designers are increasingly addressing more strategic and long-term situations, while non-designers are increasingly interested in using design approaches to address diverse challenges. Strategic design is a practice that focuses on formulating strategies (problem setting) rather than only implementing strategies (problem solving). Strategic design is closely related to contemporary and emergent design practices such as user experience design, design thinking, service design, speculative design, behavioral design, and co-design, which are increasingly explored, adopted and adapted in projects and organizations. Students understand and practice a variety of strategic design methods and mindsets with the aim of changing and envisioning futures. With hands-on activities and real-world context, students use and develop core strategic design skills such as visualization, sensemaking, synthesis, speculation and facilitation. Some design tools that may be used include storyboards, user flows, journey mapping, participatory ideation, visioning, service blueprints, prototyping-testing. Includes seminar discussions and hands-on activities with a "live project." HST	404	Conquest and Encounters in Colonial Latin America	How did Hernan Cortés and Francisco Pizarro defeat the Aztec and Inca Empires? Despite numeric inferiority, limited provisions, and little knowledge about the Americas, Cortés and Pizarro defeated advanced civilizations that had experienced warriors and millions of inhabitants. Possible explanations include the conquistador's valor, advanced weaponry, superior military strategy, Indian allies, and biological attacks. In their encounters with native peoples of the Americas, Europeans were not always conquerors. Álvar Núñez Cabeza de Vaca and Lope de Aguirre failed both in their attempt to conquer a large Indian civilization and in their effort to find mineral wealth. A few Europeans such as Bartolomé de Las Casas spoke out against the abuses committed against the Indians during the conquest. Explores these issues from the perspective of both Europeans and native peoples and looks at the long-term impact for Latin America and its peoples. HST	460	World War II	Explores the causes, conduct and consequences of World War II. When did World War II start? How was it fought, and what did that mean for soldiers, the homefront and millions of civilians in Japanese or German occupied regions? What did the world that emerged in its wake look like? The course explores these fundamental questions with an emphasis on multiple explanations of the causes of the war in Asia and Europe and the contingency of Allied victory. Explores the war as both a total and a global war in which perceptions of race, class and gender shaped the experience of combatants and noncombatants, many of whom died in indiscriminate bombing campaigns. Racial ideologies also led to the brutalization of soldiers, which in turn fueled the violence against civilians, as exemplified by the Holocaust and Japanese war crimes. Finally, the course turns to the global order emerging after the war and the different narratives that emerged from it.
